Their compact size and front panel controls make them easy-to-use. The 900 Series has proven to be a popular and affordably priced solution to signal conditioning applications.

FREQUENCY DEVICES ALSO OFFERS A BROAD LINE OF SIGNAL CONDITIONING COMPONENTS:
• Anti-Alias Filters • Programmable Filters • Telecom Filters • Programmable Amplifiers • Differential Buffers • Oscillators

25 LOCUST STREET, HAVERHILL, MA 01830 TEL: (508) 374-0761 • FAX (508) 521-1839

FREQUENCY DEVICES™

ANTI-ALIAS FILTERS

800 SERIES PRECISION DIGITALLY PROGRAMMABLE FILTER MODULES

FEATURES
- Phase/Gain Matched
- Low (90dB typ) Distortion
- Wide (100dB typ) Dynamic Range
- Extremely Steep Roll-Off
- 8-Bit Digitally Programmable Corner Frequency
- Internally Latched Data Lines to Store Frequency Selection Data

- Popular Transfer Characteristics for Broadest Application Scope
- Plug-in, Ready-to-Use, Fully Finished Filter Component
- Programmable from 0.1 Hz to 50 KHz

The *800 SERIES* are digitally programmable active filters, tunable over a 256:1 frequency range. These units contain 8 bits CMOS clocked "D" latches which can be digitally configured to operate in any one of three modes. Each unit is available with any one of five standard factory-set tuning ranges or 8-bit custom ranges. The 800 Series consists of the *848 Low-pass 8-Pole filters. 878 High-pass 8-pole filters, 844 Low-pass 4-pole filters, and 874 High-pass 4-pole filters.* All 800 Series models are fully finished, matched filters that require no external components or adjustments.

8-POLE MODELS

Low-pass (848 Series)
- Butterworth.....848P8B
- Linear Phase.....848DOW
- Bessel.....848P8L
- Elliptic.....848P8E

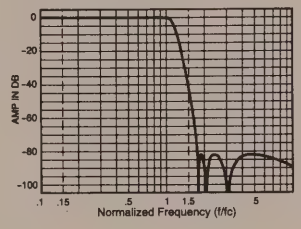
High-pass (878 Series)
- Butterworth.....878P8B
- Elliptic.....878P8E

4-POLE MODELS

Low-pass (844 Series)
- Butterworth.....844P8B
- Tschebychev.....844P8Y
- Bessel.....844P8L

High-pass (874 Series)
- Butterworth.....874P8B
- Tschebychev.....874P8Y

848 ELLIPTIC



D68 SERIES LINEAR ACTIVE FILTERS

FEATURES
- Compact size minimizes board space requirements
- Plug-in ready-to-use, reducing engineering design and manufacturing cycle time
- Factory tuned, no external clocks or adjustments needed
- Low harmonic distortion and wide signal-to-noise ratio to 16 bit resolution
- Broad range of transfer characteristics and corner frequencies to meet a wide range of applications

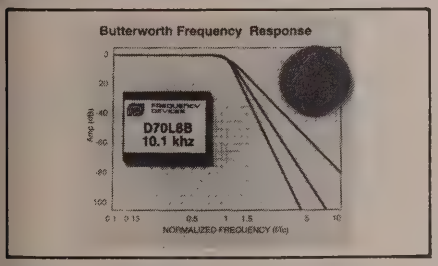
The *D68 SERIES* of small, fixed-frequency, precision active filters provides high-performance linear, multi-pole filtering in a compact package, with a broad range of corner frequencies and a choice of transfer functions. Individual D68 filters can serve in low pass or high pass applications or be combined to create custom band-pass or band-reject filters. Each model comes factory tuned to a user-specified corner frequency between 10Hz and 100kHz. These fully self-contained units require no external components or adjustments. They operate with low total harmonic distortion over a wide dynamic input voltage range from non-critical ±5V to ±18V power supplies.

AVAILABLE LOW-PASS MODELS
- D68L8B .....8-pole Butterworth
- D68L8E.....8-pole, 6 zero elliptic
- D68L8L.....8-pole Bessel
- D68L8D .....8-pole, 6 zero constant delay

AVAILABLE HIGH-PASS MODELS
- D68H8B.....8-pole Butterworth
- D68H8E .....8-pole, 6 zero elliptic

General Specifications
Pin-out/package data & ordering information

D70 SERIES LINEAR ACTIVE DIP FILTERS

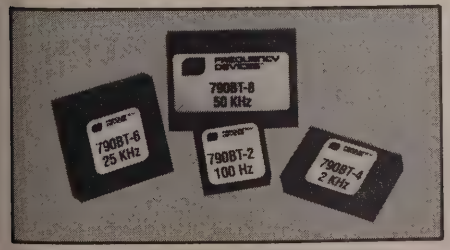


FEATURES
- Compact Dual In-Line Packaging
- Low (90dB typ) Distortion
- *Wide (100dB typ) Dynamic Range*
- User Specified Corner Frequency between 500 Hz and 50 kHz
- Plug-in, Ready-to-Use

The *D70 SERIES* of fixed-frequency linear active DIP filters offer a unique combination of small size and high performance. These Butterworth and Bessel low-pass filters combine the excellent performance of linear multi-pole filter design with the space saving of the dual in-line package (DIP). The D70 family of fully finished filters requires no external clocks, components or adjustments.

AVAILABLE LOW-PASS MODELS
- D70L8B .....8-pole Butterworth
- D70L6B .....6-pole Butterworth
- D70L4B .....4-pole Butterworth
- D70L8L.....8-pole Bessel
- D70L6L.....6-pole Bessel
- D70L4L.....4-pole Bessel

790 SERIES MATCHED LOW-PASS ACTIVE FILTERS



FEATURES
- 2-, 4-, 6-, & 8-Pole Low-pass Models
- Butterworth and Bessel Models
- Models for Matched Gain and Phase: General-Purpose: and Low-Power

The Frequency Devices *790 SERIES* are fixed-frequency low-pass active filters that meet a wide variety of price/performance requirements. Available in a wide choice of 64 basic models, this family offers the user 2-, 4-, 6-, or 8-pole Butterworth or Bessel transfer characteristics factory-tuned to user specified frequencies from 100 Hz to 50 KHz. Gain-and phase-matched to theoretical by precise tuning, 790 and 791 Models are ideal for critical multi-channel data acquisition pre-filtering. Economical and cost effective, the 792/3/4/5 models offer 32 basic active filter models. Low power consumption (down to 15µW) ideally suits 796/797 models for many types of battery-powered applications.

MODELS
All-Available in Butterworth or Bessel Response Curves, 2, 4, 6, or 8 Poles:
- Matched Gain and Phase 790/791
- General Purpose/Low-Cost.....792/795
- Low-Power Consumption 796/797

MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination*. This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float*. Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof*. May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card*. The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement*.

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage*. Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage*. The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

KAPPA® TECHNOLOGIES INC.

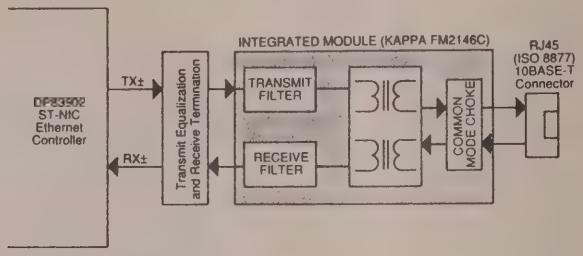
10BaseT Ethernet
Integrated Filter Modules

Features

- IEEE 802.3 compliant for 10BaseT
- 7-pole Transmit and 5-pole Receive Balanced Filters
- 2000Vrms Input-to-Output Isolation
- Matched to all major transceiver chip sets
- 16-pin DIL and SMD package options
- Common-mode chokes for EMI/RFI compliance

Typical Application

Ethernet (10BaseT) Typical Connection to Twisted-Pair



NOTES:
1/ "DP83902" is a National Semiconductor Ethernet Controller.

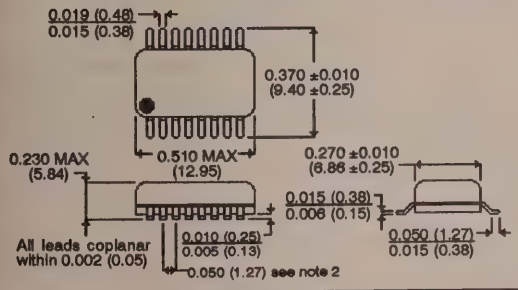
(*) Insert package code: "D" = SOIC SMD (.050" pitch); "GW" = Wide-body SMD (.100" pitch); "S" = SIP; "W" = Wide-body DIL

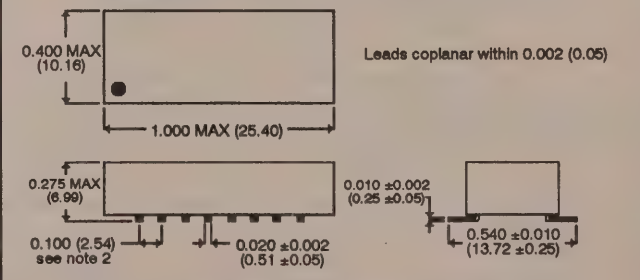
Notes to RATINGS:
[1] Referenced to the output level at 5MHz.
[2] Insertion Loss figures do NOT include losses due to pre-emphasis resistors.
[3] Refer to the **Schematics** and **Package Outlines** sections for details on package availability for each part.
[4] Units without common-mode chokes have a Common- to Differential-mode Rejection of -15db minimum from 1-100MHz.

Package Outlines

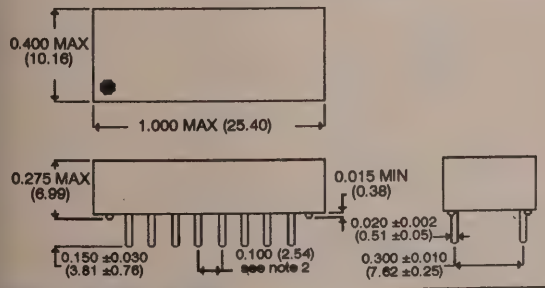
16-pin SOIC Gull-Wing SMD (0.050" pitch)



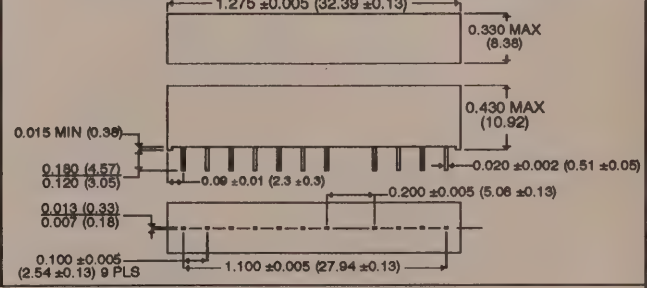
16-pin Wide-body Gull-Wing SMD (0.100" pitch)



16-pin Dual-In-Line



12-pin SIP (FM2166S, FM2170S and FM2172S only)



Notes to Package Outlines:
1. Dimensions are expressed in inches (mm).
2. Lead spacing shall be measured within this zone.
   a. Shoulder and lead tip dimensions are to centerline of leads.
3. Tolerance non-cumulative.
4. Lead Mtl: Alloy 42 per ASTM F-30 or equiv., electrotin-plated per MIL-T-10727.
5. Body Material: Plastic (epoxy or Diallyl Phthalate).
6. Round emboss in bottom-left corner, or notch on left end, denote lead no. 1
7. Body dimensions do not include molding flash which shall be ≤0.006 (0.15).
8. Each lead is within ±0.010 (±0.25) radius of its true position at max. mtl dimension.
9. Unit marking includes mfr's name, part number, date code and index mark.

KAPPA® TECHNOLOGIES INC.

Token Ring
Interface Filter Modules

General Description

Kappa's Token Ring Interface Filter Modules provide all of the necessary magnetics, including electrical isolation transformers and waveform-shaping filters, for a complete Ring Interface circuit when combined with a front-end semiconductor (such as Texas Instruments' TMS38053 or TMS38054) and the appropriate external components (see Kappa Application Note AN-931).

The **FM2174** filter provides the appropriate impedance-matching transformer, LC filter and common-mode choke for connecting to 150Ω shielded twisted-pair ("STP") data-grade media.

The **FM2175** filter is the same as FM2174 except it provides connectivity to either 150Ω STP or 100Ω unshielded twisted-pair ("UTP") cabling.

Features

- IEEE 802.5 compliance
- Both Transmit and Receive filters in one package
- 16-pin DIL and SMD package options
- Available in 150Ω STP version (FM2174), or both 150Ω STP and 100Ω UTP version(FM2175)
- Common-mode chokes for EMI/RFI filtering

Typical Application

TMS38053 or TMS38054 Application Circuit

For use in sonar and other multi-channel systems	To correct sytem introduced delay and attenuation distortion. Computer designed from system error curve.

KR Electronics can quickly and accurately design networks to meet your requirements and provide an immediate quotation. Computers are extensively used by our engineers to find the most cost effective solutions which satisfy your system needs. Through the use of circuit analysis programs these networks are evaluated to assure compliance with your specifications. Graphical and tabular data can be generated and supplied to illustrate typical network response. This data can be used to predict system performance.

- Application Assistance
- Immediate Quotation
- Custom and Standard
- MIL-F-18327
- Prototype Service

Thorough analysis of the design before production is used to check all applicable network parameters.

- Attenuation
- Phase/Group Delay
- Impedance
- Transient Response
- Network Sensitivity
- Temperature Analysis

Computer controlled network analyzers assure accurate and repeatable measurements. Automated equipment 100% tests all products, verifying compliance to your specifications.

- 100% Electrical Inspection
- Graphical & Tabular Data
- Attenuation
- Phase/Group Delay
- VSWR/Return Loss
- Impedance

Some of KR's specialized design software include:

- Optimization and design of attenuation equalizers to correct for a prescribed frequency characteristic
- Design of group delay equalized filters yielding constant group delay and linear phase
- Optimization and design of group delay equalizers to correct for a prescribed frequency characteristic

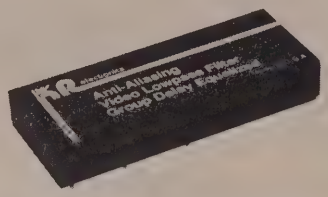
VIDEO & ANTI-ALIASING FILTERS



- Miniature
- Group Delay Equalized
- SIN(X)/X Compensation
- Custom Configurations

Designed and manufactured to meet the stringent requirements of analog and digital video systems, KR Electronics' group delay equalized lowpass filters are optimized for performance and size.

Typical transitions from the end of the passband to the start of the stopband range from 1.3 to 1.8 Group delay equalization is used to practically eliminate phase distortion. Flat amplitude response is exhibited up to the end of the passband.

These filters are ideally suited for anti-aliasing in A/D and D/A applications. For filters used after D/A conversion, Sin(X)/X shaping of the passband is available.

KR Electronics has a strong background in custom design and manufacture. This gives you the flexibility to specify the frequency, shape factor and package configuration that meet your particular requirement.

NEW IEEE-488 PROGRAMMABLE FLEXI-FILTER FAMILY

Filter Types: Butterworth, Bessel and Chebyshev
Frequency Range: 0.1Hz to 200kHz (Option 002: 0.001Hz operation)
Attenuation Slope: Selectable to 78dB/octave
Multiple Modes: LP, HP, BP, BR and Amplifier Only
Input and Output: Differential or Single-Ended
Stopband Attenuation: >80dB
Input Gain: 0dB to 40dB
Output Gain: – 10dB to 40dB

Military Filters

FOR ADDITIONAL INFORMATION SEE OUR DATA PAGES IN THE CONNECTOR SECTION, VOLUME C PAGES C•1456 - C•1459

Shown below are a few of the most commonly used Military approved filters. These filters are approved to MIL-F-15733. Metuchen Capacitors stocks several hundred different MIL-F-15733 filters from MIL-F-15733/23 thru MIL-F-15733/70. Those shown below are IN STOCK continuously and offer a wide selection for your various applications. Both hermetic and non-hermetic (resin seal) are listed as well as different electrical configurations—L's and A's and Voltages from 50 VDC to 125 VAC.

ECONOMICAL PASS BAND FILTERS

IN STOCK

FOR ADDITIONAL INFORMATION SEE OUR DATA PAGES IN THE CONNECTOR SECTION VOLUME C PAGES C•1456 - C•1459

Spectrum designs and manufactures a variety of pass band filters for featuring low loss and a virtually flat pass band and high performance in the reject band. These filters are excellent performers for data transmission networks.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A
A/D acrylonitrile butadiene-styrene
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AFC audio frequency control
AFT automatic filter test
ALGOL algorithmic language
AM a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
ASIC application specific IC
ATE automatic test equipment
ATG automatic test generation
AWG American wire gauge

B
BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility syste

C
CAD computer-aided design
CAE computer-aided engineering
CAM computer-aided manufacture
CAMAC computer-automated measurement and control
CAPP computer-aided process planning
CAT computer-aided test
CATV cable television or community antenna television
CCC (leaded) ceramic chip carriers
CCD computer-controlled display
CERMET ceramic metal element
CIE computer-integrated engineering
CIM computer-integrated manufacturing
CLCC ceramic leadless chip carriers
CMOS complementary metal-oxide semiconductor
Comm. communications
CPS characters per second
CPU central processing unit

D
D/A digital to analog
DAC digital to analog converter
DBMS data base management system
DC direct current
DFT design for testability
DIAC bidirectional trigger diode
DIL dual in-line
DIN Deutsche Industrie Normenausschuss
DIP dual in-line package
DPM digital panel meter
DRAM dynamic RAM
DTL diode transistor logic

E
EDA electronic design automation
EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EIA Electronic Industries Association
EMC electromagnetic compatibility
EMI electromagnetic interference
EMP electromagnetic pulse
EPROM erasable programmable ROM
ESR equivalent series resistance

F
FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G
GaAsFET gallium arsenide FET
CMIP commn management information protocol
GPIB general purpose interface bus
GPS global positioning system

H
HF high frequency (3 to 30 MHz)
HIPOT test, measurement, and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I
IAB Internet Activities Board
IC integrated circuit
IDC insulation displacement contact
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared
ISDN integrated services digital network
ISO International Standards Organization

J
JEDEC Joint Electronic Device Engineering Council
JFET junction FET
JMOS junction MOS

K
kHz kilohertz (10^3 hertz)
KSR keyboard send /receive

L
LAN local area network
LC (filters) inductance/capacitance
LCC leaded chip carrier
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LIF low insertion force
LNA low noise amplifier
LNB low noise band
LSI large scale integration
LVDT linear velocity displacement transformer

M
MASER microwave amplification by stimulated emission of radiation
MATV master antenna television
µF microfarad
MHz megahertz
MIC microwave IC
MIPS million instructions per second
MIB microcomputer interface board
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor FET
MOSIGT metal oxide semiconductor insulated-gate transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N
NBS National Bureau of Standards
NEMP nuclear electromagnetic pulse
NIM national instrumentation module
NOR not OR
NTC negative temperature coefficient

O
OCR optical character reader
OEM original equipment manufacturer
OR a logical operator
OSI open systems interconnection

P
PAL programmable array logic
PC printed circuit
PCB printed circuit board
PCM pulse code modulation
PCS plastic clad silica
pF picofarad
PGA pin grid array
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PLCC plastic leaded chip carrier
PLL phased lock loop
PPI plan position indicator
PROM programmable ROM
PTC positive temperature coefficient
PUT programmable unijunction transistor

Q
QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R
RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S
SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SCS silicon-controlled switch
SDA source & detector assemblies
SGMP simple gateway monitoring protocol
SIDAC bidirectional voltage-triggered switch
SIMM single in-line memory module
SIP single in-line package
SMD surface mount device
SMT surface mount technology
SNMP simpole network management protocol
SO small outline
SOIC small outline IC
SOT small outline transistor
SSI small scale integration
SSR solid-state relay
STL Schottky transistor logic
SUS silicon unilateral switch

T
TC temperature coefficient
TCE thermal coefficient of expansion
TXCO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC bidirectional AC switch
TTL transistor-transistor logic
TTY teletypewriter

U
UHF ultra high frequency (300 MHz to 3 GHz)
UJT silicon unijunction transistor
UL Underwriters Laboratory
UPS uninterruptible power supply

V
VAC volts (of) alternating current
VAN value-added network
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency (30 kHz to 300 MHz)
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VME virtual machine environment
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W
WPS word processing software

Y
YIG yttrium iron garnet

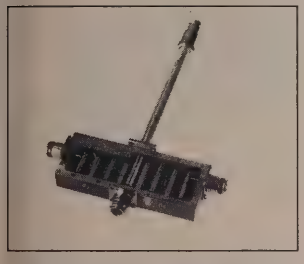
Z
ZIF zero insertion force

FILTERS FOR 5 Hz - 26 GHz

INNOVATION & SERVICE FOR OVER 25 YEARS

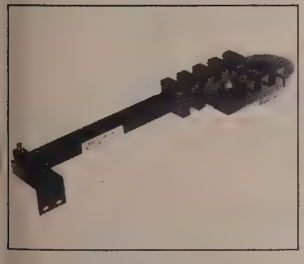
Subminiature Filters

Diplexer/Combiner 10 KHz Hi/Lo Pass

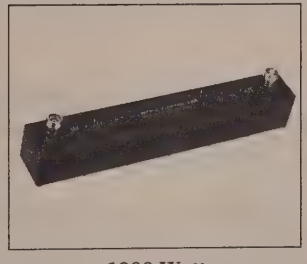


Triplexer: VHF Low Pass Filter & 2 Microwave Bandpass Filters

Stripline Filter Network



Waveguide Filter Network



1000 Watt Low Pass Filter 150 MHz

Microwave Filter Company, Inc. offers a wide range of products to meet custom or standard requirements for small or large program orders. The addition of Chesterfield Products in 1992 further expanded its capability to include custom LC filters for 5 Hz to 1 GHz and subminiature filters for 20 MHz to 1 GHz.

MFC's reputation for quick service resides in its ability to quote quickly and supply custom filters in as little as 3 days. Supporting its reputation, is the latest technology in simulation, design and test equipment, and a high level of quality assurance, including conformance to such military standards as MIL-I-45208 and MIL-STD-2000 to insure the reliability of all products.

MFC makes filters for all applications in RF & Microwave including:

CATV, SMATV, In-House TV/LAN, Satellite, LPTV, FM/TV Broadcast, Mobile Radio, Microwave TV (ITFS/MMDS), RF/MW Communications, Radar, Navigation, Electronic Warfare, Medical/Physics Research

FILTER SPECIALTIES

- Bandpass
- High Pass
- Low Pass
- Bandstop
- Multiplexers
- Tunable Notch
- Tunable Bandpass
- High Power Filters
- Filter Networks
- Couplers
- Amplitude Equalized
- Delay Equalized
- Microwave Absorbers

FILTER DESIGNS

- Waveguide
- Stripline/Microstrip
- Transmission Line
- Miniature/Subminiature
- Lumped Constant
- Crystal

For more information, ask for a full MFC LITERATURE PACKAGE.

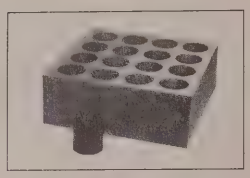
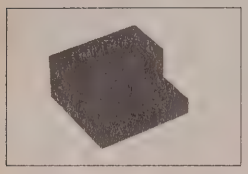
FERROSORB™ MICROWAVE ABSORBERS

MATERIAL & ELEMENTS FOR COAXIAL WAVEGUIDE CIRCUITS

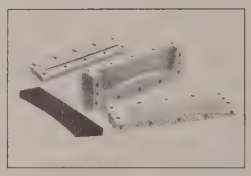
Rigid Machinable Shapes



FERROFLOW™ Cures (Magnetic) Rigid



CARBOFLOW™ Cures (Non-Magnetic) Rigid



FLEXFLOW™ Cures (Magnetic) Flexible

FERROSORB™ is used to fabricate terminations, attenuators or spurious energy suppressors 1-26 GHz by casting or machining:

• RIGID, machinable stock comes in plates, rods and square or rectangular bars. Loads, terminations and other custom products are also available.

• FERROFLOW™ and CARBOFLOW™ are two part casting systems to produce rigid magnetic and non-magnetic parts.

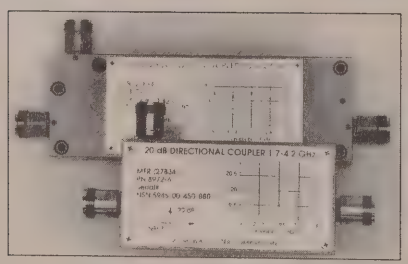
• Two part system FLEXFLOW™ produces flexible parts such as gaskets for double duty: sealing against moisture and RF leakage.

CATALOG F/81 describes these materials in detail: physical properties to machine and cast - including mold design. It also includes a design section for specifying a variety of other absorber shapes and styles.

For more information, ask for CATALOG F/81.

COUPLERS

COAXIAL COUPLERS FOR OCTAVE BANDWIDTHS 225 MHz TO 12 GHz
WAVEGUIDE COUPLERS FOR 2.2 GHz TO 22 GHz



Models 8972-1 and 8972-6 (30 and 20 dB Directional Couplers)

• ***SINGLE SECTION TRANSMISSION LINE:***
Offers frequency sensitivity of ± 1 dB using single quarter wave coupled lines.

• ***TWO SECTION TRANSMISSION LINE:***
Constructed with 2 quarter wave coupled lines providing flatter frequency sensitivity ± 0.2 dB across a slightly wider band.

• ***STRIPLINE:***
For lower cost and smaller construction.

• ***WAVEGUIDE CROSSGUIDE:***
Provides lowest insertion loss and highest power handling.

Custom designs are available, vigorously tested to military, environmental and quality assurance specifications, with special connector configurations to meet your needs.

For more information, ask for the COUPLER data sheet.

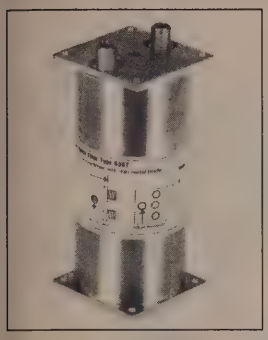
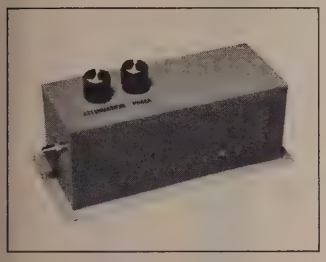
RF FILTERS FOR INTERFERENCE SUPPRESSION

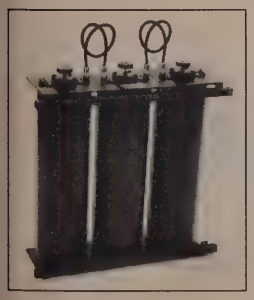


Model 6367
Tunable Notch Filter



Model 2903
Phase Canceler

Model 9603
High Q Notch Filter



Model 9393
High Q Bandpass Filter

TUNABLE NOTCH FILTERS 22-900 MHz

For suppression of harmonics and other unwanted carriers in electronic systems.

- 3 dB bandwidth adjustment 1-5 MHz typical.
- Notch depth dependent on 3 dB bandwidth and frequency (20 dB typical).
- Low power applications (<10 watts).

For more information, ask for CATALOG RF/88.

PHASE CANCELER 54-890 MHz

Suppresses interference which occurs at the same frequency as the desired signal, or which appears so close to it that application of filters is impractical.

Eliminates such interference as:

- Co-Channel
- Ghosting
- Harmonics
- Channel Overload
- Sideband Emissions
- Wideband Digital Terrestrial
- Strong Analog Terrestrial Carriers
- Co-Location of Transmitters

For more information, ask for CATALOG IPC/92.

HIGH Q NOTCH FILTERS 30-950 MHz

Designed for low loss applications for removing interfering carriers that cause intermodulation.

- Bandwidth: up to 3% bandwidth/center frequency.
- Phased together or cascaded, filter cavities can be combined to increase attenuation at a spot frequency or across a wider band.
- Excellent power handling and temperature stability.

For more information, ask for a HIGH Q NOTCH FILTER data sheet.

HIGH Q BANDPASS FILTERS 30-950 MHz

For multiplexing, preselecting and eliminating unwanted spurious transmit signals.

- Single, double and triple cavity models available.
- Temperature stable.
- Quarter wave cavities in a variety of diameters are available for increased Q, selectivity and low loss.

For more information, ask for a HIGH Q BANDPASS FILTER data sheet.

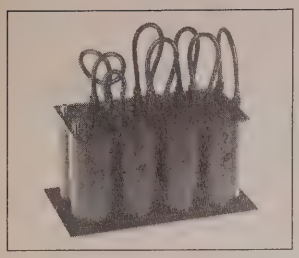
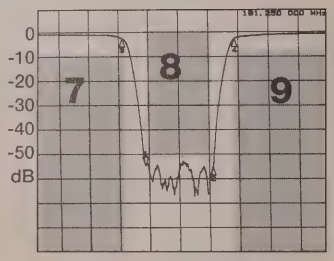
"BRICKWALL" TV CHANNEL DELETION FILTERS

FOR NEW DATA/PROGRAM INSERTION



Single Channel
Hyperband 3271 ABY-FF



Single Channel 50 dB Stopband, Leaves Adjacents in Service 3271ABH-8

The "Brickwall" Deletion Filter line allows new spectrum allocation without sacrificing channels as guard bands. For CATV, SMATV, Security, In-House TV and Broadband Systems.

For any channel or groups of channels and special networks 5-806 MHz sub, low, FM, mid, super, hyper and UHF.

APPLICATIONS

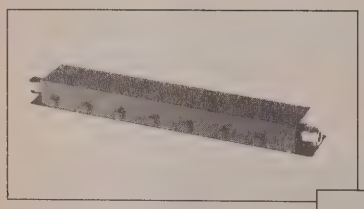
- Single Channel
- Low Pass/High Pass Enhancement
- Multiple Channel Deletion
- Broadband Sweeps

NETWORKS

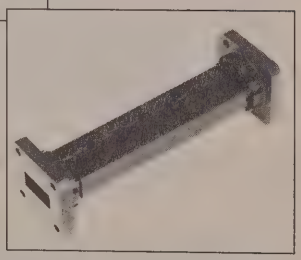
- Closed Circuit
- Batch Rescramble
- Batch Descramble
- Batch Convert

For more information, ask for CATALOG SUPERNOTCHER/91.

BANDPASS FILTERS 5 MHz-18 GHz



Sharp 3303 for Channels in Sub, Lo, Mid, Hi and Super Bands



CARS Band Channel or Full Band BPF

APPLICATIONS

- Modulator Noise
- Agile Modulator Clean-up
- Off Air Interference
- Processor Protection
- Receive Isolation
- Adjacent Cut-Off
- FM Channel Isolation
- Pole Mountable
- Sniffer Preselection
- CARS Band
- Single Pay TV Channel
- TVRO Block Preselection
- System Noise Test
- Wideband: Low VHF Band, Midband, Hi VHF Band

FILTER TYPES

- Helical Resonator
- Combline
- Cavities
- Lumped Constant
- Interdigital
- Waveguide
- Stripline

For more information, ask for CATALOG C/91.

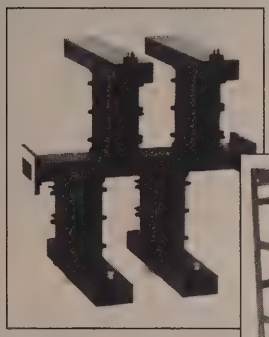
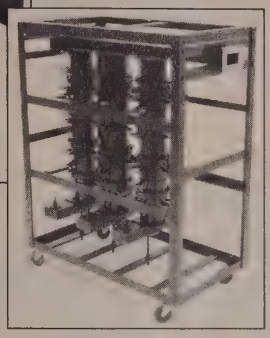
CHANNEL COMBINERS, ANTENNAS & ACCESSORIES

FOR MDS, MMDS AND ITFS



Model 9000
Non-Adjacent
Channel Combiner



Model 9500
Adjacent Channel
Combiner

Model 9778
Relay Antenna

MODEL 9500

Combines 4 adjacent channels to a common antenna line, with minimum impact in insertion loss (<2.0 dB), while maintaining high isolation between channels.

MODEL 9000

Has a loss of 0.7 dB or less, insuring minimum power loss and optimum broadcast range. Up to 16 non-adjacent channels can be combined to a common antenna line.

The bandwidth of both units accommodates NTSC, PAL and SECAM formats.

Accessories:
- Coax to Waveguide Adaptors
- Directional Couplers
- Filters
- Termination Plates
- Audio Video Diplexer

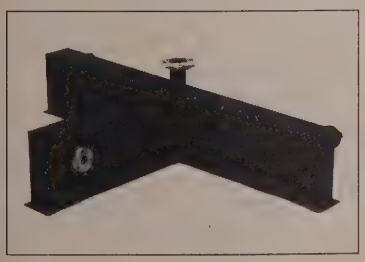
MMDS RELAY ANTENNA 2.5 TO 2.7 GHz

Allows MMDS operators to fill nulls in their primary pattern with the widest beamwidth available on the market.
- Widebeam (100° typical pattern).
- 21 - 24 dBi gain
- Performance is tested and guaranteed.

For more information, ask for BULLETIN 9500.

CHANNEL COMBINERS/FILTERS FOR LPTV/TRANSLATORS

FOR VHF AND UHF LOW POWER APPLICATIONS



Model 6464
UHF Channel
Combiner

- Sideband Suppression Filters
- Interference Filters for Broadcast Off Air & TVRO
- Channel Combiners
- Channel Bandpass Filters
- Harmonic Suppression Filters
- Filters for Combining Station Ancillary Frequency Bands
- TV Channel Security

For more information, ask for CATALOG LPTV/91!

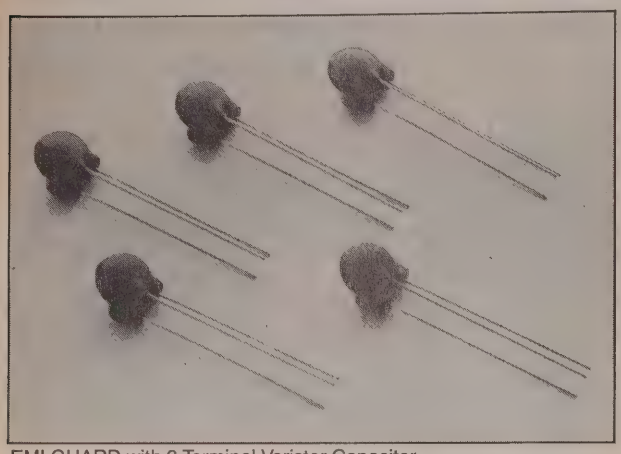
EMI/RFI SUPPRESSION FILTERS

MURATA ERIE NORTH AMERICA



EMI-GUARD with 3 Terminal Varistor-Capacitor

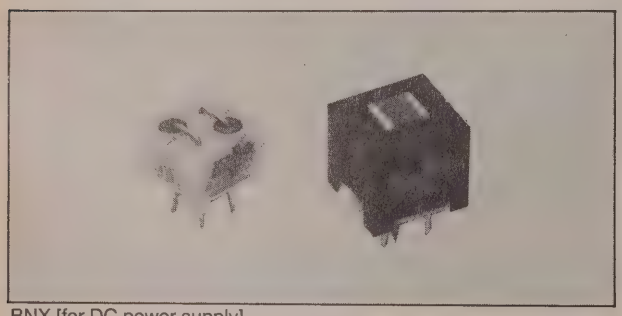
EMI-GUARD DSS710 D 223S 12-22

The DSS710 EMI-GUARD uses a new capacitor element which provides the varistor function. This varistor-capacitor not only works as a bypass capacitor but also directs high-voltage surges to ground. The DSS710 EMI-GUARD is a 3-terminal component so that its high frequency functions are substantially better than those of conventional capacitors. Furthermore, it is combined with ferrite beads to form a T-type filter circuit that effectively dampens noise.

The DSS710 EMI-GUARD efficiently removes quick-rising surges and high-frequency noise above 50 or 60 MHz which conventional capacitors and varistor-capacitors are incapable of removing.

Varistor capacitors are used even where EMI filters fail. They are self-healing and effective in circuits having 500-600V impulses.

A smaller version designated DSS706-351D221M25-50 provides a lower capacitance value aimed at signal line filtering.

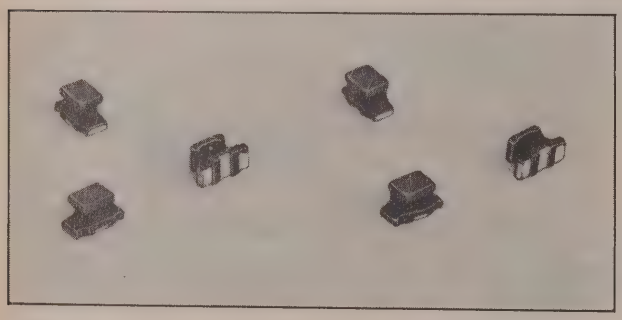


BNX [for DC power supply]

BLOCK TYPE EMIFIL®, BNP/BNX SERIES

Murata Erie's block type EMIFIL BNP/BNX Series completely eliminates noise over extremely wide frequency bands. The BNX is perfect for use in DC power circuits, while the BNP is ideal for eliminating noise in logic signal circuits. Both are designed to perfrom superbly—the result of Murata Erie's expertise in the fields of through-type barrier layer capacitors, monolithic chip capacitors and bead inductors.

Each block contains a number of compact EMI-suppression filters. In addition, the input/output terminals and the grounding terminal are aligned, thus permitting fast and easy assembly on any type of P.C. board.



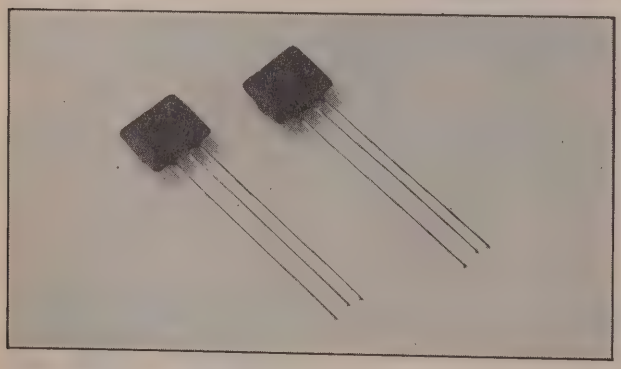
SURFACE MOUNT π CHIP FILTERS NFM52 SERIES AND NFM51 SERIES

The NFM52R Series chip is an efficient signal line noise suppression filter for high-speed digital signal lines where base-band frequencies and noise band frequencies are very close. A new, smaller version NFM51 provides cutoff frequencies up to 500 MHz.

Murata Erie has combined its superior ceramic technologies with a unique circuit configuration to realize outstanding noise suppression effect in these applications. The NFM52R Series assures noise reduction to meet the specifications of CISPR, FCC, etc.

APPLICATIONS

Noise suppression for compact digital instruments, laptop personal computers, HDTV, EDTV, portable VTR, etc.



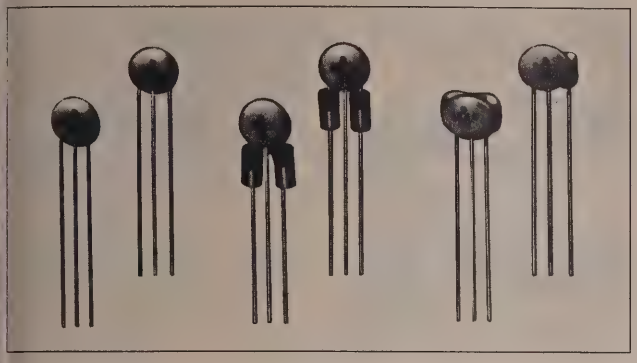
SIGNAL LINE NOISE FILTER, NFV610 SERIES

This high performance noise suppression filter utilizes a unique circuit design to provide exceptional performance in high speed, high impedance digital signal lines. Combining more components than previously available filters so that the high input and output impedances of digital IC's can be matched. This impedance matching greatly reduces the waveform distortions, created by reflections and ringing, that are apparent with convention filters.

MURATA ERIE NORTH AMERICA 220 Lake Park Dr., Smyrna, Georgia 30080 Tel: 1-800-831-9172 Telex: 26-1301 FAX: 1-404-684-1541

EMI/RFI SUPPRESSION FILTERS

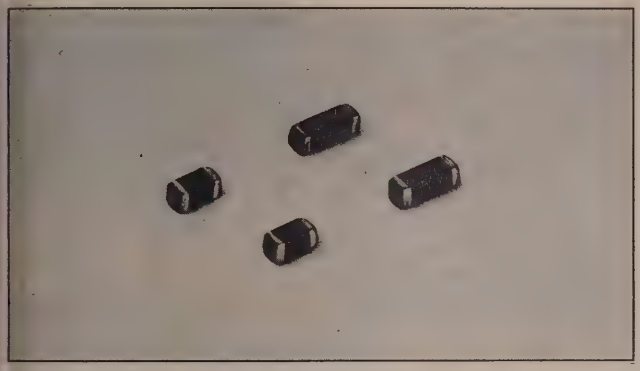
MURATA ERIE NORTH AMERICA



Disc-Type for PCB Mounting

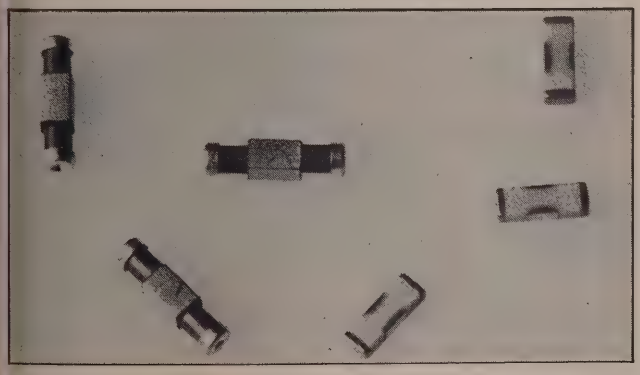
The three terminal design takes advantage of lead inductance and is actually a T type filter when compared to a normal two leaded disk capacitor. The advantage is that the inherent resonance is shifted up in frequency while at the same time the attenuation above the resonant point is improved because of the inductive elements.

These parts are available with or without ferrite beads. Ideally suited to both DC powerline filtering and signal line filtering particularly at I/O ports.



Surface Mount Ferrite Chips

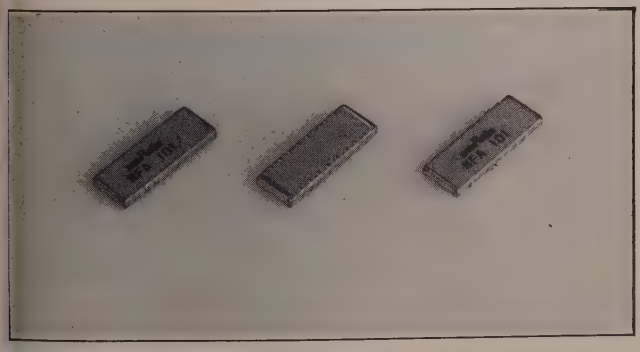
The BLM series of ferrites provide a wide range of attenuation from 70 Ohms to 2000 Ohms at 100 MHz due to a unique internal construction. This multilayer ferrite bead is an inexpensive and effective way to attenuating noise on signal and DC powerlines without introducing any capacitance. Available in STD EIA sizes 0603, 0805, 1206 and 1806.



Surface Mount Filters

The NFM41 series and the smaller NFM40 series SMT filter is a three terminal chip cap, essentially a feedthru capacitor where the NFM61R is a three terminal T filter.

The capacitive only filter, NFM41 series, is designed for low current 300mA signal line applications. The T series, NFM61R, is more suited to DC Powerline filtering because of the higher current rating of 2 amps and the T configuration which is more suited to low impedance circuits.



Surface Mount Filter Arrays

The NFA is similar to the NFM41 described above except that eight feedthru capacitors are combined in a single package. These components are ideally suited for high impedance I/O filtering, where PCB space is a premium.

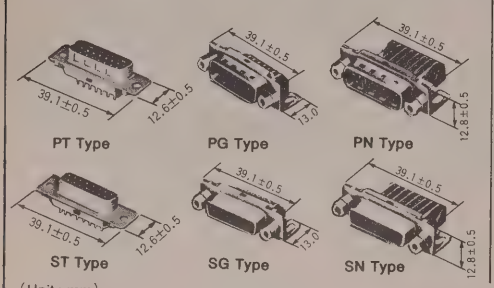
NEW EMI/RFI FILTERED CONNECTORS

MURATA ERIE NORTH AMERICA

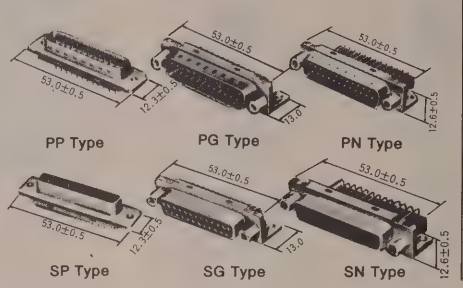
CUBN/L SERIES

DIMENSIONS: mm

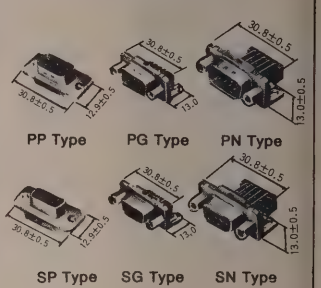
CUBN15 Series



CUBN/L25 Series



CUBN/L09 SERIES



(Unit : mm)

BUILT-IN FEED-THRU CAPACITOR

FEATURES

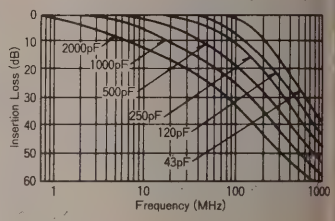
- Compatible with all "D" connectors
- Low Cost/High Reliability
- 6 capacitor values
- Excellent high frequency filtering characteristics

SPECIFICATIONS

Series	Number of Lines	Rated Voltage	Rated Current	Capacitance Value (pF)	Operating Temp. Range
CUBL09 CUBN09	9	100VDC	5ADC	43 ± 30%	-25°C to +85°C
				120 ± 30%	
CUBN15	15			250 ± 30%	
				500 ± 30%	
CUBL25 CUBN25	25			1000 +80% -20%	
				2000 +125% -25%	

Applications: Land and Mobile Radiotelephone, Personal Computer, Display, Monitor, Printer, Modem, POS

INSERTION LOSS (TYP)



BUILT-IN VARISTOR CAPACITOR

FEATURES

- Compact
- Surge Protection
- Mates with all conventional "D" connectors
- Low Cost/High Reliability

NTK

TECHNICAL CERAMICS

Since its founding in 1936, NTK Technical Ceramics has expanded its role in ceramics technology from industrial ceramics to piezoelectric and dielectric ceramics. From these new ceramics, NTK has developed a broad line of products for microwave, acoustic, electronic, and electromechanical applications. The company's substantial efforts in research and development in ceramics and related technologies has gained for NTK a position of leadership and reliability in state of the art modern technical ceramics.

455 KHZ FILTERS

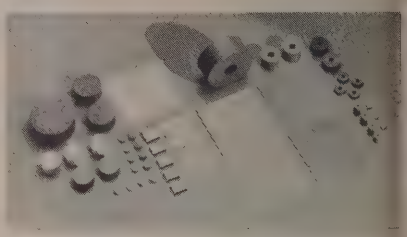
☐ Miniature ☐ Surface Mount

Featuring a complete line of filter characteristics, NTK's Ceramic Filters are temperature stable and cost effective.

MICROWAVE DIELECTRICS

☐ Resonators ☐ Substrates ☐ Metalized Substrates

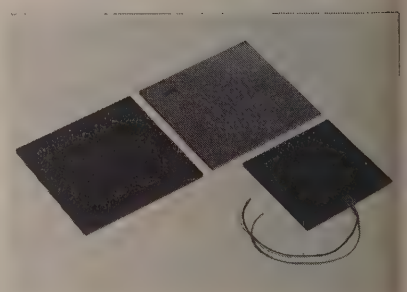
NTK offers the most complete line of high-Q Dielectrics for microwave applications available. Resonators and substrates are available in both standard and custom configurations.



PIEZO RUBBER

☐ Sheet Form ☐ Wire

A unique, state of the art, flexible Piezoelectric material. Its durability and pressure stability make it an ideal material for advanced designs in acoustic applications.



PIEZOELECTRIC ACTUATORS

☐ Bimorphs ☐ Piezo Stacks

Electromechanical devices for a broad range of displacement and sensor applications.

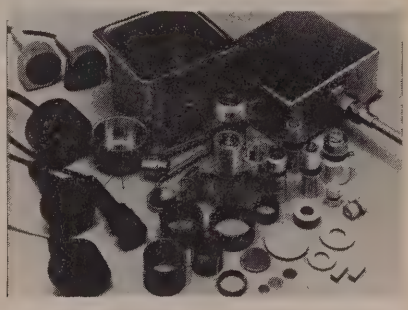
ULTRASONICS

☐ Transducers ☐ Meters ☐ Generators ☐ Cleaners

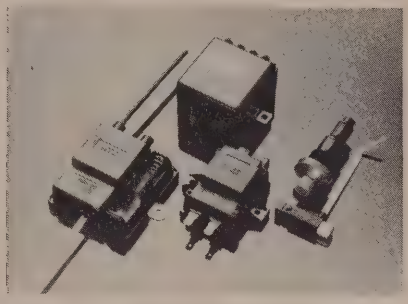
NTK's complete line of Ultrasonic Transducers and equipment include devices for air acoustics, fish finders, ultrasonic cleaners and power tools.



GAS IGNITOR PRODUCTS

☐ Piezo Ignitors ☐ Electronic Ignitors

State of the art PZT materials and 20 years of experience in gas ignition applications has resulted in the most comprehensive high-rel line of components for ignition systems.



PIEZOELECTRIC AUDIO TRANSDUCERS

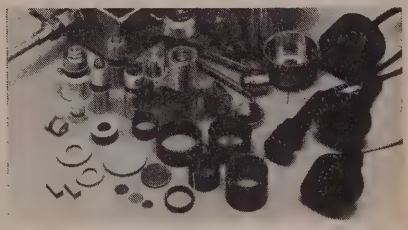
☐ Diaphragms ☐ Buzzers ☐ Speakers
☐ Tweeter Elements

NTK offers a complete line of high efficiency sound transducers in both standard and custom designs with a wide range including single, low frequency devices to broad-band voice and tweeter elements.

PIEZOELECTRIC CERAMICS

☐ Lead Zirconate Titanate

A complete family of PZT Ceramics including mil-std. compositions.



IC PACKAGES

Making full use of the excellent electrical, heat-radiating, mechanical, and heat-resistant properties of alumina ceramics, NTK manufactures various types of IC Packages by application of its metalizing and vitrifying techniques.

APPLICATIONS

- Pager
- Cellular Telephone
- SSB
- Cordless Telephone
- Radio
- Transceiver

FEATURES

- Compact Size
- High Performance
- Low Insertion Loss

Filter, Transformer and Common Mode Choke for 10 Base-T (Twisted Pair) 62 Pins

Electrical Specifications @ 25°C	
Dielectric Withstanding Voltage	2000 Vrms
Insertion Loss (1-10 MHz)	See Below
Crosstalk (1-10 MHz)	30 dB Min
Group Delay Change (1-10 MHz)	2.0 nS Max.
Cut-off Frequency	17.5 MHz ± 1.0 MHz

INSERTION LOSS (dB Max.) [1]	XMT	RCV
	8	1

ATTENUATION [2] (-dB Min.)	XMT	RCV
20 MHz	7.0	6.0
25 MHz	19.0	14.0
30 MHz	32.0	20.0
40 MHz	35.0	31.0

PCA Part Number: EPE6002

Notes : 1 Measured at Fundamental Frequency (10.0 MHz)
2 Referenced to the Output Level Fundamental Frequency

SO-16 SMD Isolation Transformers for LAN-ETHERNET Applications

Features

- Low profile for auto-insertion
- Low leakage inductance (LE) and interwinding capacitance (CW)
- Turns ratio - 1:1 ± 5%
- HIPOT-2000Vrms. (to comply with LANS safety requirements)
- Also available on 500Vrms, add "X" to the PCA P/N, eg. EPA1885-5X

16 Pin DIP or SMD Isolation Transformers for LAN-ETHERNET Applications

Features

- Designed for IEEE 802.3 (10 Base 2, 10 Base 5) and ECMA Requirements)
- Low profile for auto-insertion
- Low leakage inductance (LE) and interwinding capacitance (CW)
- Turns ratio - 1:1 ± 5%
- Available on 16 pin DIP package and 16 pin SMD package
- HIPOT-2000Vrms. (to comply with LANS safety requirements)
- Also available on 500 Vrms, add "X" to the PCA P/N, eg. EP9531G-5X

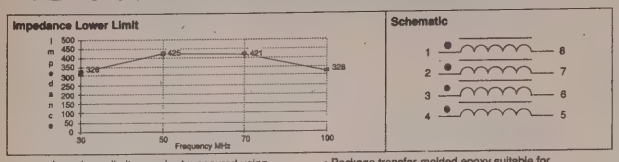
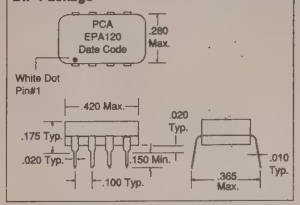
4 Line Common Mode Filter EPA120 & EPA120G

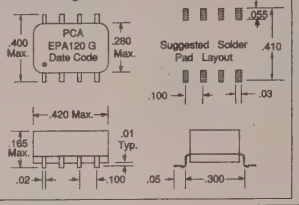


- Impedance limits per chart measured using HP4193A Vector Impedance Meter
- Max Current 1 A DC/Winding
- Temperature rise 45° C Max at 25° C ambient
- Package transfer-molded epoxy suitable for auto-insertion
- Part is symmetrical: May be inserted either way
- 300 Vac Hipot

DIP Package



SMD Package



6 Pin DIL Low-Pass Filter EPA1476

Features

- 10 Base-T Low-Pass Filter Module for 50 Ω System
- Cut-off Frequency : 17 MHz

Package

ISDN "S" Interface Isolation Transformers

FEATURES

- Available in single and dual low profile packages.
- Meet CCITT 1.430 four wire "S" interface.
- HIPOT-2000 Vrms (to comply with International standards).
- Longitudinal Balance (10 KHz - 3000 KHz) - 60 dB Min.

THE FAST AND EASY WAY TO FIND IC MANUFACTURERS' DATA BOOKS!

The 1993 DIRECTORY OF IC MANUFACTURERS' DATA PAGES is a unique index designed to save you time and help you find the manufacturers' precise data book or sheet that you need on any integrated circuit listed in the 1993 IC Master.

Simply look up any IC by base number. The cross-reference will show you the manufacturer's complete device number together with the name and issue date of the applicable manufacturers' data book.

For example: If you wanted the complete manufacturers' data on device number ADOP07. Look up base number 07. Following the base number is the manufacturer's name...Analog Devices, the complete device number ADOP07 and the page number of where the device is described in the IC Master. The listing will then show you that the manufacturer's data book is Analog Devices "Linear Products DataBook" .

Now you can contact Analog Devices by phone or FAX and request the EXACT data book you need. No wasted words, no wasted time.

Plus, where and whom to call for technical information, at any IC manufacturer, is at your fingertips in the complete Manufacturers & Distributors Directory.

A guaranteed time saver, this unique directory is a must for every engineering department!

Don't waste another precious engineering minute.

ORDER THE 1993 DIRECTORY OF IC MANUFACTURERS' DATA PAGES...TODAY!

To order your 1993 Directory of IC Manufacturers' Data Pages,
Contact your local IC MASTER distributor or,
send your purchase order and check for $84.50 plus tax* to:

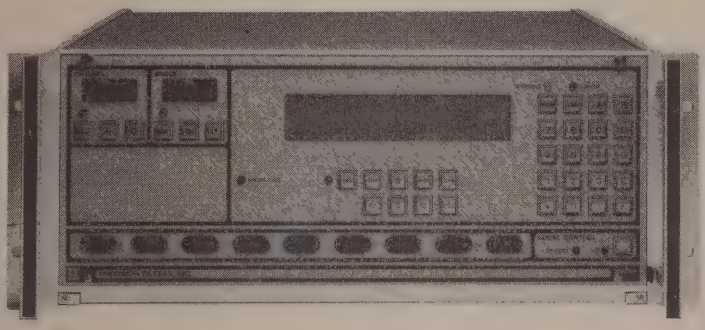
PRECISION FILTERS, INC.

Filters, Amps, Band Translators, Switch Matrices, DC to 2 MHz, 128 Channels.

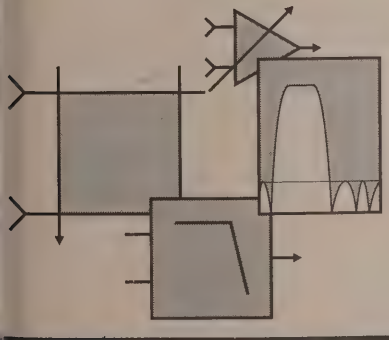
Friendly High Density
- 128 prog. filter/amp channels.
- 32 band-pass channels.
- 64 prog. amplifier channels.
- Differential input, gain, calibration, monitor, and other options, of course.
- Zero suppress.

Friendly Performance
- Band-pass with Q > 10,000.
- 2 MHz prog. filters, 80 dB/octave.
- 204.7 kHz filters, 130 dB/octave.
- Filter match 0.25° and 0.25% typ.



All In One System.

That's system friendly.
That's Precision 6000.
Get all you need today.
Change and upgrade later.



Friendly Functions
- Cal subsystem for go/no-go cal, end-to-end cal, plus diagnostics.
- Group configuration for easy control.
- Up-load and down-load for easy setup.
- Overload detection.
- System status, other reports.

Friendly Choice
- Programmable filters—HP, LP, BP, notch, anti-alias, one-third octave.
- Programmable amplifiers—pre, post, auto-gain ranging.
- Prog. frequency-band translators.
- Switch matrices—4x4 to 32x32.
- Buffered I/O to sense/control other devices.
- Proto-cards for custom circuitry.
- Serial or GPIB computer interfaces.
- Custom systems from standard proven hardware that's available.
- Buy only what you need now, add and change as needs change.

128 filters in a mainframe

Filters are offered in a wide variety of types that you can mix and match within the 16 card mainframe.

Filters come one, two, four, or eight per card, depending on resolution and other performance features.

2 MHz filters

We have a tradition of leading the way to higher frequency filters. We introduced the industry's first 2 MHz bandwidth filters for programmable use. 80 dB/octave attenuation. Time delay superior to Bessel.

Elliptics as sharp as 130 dB/octave

Precision was first to offer elliptics with 80 dB/octave attenuation. Now we're the first to add the sharper option of 130 dB/octave for frequencies up to 204 kHz.

Passband ripple is 0.044 dB p-p, and there's 1° phase match up to the cutoff frequency.

Open door policy on configuration

You can mix types of filters. You can also add a variety of preamps, post amps, gain ranging amplifiers, and transducer amplifier/filters.

A variety of additional system enhancements match the Precision 6000 to your requirements. Frequency-band translators, switch matrices, buffered I/O interface cards and prototype cards are available for your system.

Easy programming

Set up the system at the front panel. One command uploads the set-up to a host computer. Down-load later to program the system. Choice of serial or GPIB computer interfaces.

Precision family of signal conditioners

Call Precision Filters for all your signal conditioning requirements. Signal switching systems, A/D conversion systems, and VXI-based systems are available. See Section 2325.

• See amplifier systems, transducer/amplifier systems, and auto-ranging amplifier systems in Section 1100.
• See other data acquisition systems in Section 2325.

Precision Filters, Inc. ● 240 Cherry Street ● Ithaca, New York ● 607-277-3550 ● Fax 607-277-4466

PRECISION FILTERS, INC.

A growing selection of filters

Precise programmable filters are offered in a wide variety of types that you can mix and match within the 16 card capacity of the Precision 6000 mainframe. Filters come one, two, four or eight channels per card, depending on resolution and other performance features.

Custom systems at off-the-shelf prices

Not only can you mix various types of filters, you can also add a variety of preamps, post-amps, gain ranging amps, and transducer amps (see Section 1100), as well as other signal conditioning devices such as frequency-band translators and switch matrices (see Section 2325).

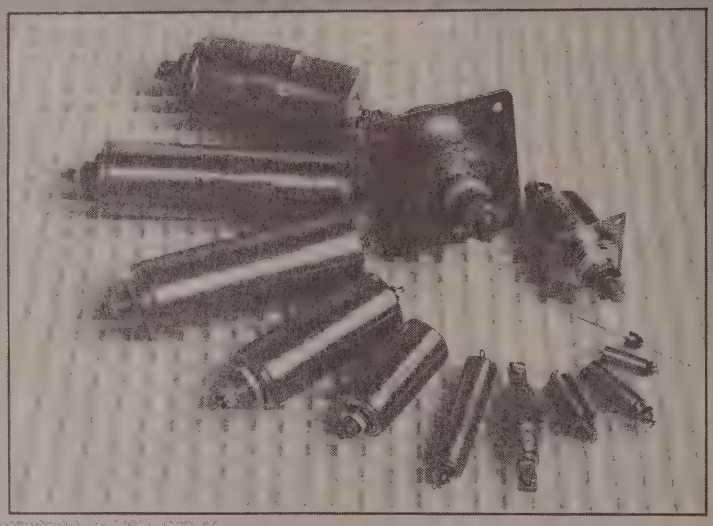
RFI Corporation

EMI/EMC/RFI/EMP FILTERS



RFI/EMC filters for 600 OHM signal and telephone circuit applications are designed to cover the broad frequency spectrum requirements of our most sophisticated communication systems.

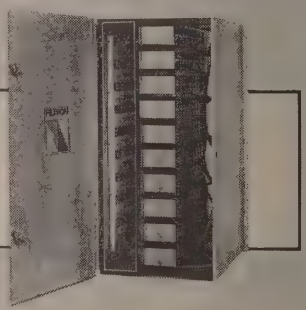
Go right to the pros...RFI. RFI has the talent and experience to solve a multitude of tough EMI/EMC/RFI/EMP problems. After all, we're the leader in customized multi-circuit filters in tight packages and we've got over 40,000 approved designs to back it up.
Don't need a RFI original? We can still help you. Our catalog of standard filters includes:

- **Signal line, data transmission, telephone and fire alarm filters** for secured or TEMPEST installations pre-wired to your specifications in RF shielded cabinets.
- **Powerline filters** including **U.L. Listed** for high-power installations, shielded rooms, communication centers and military areas. From 5 to 2000 Amperes.

Filtron customers! We are now a part of RFI.

Whatever your filter needs... custom-designed or standard... come to the source...RFI. We've been doing it right since 1961. Our sales and engineering staff are ready to assist you. Call them today.

RF Shielded Communications Filtered Cabinets



Give us your requirement, we'll give you the solution to fit it.

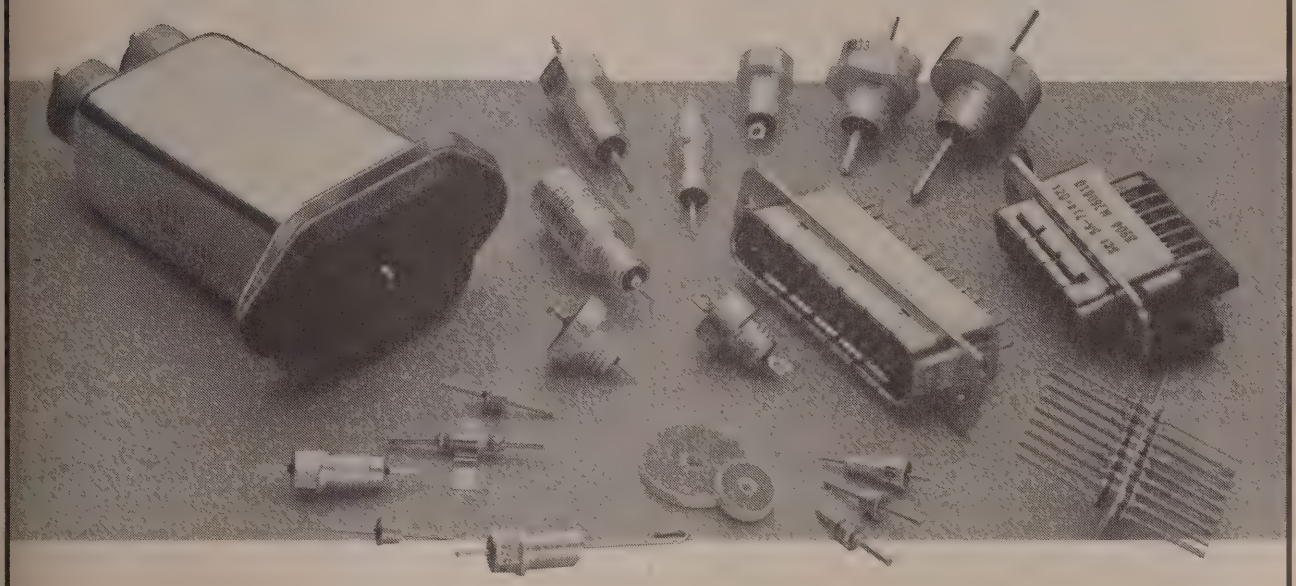
Clean up Electronic Pollution



with Spectrum Control EMI/RFI Filters and Connectors

Dedication to Quality

Spectrum Control has invested all of the resources necessary to establish the most efficient and accurate design, material, assembly and testing procedures. The Spectrum production process is an outgrowth of our Quality Management System which instills in every member of the Spectrum team a single-minded purpose of achieving defect-free production. We're proud to produce the highest quality and most reliable filters, capacitors and filtered connectors in the industry.

Reliable On-Time Delivery

Recognizing the importance of on-time delivery to our customers, Spectrum Control has instituted a flexible order processing/ production system to achieve consistent, on-time delivery performance. This system has enabled Spectrum to establish the industry's shortest product lead times.

Whether it be MRP II, continuous flow manufacturing or just-in-time . . . we deliver to meet our customer's needs.

Custom Filter Solutions

Despite the breadth of our EMI/ RFI filter and connector product line, there exist certain applications which demand a custom EMC solution. Our engineering staff will work with your production team to design an EMI/RFI filter or connector which meets your individual requirements. And our integrated engineering and manufacturing operation ensures your custom filter will be produced in accordance with the quality standards established for our standard components . . . with a timely and dependable delivery schedule.

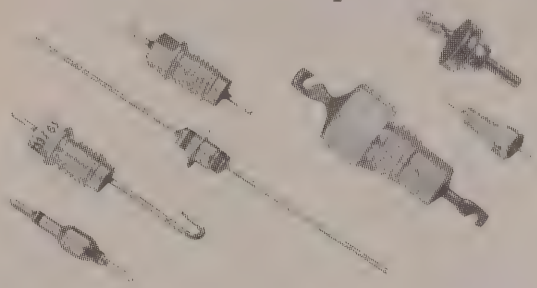
EMI/RFI Filters and Connectors

SPECTRUM CONTROL INC.

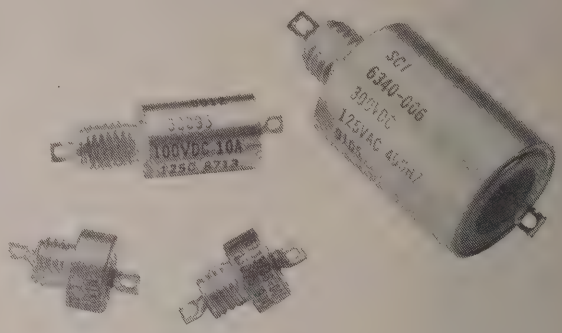
Resin Sealed / Solder-in Filters and Capacitors



Cost effective filtering is available in a wide range of threaded and solder-in bushings, capacitance values, temperature characteristics and circuit types. A high temperature series (300°C) facilitates a variety of soldering techniques. All parts are built in accordance with MIL-F-15733 and MIL-F-28861.

Applications: Transceivers, microwave filters, telecommunications equipment, industrial control systems, and multi-circuit filter assemblies.

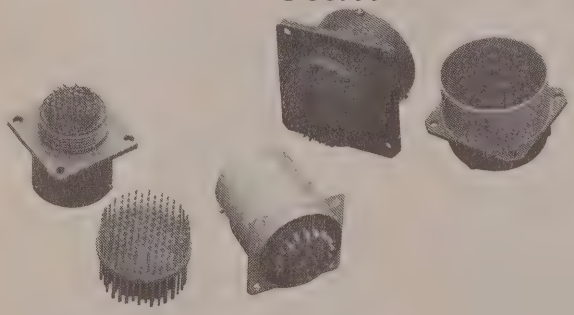
Hermetically Sealed Filters and Capacitors



These filters and capacitors are ideal for EMI/RFI filtering in hostile environments. Design flexibility is enhanced through a wide range of bushing sizes and circuit types. These filters are built in accordance with MIL-F-15733 or MIL-F-28861, with Q.P.L. listings to both.

Applications: Power supplies, aerospace products and multisection filters.

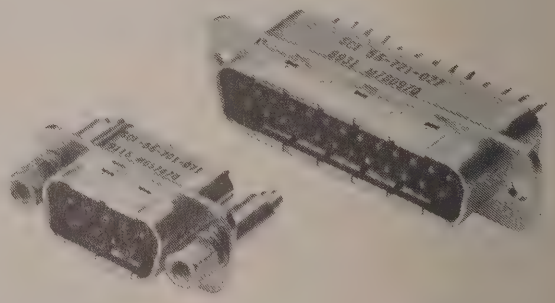
Filtered Circular Connectors MIL-C-38999



This line of filtered connectors employs multi-layer ceramic capacitors for effective filtering and to allow customization for specific applications. This connector series is available in shell sizes 8 through 25, insert arrangements of up to 128 pins, a wide range of capacitance values and mounting configurations.

Applications: These connectors are intermateable and, in most cases, completely interchangeable with the standard unfiltered connectors found in the MIL-C-38999 series.

Filtered Subminiature D Connectors



Spectrum connectors ensure volumetric efficiency by placing filtering in existing connector space, freeing on-board filter area for other uses. RF integrity is enhanced through one-piece housing with grounding springs and solid internal ground plane. Shell sizes 9 through 50 are available with multiple termination types. Programmable filter locations using Pi filters or feedthrough capacitors.

Applications: Computers, telecommunications, data security and industrial control equipment.

SPECTRUM CONTROL INC.

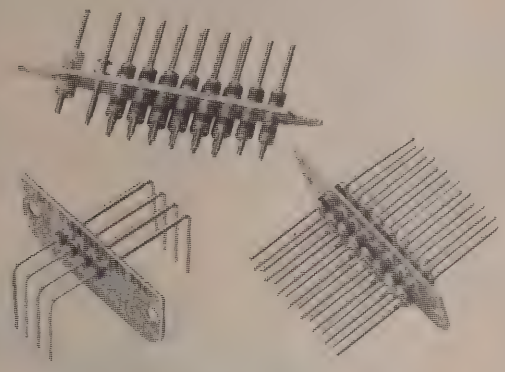
EMI/RFI Filters and Connectors

SPECTRUM CONTROL INC.

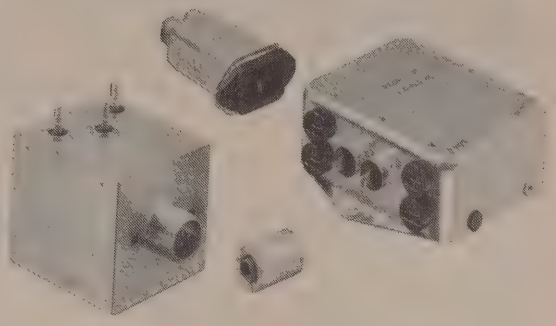
Filter Plate Assemblies



Programmable filter loctions and close center-to-center spacing accommodates design and volumetric considerations. Solderable gold plated pins allow for board installation or connector mounting. These assemblies are tested 100% of critical parameters.

Applications: Telecommunications equipment, industrial control systems and military/aerospace products.

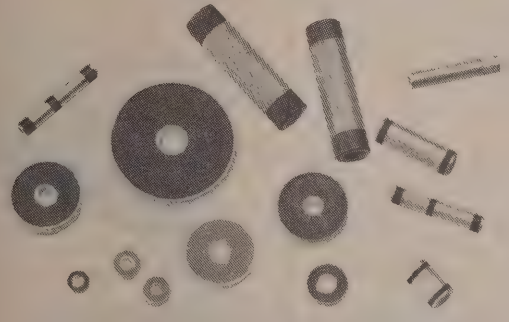
Multisection Filters



A number of standard filters as well as custom designed filters enable you to satisfy varied mounting and/or filtering requirements. Safety and reliability are ensured through 100% testing of critical parameters, with all filters built in accordance with MIL-F-15733. UL and C.S.A. recognition is available on selected filters.

Applications: Power and signal line filters for power supplies, secure communication, UPS systems and computers.

Tubular / Discoidal Filters and Capacitors



The small size of these components offers mounting advantages by allowing for high density placement. All parts are 100% tested to critical parameters, available in wide capacitance value range and temperature stability, and supplied with solderable, plated terminations with nickel barrier to prevent leeching.

Applications: Components used in the assembly of filter pins, filtered connectors and filter plates.

EMC Testing Services

Our state-of-the-art EMC test facility uses fiber optic sensing probes an anechoic chamber, shielded chamber and an all-weather, open field test site. Filtering solutions can be provided for any EMC problem identified.

Testing in accordance with FCC, UL, SAE, SAMA, VDE, CISPR, CSA and to military specifications MIL-STD-461A, B and C, MIL-STD-462, MIL-STD-463 and provide TEMPEST services and products.

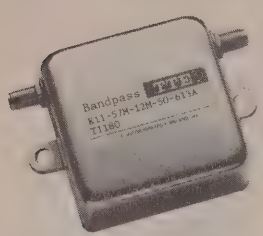
TTE® America's Filter Specialist Since 1956

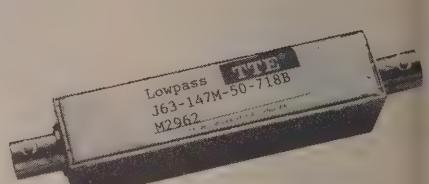
Passive *Bandpass Filters*



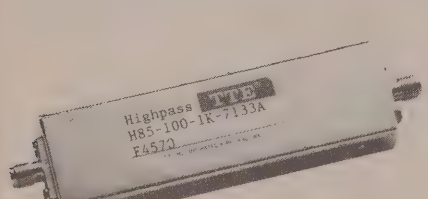
- Designs Include : Bessel, Butterworth, Chebyshev and Elliptical Function
- Number of poles : 2 to 6
- Frequency Range : 100Hz to 3GHz
- Package Styles : PCB, BNC or SMA
- Guaranteed Shipment : 10 Working Days ARO (QTY 1-10)

Passive *Lowpass Filters*

- Designs Include : Bessel, Butterworth, Chebyshev and Elliptical Function
- Number of poles : 2 to 11
- Frequency Range : 10Hz to 3GHz
- Package Styles : PCB, BNC or SMA
- Guaranteed Shipment : 10 Working Days ARO (QTY 1-10)



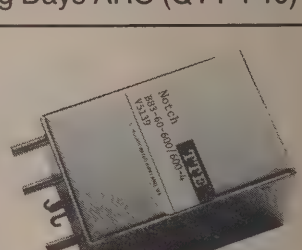
Passive *Highpass Filters*



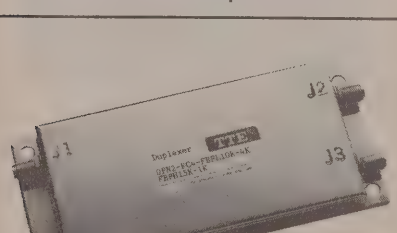
- Designs Include : Bessel, Butterworth, Chebyshev and Elliptical Function
- Number of poles : 2 to 11
- Frequency Range : 100Hz to 3GHz
- Package Styles : PCB, BNC or SMA
- Guaranteed Shipment : 10 Working Days ARO (QTY 1-10)

Passive *Band Rejection Filters*

- Designs Include : Butterworth, Chebyshev and Elliptical Function
- Number of poles : 2 to 6
- Frequency Range : 1kHz to 3GHz
- Package Styles : PCB, BNC or SMA
- Guaranteed Shipment : 10 Working Days ARO (QTY 1-10)



Passive *Diplexers & Duplexers*



- Designs Include : Butterworth and Chebyshev
- Types : Contiguous or Noncontiguous Passbands
- Number of poles : 2 to 6
- Frequency Range : 10kHz to 3GHz
- Package Styles : SMA
- Shipment : 10 Working Days ARO (QTY 1-10)

Filter Systems

These bench top and rack mounting enclosures will accept from 1 to 36 filters. Any T T E active or passive filter may be specified.

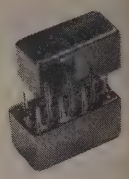
TL-200	200MHz	342.0MHz	1026.0MHz	1.5:1	484	$19.95

1. Other frequencies are available. Call for information.
2. Case options, BNC, SMA and N connectors are available. BNC (B) package: add $25.00, SMA (A) package: add $28.00 and N (N) connector package: add $32.00. To order add a letter to the part number as follows: DL-5-B for BNC connectors, DL-5-A for SMA connectors or DL-5-N for N connectors. The standard configuration is Plug to Jack.
3. The prices listed are for sales in the United States, Canada and Mexico. The price in other countries is $13.95 for the DL series and $25.94 for the EL and TL series in quantities of 1-9 units.
4. The minimum order is $100. Any TTE products may be purchased to meet this minimum.

TTE® Stock 50Ω Bandpass Filters



Constant Impedance Bandpass - DIP Cases, 21.4MHz - 70MHz

Model No.	Center Freq. F_O	Passband 1dB Max. @	Stopband 20dB Min. @	VSWR 1.3:1 Typ.	Case No.	Price Ea. Qty. 1-9

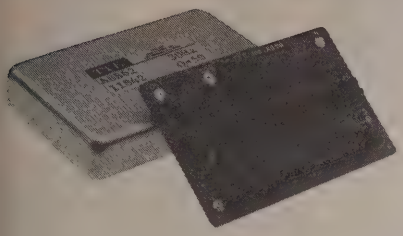
1. Other frequencies are available. Call for information.
2. Case options, BNC, SMA and N connectors are available. BNC (B) package: add $25.00, SMA (A) package: add $28.00 and N (N) connector package: add $32.00. To order add a letter to the part number as follows: DK150-5P-B for BNC connectors, DK150-5P-A for SMA connectors or DK150-5P-N for N connectors. The standard configuration is Plug to Jack.
3. The prices listed are for sales in the United States, Canada and Mexico. The price in other countries is $51.94 for the -5P series and $45.44 for the -10P and -15P series in quantities of 1-4 units.
4. The minimum order is $100. Any TTE products may be purchased to meet this minimum.

TTE offers many other filter types from stock including Highpass Filters. Our new catalog is over 100 pages of filter products including active filters, switchable filter banks and Microwave Filters. Specials to 18GHz are available.

TTE® America's Filter Specialist Since 1956

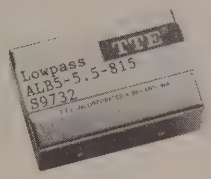


Active *Bandpass Filters*

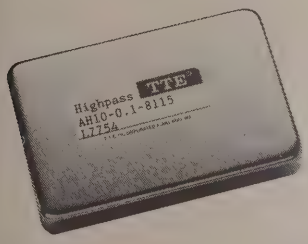
- Designs Include : Bessel, Butterworth, Chebyshev
- Number of poles : 1 to 3 pole pair
- Frequency Range : 1Hz to 200kHz
- Package Styles : PCB, BNC or SMA
- Guaranteed Shipment : 10 Working Days ARO (QTY 1-10)

Active *Lowpass Filters*

- Designs Include : Bessel, Butterworth and Chebyshev
- Number of poles : 2 to 10
- Frequency Range : 0.1Hz to 1MHz
- Package Styles : PCB, BNC or SMA
- Guaranteed Shipment : 10 Working Days ARO (QTY 1-10)



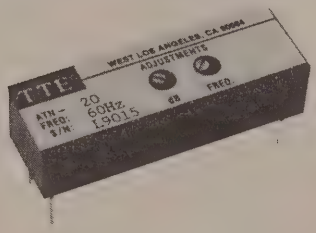
Active *Highpass Filters*



- Designs Include : Bessel, Butterworth and Chebyshev
- Number of poles : 2 to 10
- Frequency Range : 0.1 Hz to 1 MHz
- Package Styles : PCB, BNC or SMA
- Guaranteed Shipment : 10 Working Days ARO (QTY 1-10)

Active *Band Rejection Filters*

- Designs Include : Twin—T Notch
- Types : Fixed and Adjustable
- Frequency Range : 1Hz to 10kHz
- Package Styles : PCB, BNC or SMA
- Guaranteed Shipment : 10 Working Days ARO (QTY 1-10)



Active *PROGRAMMABLE*

- Designs Include : Butterworth and Chebyshev
- Types : Lowpass and Highpass
- Number of poles : 5
- Frequency Range : 1Hz to 128kHz
- Package Styles : PCB
- Shipment : 10 Working Days ARO (QTY 1-10)

411AFS Amplifier & Anti-Aliasing Filter System

This filter system is used in laboratories that analyze speech and other audio and sub-audio utterances. ***Stock Delivery.***

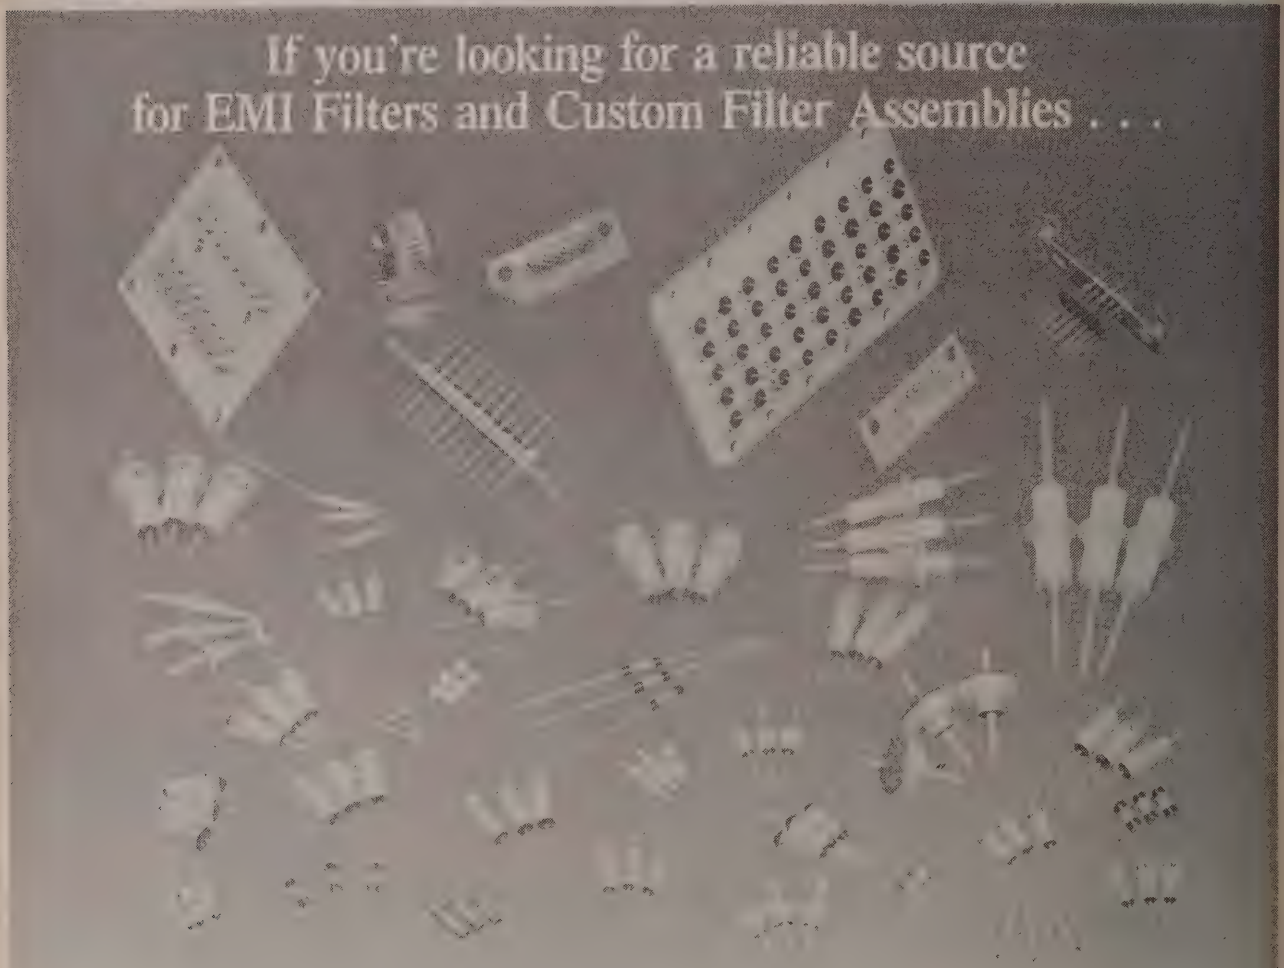
TUSONIX

If you're looking for a reliable source for EMI Filters and Custom Filter Assemblies . . .



Tusonix, as a QPL source, is proud of its JIT performance

Tusonix offers the industry standards in both single layer and multilayer EMI/RFI ceramic feed-through filters and capacitors in commercial and QPL versions. Most are available from stock in production quantities, ready for immediate shipment.

When it comes to custom packaging EMI/RFI feed-thru filters and/or filter capacitors, Tusonix offers a complete in-house custom assembly capability. Every assembly is 100% tested in Tusonix' quality assurance laboratories. The result is a reliable, economic assembly that satisfies your unique needs.

Tusonix also offers high voltage and QPL ceramic disc capacitors, close tolerance tubular ceramic capacitors to Mil-C-20D, ceramic trimmer capacitors to Mil-C-81, and Weecon ceramic plate capacitors in a wide range of capacitance values/tolerances, temperature characteristics, and case sizes.

Write for literature TODAY . . . or please call us at 602-744-0400.

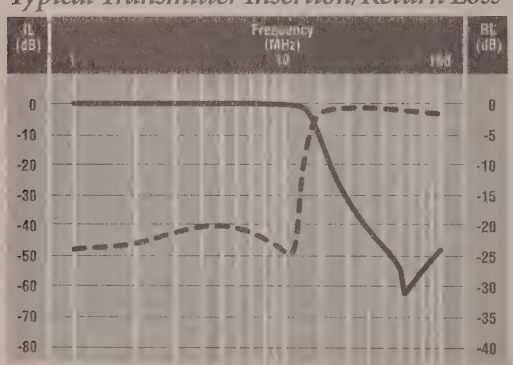
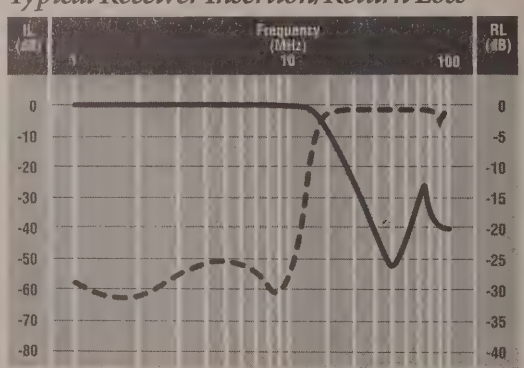
Additional filter modules are available utilizing different resistor values for different chip sets. Dimensions represent maximum package envelope including standoff height.

Typical Transmitter Insertion/Return Loss



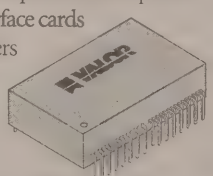
Typical Receiver Insertion/Return Loss



= Insertion Loss
= Return Loss

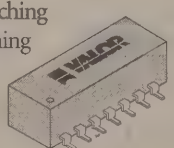
Ethernet 10BASE–T and Token Ring network products for:

- Workstations and personal computers
- Adapter or interface cards
- MAU transceivers
- Repeaters
- Concentrators



Characteristics

- EMI filtering and noise suppression
- Signal isolation
- Impedance matching
- Signal conditioning and shaping
- Overvoltage protection



Features

- Designed for low insertion loss, low delay distortion and high attenuation in the stop band
- 500 V rms and 2000 V rms isolation
- Through–hole and surface–mount packages
- Quad and Dual filters available
- Low cost
- Custom designs available

For information on other Valor products, see Section 5600 - Pulse Transformers, Section 4025 - Converters

For additional information on these products, please call your local Valor representative or distributor as listed in the front of this volume.

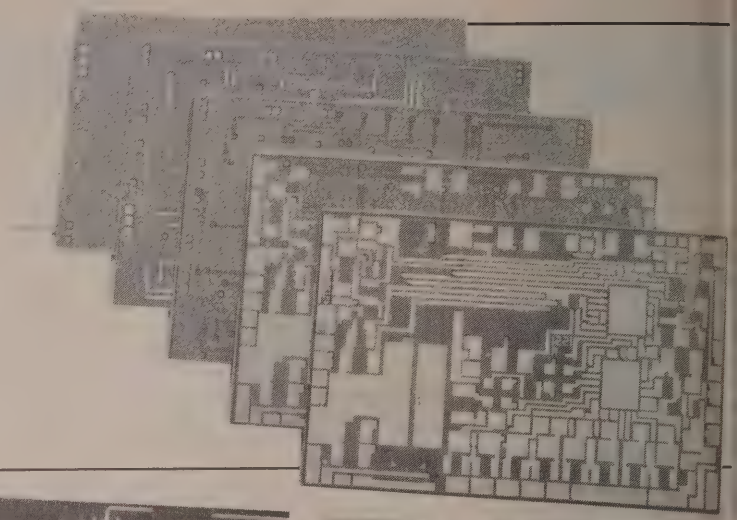
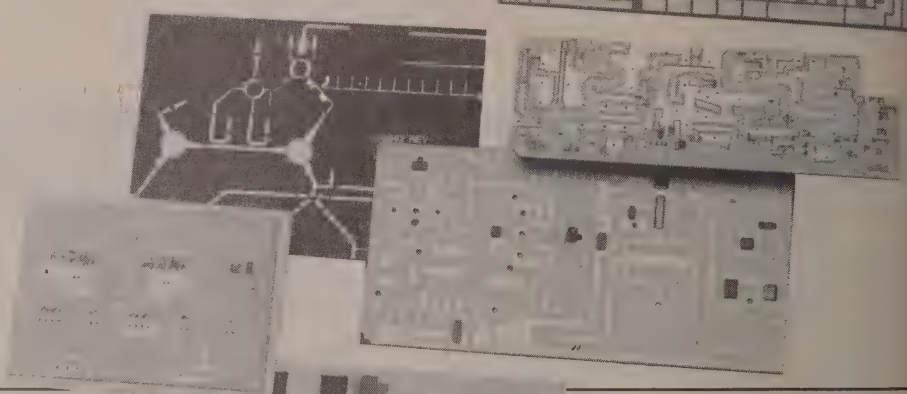
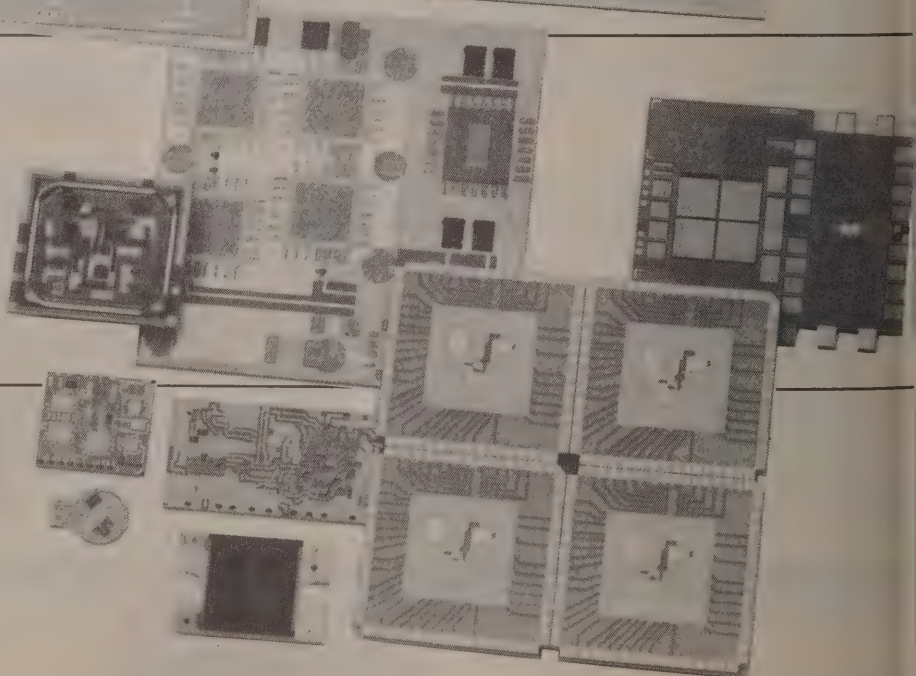
CUSTOM THICK FILM SUBTRATES



Thick Film Substrates
- In House Design
- Prototype and Production Quantities
- Multilayer as well as Single Layer
- Various Substrate Materials:
  - Alumina
  - Beryllium Oxide
  - Ferrite
  - Quartz
- Printing: Gold, Platinum, Silver, Copper



RF Circuits
- Fine Line Definition and Tight Tolerances
- Through Hole Metallization
- Fritless Gold Helping to Reduce Insertion Loss
- Mixed Metals Providing Excellent Wire Bonding and Solderability.



Specialty Applications
- Edge Metallization
- Wide Variety of Conductor and Resistor Systems
- Resistor Printing on Dielectric
- Solder Printing and Reflow
- Nickel Barrier Plating for Chip Components

- Quick Turn-Around
- Laser and Abrasive Trimming
- Dicing
- Engineering Services
- Cost Competitive
- Excellent Customer Service

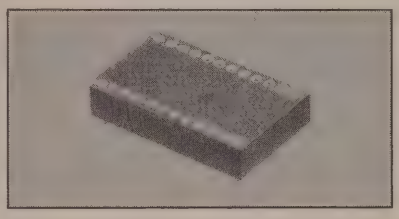
Correct-A-Chip Technology:
Interconnection/Packaging Solutions to Board Redesign, Rework & Enhancement Problems

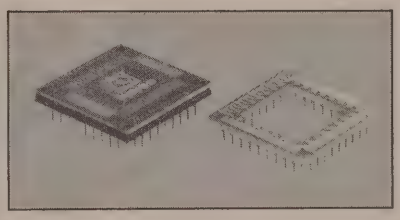
The introduction of new devices and packages, and the disappearance of others, can cause major problems — and create new opportunities — for the PC board designer. Aries Correct-A-Chip technology was developed specifically to help convert problems to opportunities by enabling you to upgrade or further enhance your products without costly redesign or rework, and without scrapping what might amount to significant stocks of board and parts inventories. The technology not only enhances performance but can significantly reduce both rework costs and time-to-market.

Essentially, Correct-A-Chip is an adapting/ enhancing interconnect technology that lets you solve replacement, upgrade or redesign problems by performing any one or combination of the following functions:

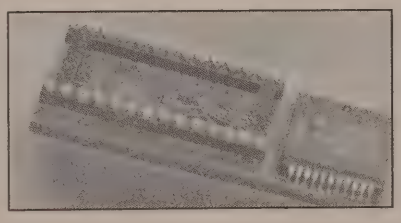
1. **Rerouting circuitry to change the pinouts within the same package style.** This is accomplished by the Correct-A-Chip socket.



2. **Converting from one termination style to another — e.g., from surface mount to thru-hole...or PLCC to SOIC, etc...or vice versa.** This is the job of the Correct-A-Chip adapter.



3. **Adding componentry or functionality within the same space...or deleting componentry to achieve the same or greater functionality with less componentry in less space at less cost.** This is achieved with the Correct-A-Chip semi-hybrid daughterboard.



The variations within these three primary capabilities are endless...as are the combinations achievable with one Correct-A-Chip interconnect!

A fourth Correct-A-Chip product line — test heads — is also available for allowing emulator and logic analysis hardware to interface with SMT pads on the board to be tested, without having to solder the chip to the board.

Problems, Problems, Problems – and Sensible Solutions...Fast

To illustrate just how versatile Correct-A-Chip technology is in solving board redesign or rework problems, consider a few of these every day real-world occurrences. You'll probably recognize some of them as similar to those you've encountered.

Problem: You need to replace a 16 pin DIP device with an 18 pin DIP device.
Solution: Don't think new PCB layout...think Correct-A-Chip technology.

Problem: You need to change pinouts to achieve new circuitry.
Solution: Don't think PCB redesign...think Correct-A-Chip socket.

Problem: You need to reduce propagation delays and noise while saving valuable real estate.
Solution: Put your microprocessor-related circuitry on a Correct-A-Chip semi-hybrid daughterboard.

Problem: You need to replace an obsolete DIP device with an enhanced surface mount device.
Solution: Don't think board rework...think Correct-A-Chip adapters.

Problem: You have a very expensive Motorola 68XXX ceramic PGA microprocessor designed into your system.
Solution: Aries' PQFP to PGA adapter is pin to pin equivalent and saves lots of money by allowing you to use the less costly PQFP device.

Problem: Your boards are set up for 28 pin DIP 264 Kbit EPROMs but you want to use a new 2 Mbit EPROM in a 32 pin PLCC package.
Solution: Don't trash your boards or settle for less than 2 Mbits...think Aries Correct-A-Chip adapters.

The Ultimate Problem:
You need to make a change that's going to keep your board current, improve it or reduce its cost.
The Ultimate Solution:
Correct-A-Chip technology lets you accomplish the change quickly, easily, inexpensively with no board redesign or rework.

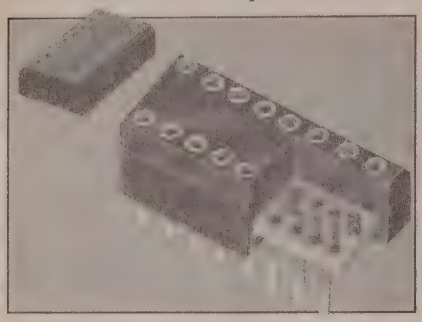
Correct-A-Chip Technology: Interconnection/Packaging Solutions to Board Redesign, Rework & Enhancement Problems

Taking New Routes for Design Flexibility... the Correct-A-Chip Socket



The "standard" Correct-A-Chip socket represents the most basic Correct-A-Chip technology. This clever component actually has a printed circuit board in the molded socket body that reroutes the circuit paths, and thus the pinouts, from the original design to the needs of the new design. All you need to give us is your "from-to" list.

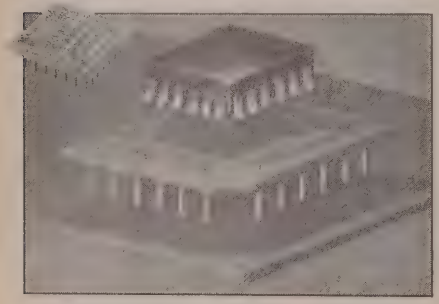
Use of the Correct-A-Chip socket lets you defer costly engineering changes to your PCB by accommodating alternative IC devices that may be required because of availability or obsolescence. With the Correct-A-Chip socket, you can use the new device without additional jumper wires, PC layers, cut traces or other costly, undesirable changes.

Additional pull-ups, bypass caps, etc. can also be incorporated right inside the molded body of the Correct-A-Chip socket.

Alternative ICs can be made immediately interchangeable without changing or replacing your PCB. Field upgrades or retrofits can be achieved with speed and efficiency. Multilayer PCB needs can be reduced by retracing current paths in the Correct-A-Chip rather than through layers of the PCB. And board circuit errors can be corrected without adding jumpers or cutting traces.

For applications facing the added problem of severe height restrictions, Aries LO-PROfile Correct-A-Chip daughterboards provide the same circuitry re-routing capability as our Correct-A-Chip sockets in a package only .250 (6,35) high. Although the IC leads must be trimmed, formed, and soldered to the Correct-A-Chip daughterboard to achieve the low profile, Aries can provide this service at a very low cost.

Easing the Way to Surface Mount and Other Conversions Made Easy... the Correct-A-Chip Adapter



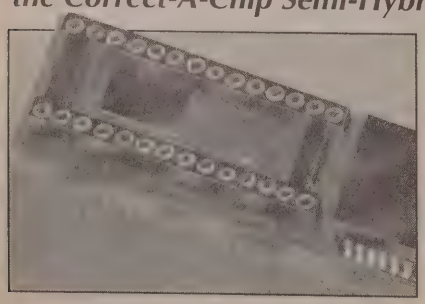
As the trend towards surface mount continues, many manufacturers are caught in the transition. They have a significant investment in thru-hole board production and assembly equipment, processes and training. But, what about all the thru-hole boards currently in production — or design — that could benefit from a surface mount device?

And what about all those board designs that now actually require a surface mount part because of a discontinued thru-hole device?

Unlike the Correct-A-Chip socket, the Correct-A-Chip adapter converts from one termination style to another. For example, it lets users of thru-hole boards take advantage of surface mount devices without any change to the boards. The new device is surface mount soldered to the Correct-A-Chip adapter which plugs directly into the unchanged thru-hole board. The change could even go the other way, if necessary...from thru-hole to surface mount if that were required.

With the Correct-A-Chip adapter, you can just as easily change termination styles within thru-hole or surface mount technologies. For example, you can go from a DIP to a PGA or vice versa on a thru-hole board. Or, you might want to change from a PLCC to SOIC package or the other way around. The Correct-A-Chip adapter will make any of those changes possible...with no need for board redesign or rework.

Performance and/or Function Enhancement... the Correct-A-Chip Semi-Hybrid Daughterboard



For applications that require you to enhance performance and functionality with new and/or additional componentry — in the same board space — Aries has developed the Correct-A-Chip semi-hybrid daughterboard.

Utilizing Aries' surface mount and other packaging techniques, the Aries semi-hybrid daughterboard is a factory programmed, custom interconnect product that incorporates application specific circuitry and expanded componentry to achieve enhanced performance capabilities within the existing socket envelope. The semi-hybrid daughterboard may or may not also incorporate socketing to convert pinouts and/or termination styles.

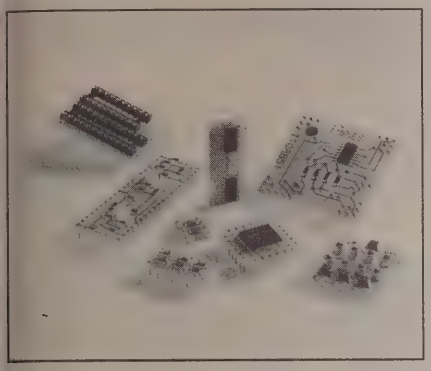
Correct-A-Chip Technology: Interconnection/Packaging Solutions to Board Redesign, Rework & Enhancement Problems (Continued)

Correct-A-Chip Semi-Hybrid Daughterboard (Continued)



A Single Solution to Multiple Problems –

To demonstrate the complete range of capabilities of the Correct-A-Chip semi-hybrid daughterboard, imagine that you just came up with a new design that required:

1. a switch to a SMT device for increased performance, where a thru-hole was previously used
2. a rerouting of the circuitry to achieve new pinouts
3. an additional surface mount component to achieve even greater functionality
4. and a 28 pin DIP package

And, you'd have to achieve all that in the **same space!!**

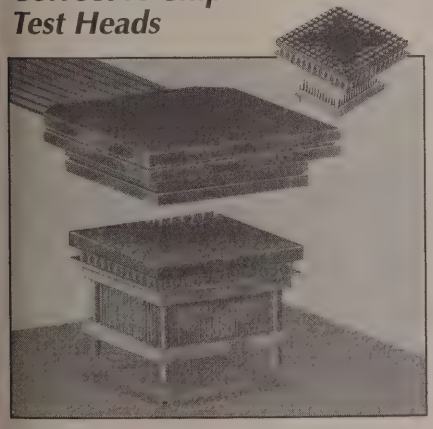
Without Correct-A-Chip technology it would be virtually impossible to even pursue a solution that didn't include extensive board redesign. However, a single programmed Correct-A-Chip semi-hybrid daughterboard could — and actually has — solved any or all of those problems!!

Essentially, the Correct-A-Chip semi-hybrid daughterboard lets you expand componentry and functionality and use all types and combinations of footprints in conjunction with surface mount technology to create what is, in effect, a chip emulator in a compact connector package. To further optimize board space, Aries can use both sides of the Correct-A-Chip daughterboard to incorporate all the new and/or added circuitry and componentry required by your redesign problem. Depending on the application, Correct-A-Chip semi-hybrid daughterboard technology can save as much as 5" sq. (127 mm) or more of board space!

New designs can be made much more versatile by laying out "function sites" on mother boards, and various plug-in functions can then be socketed into the sites depending on application requirements. Older designs can be easily and efficiently upgraded by replacing the original ICs with, for example, RAM/ROM/EPROMs that have better, faster or even totally different circuit functions (e.g., clock/timers, speech synthesizers, etc.).

Depending on the application, Correct-A-Chip technology can be packaged to provide all or any combination of the above capabilities.

Correct-A-Chip Test Heads



These Correct-A-Chip components provide a means of testing surface mount PC boards without soldering the chip to the board. Essentially, a Correct-A-Chip test head permits you to interface emulator and logic analysis hardware to a wide variety of different surface mount footprints.

With thru-hole boards, you can plug the emulator probe directly into the thru-holes (or socket) and perform your board test. But these probes don't mate with surface mount pads. Enter the Correct-A-Chip test head and exit the problem.

As shown in the accompanying illustration, male pins from the test hardware probe plug into the socket portion of the test head. The adapting board of the test head converts the footprint to the necessary configuration. Spring contacts below the adapting board rest on (and mate with) the surface mount pads on the motherboard to complete the circuit from emulator to board.

Like our other Correct-A-Chip products, the use of Correct-A-Chip test heads can save you a lot of time and money...in this case by allowing you to identify bad boards *before* costly surface mount devices are soldered in place.

Aries Correct-A-Chip test heads are available in a variety of configurations to meet your board testing needs. For example:

- Series 65 Correct-A-Chip Test Heads for JEDEC Type QFP to PGA in standard pin counts from 68 to 196
- Series 66 Correct-A-Chip Test Heads for EIAJ Type QFP Packages in standard pin counts from 64 to 256
- Series 67 Correct-A-Chip Test Heads for Specific Chips, including the most popular devices from Motorola, Intel and AMD.

Our test heads are built for heavy duty use. They'll withstand more than 100,000 insertion/withdrawal cycles, which means they'll last as long as you're building and testing boards!

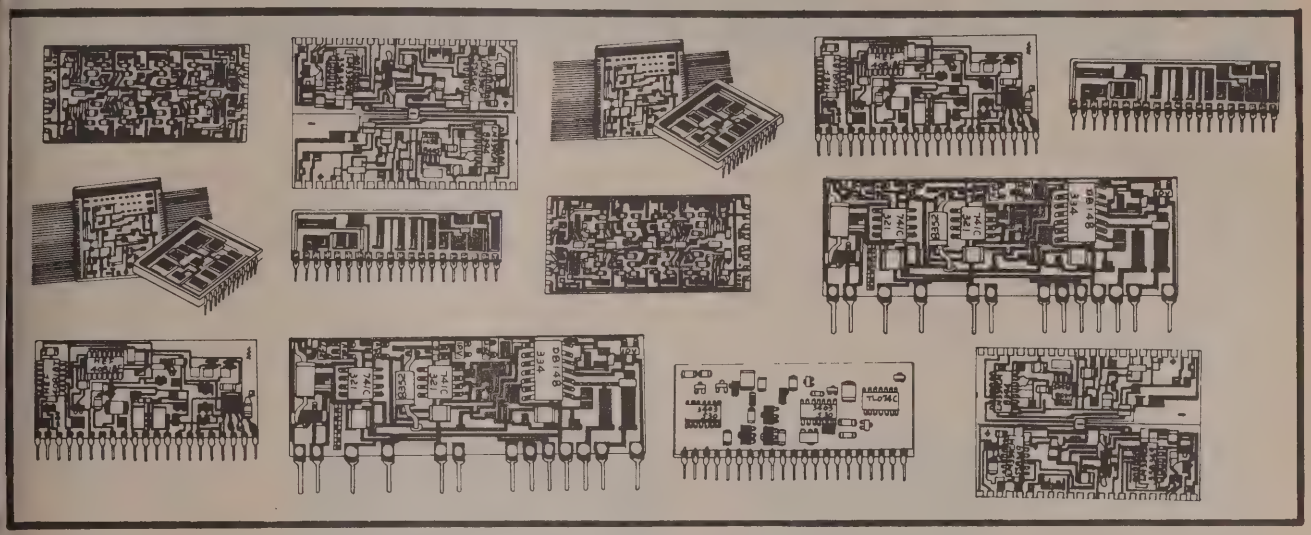
THICK & THIN HYBRIDS



THICK FILM

GENERAL TECHNICAL SPECIFICATION

SUBSTRATE:
Material-96% Al O , 99% BeO
CONDUCTOR:
Material-Pd/Ag, Pt/Ag, Pd/Au, Pt/Au, Au, Ag.
Line spacing-0.000" minimum spacing
Through hole-yes
Line width-0.005" minimum width
Crossover-yes
Multilayer-4 conductor layers
RESISTOR:
Range-0.1ohm-10M ohm(higher values on request)
TCR-30 ohm-30K(ohm: + 50PPM/C), 10 ohm-1M (OHM:+100PPM/C), 0.1 ohm-10M(ohm:+250PPM/C)
TCR tracking-10 PPM/C for 10 ohm-1M ohm
Tolerance-+1% for 1 ohm-10M ohm, +0.3% for 10 ohm -10M ohm on request
Loading capability-50 W/in
Long term stabiltiy-0.3% for 10 ohm-1M ohm
TRIMMING CAPABILITY:
Passive trim-Ratio match
Active trim-voltage,Current, Frquency, Phase.
TECHNICAL CAPABILITY:
* Multi zpnes furnace with termperature controllable at+1%
* Aluminum ultrasonic wire bonder
* Laser trimmers
* Multi-position handlers
* Solder dircrete
* Wire bond
* Epoxy or eutectic bonding
* Viscosity instruments
* TCR testers
* Humidity & temperature cycling chambers from -65 C to +150 C
* Precision multilayer screening
* Ball bonders
* Reflow process

CUSTOM PACKAGES:
* Single-in-line *Dual-in-line *Hermetic seal *Encapsulation
* Surface mount * Ceramic or plastic * Leadless ceramic chip carriers
* Conformally coated

THIN-FILM

* 100% vertically integrated design, production and testing facilities.
* CAD/CAM work stations for fast and accurate design of complex microwave circuits.
* Automatic In-Line sputtering machine.
* E-gun deposition system, metallization evaporation system, complete gold plating system, precision mask aligner, automatic dicing and drilling equipment, etc.

We provide metallized substrates and fabricated thin-film circuits for ultra high temperature application up to 450 C, every substrate and circuit offer the same high performance characteristics for your applications.

SUBSTRATE MATERIALS
* 99.6% alumina as fired or polished, 1" and 2" square, 0.010", 0.015" and 0.025" thick.
* Quartz, fused silicas, ferrites and beryllium oxide are accepted.
* Flat and rectangular.
* Size between 0.5" to a maxium of 2" for both length and width.

SPUTTER METALLIZATION
* Use TaN/TiW/Au metallization.
* TaN(Resistive layer):Heat-treatable to 50 ohms/Sq.
* TiW(Barrier layer): 500A±100A.
* Au(Conductive layer): 6000 A±10%,99.99% gold.

MASKS
* Mask making service.
* Emulsion mask: 3" x 3" with 2" x 2" pattern.
* 10X,20X,30X and 40X magnification.

ELECTROPLATING
* 99.99% gold.
* plated to 4 microns ±20%.
* Plated to customer specifications.

CIRCUIT FABRICATION
* Etch resolution: Gap width to 0.0005", line width to 0.0015".
* Precision substrate cutting with automatic dicing saw.

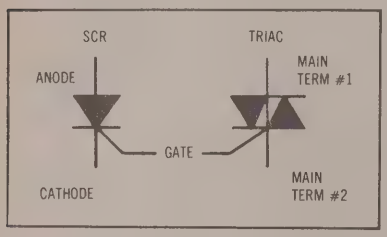
MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors*. Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/ reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

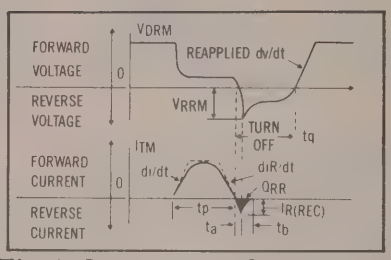


Fig. 1. Concurrent voltage and current waveforms

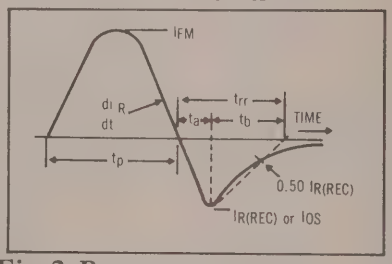

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$: *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature*.

$T_{J(MAX)}$: *Maximum allowable junction temp.*

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

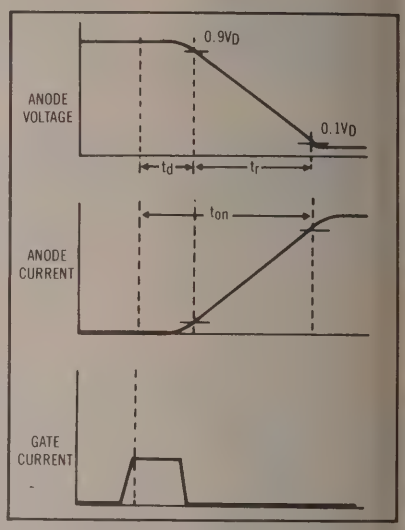

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time.* Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

t_r: *Rise time*. Time between principal voltage dropping from one value to a second lower value when thyristor turns from OFF to ON. (Fig. 3)

t_{rr}: *Reverse recovery time*. (Fig. 2)

V_{DRM}/V_{RRM}: *Maximum repetitive peak OFF state/reverse voltage* excluding non-repetitive transients.

V_{DSM}/V_{RSM}: *Maximum nonrepetitive peak OFF state/reverse voltage*.

V_{FM}/V_{TM}: *Maximum forward voltage drop* at a specific forward current and case temp.

V_{GDM}: *Gate nontrigger voltage*. Highest dc voltage that will *not* cause thyristor to switch from OFF to ON.

V_{LATCH}: *Latching voltage*. Voltage required for thyristor to latch ON at a given gate current and junction temp.

$V_{TM(DYN)}$: *Dynamic ON state voltage*. Transient ON state voltage of thyristor when triggered into conduction for a given load and time.

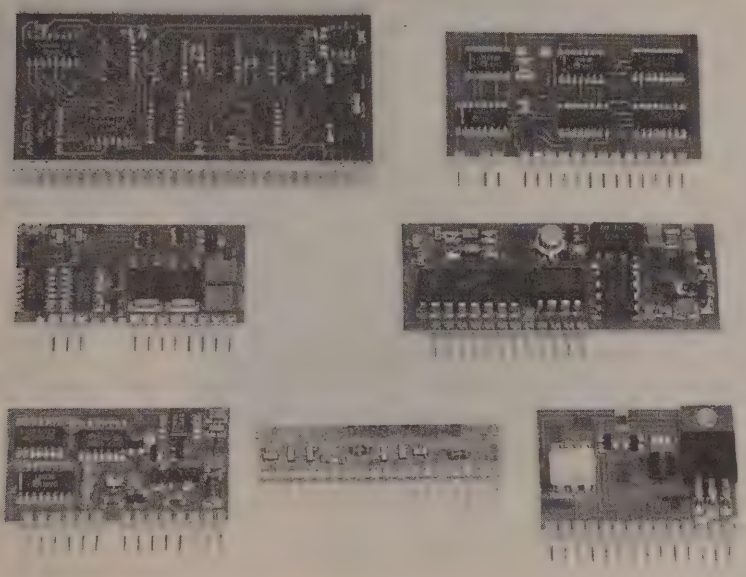
GORDOS

CUSTOM HYBRID CIRCUITS

ADVANCED THICK-FILM HYBRID CIRCUITS FROM GORDOS — A LEADER IN POWER HANDLING AND THERMAL MANAGEMENT

If one of your designs requires greater levels of reliability or miniaturization, talk with a Gordos Representative about the advantages of hybrid construction:

- More precise, flexible design through specification of optimum component values.
- Fewer discrete interconnections and parts.
- Reduced physical dimensions and weight.
- Less parasitic coupling capacitance.
- Improved thermal tracking, dissipation, and stability.
- Better noise immunity, even in harsh signal environments.
- High volume production with tighter manufacturing tolerances.
- High dielectric isolation.
- Functional trimming of individual circuits for improved performance and accuracy in the field.
- Better repeatability (electrical uniformity) from circuit to circuit.
- Superior reliability, even when subjected to severe physical or thermal shock or vibration.



Engineering
- In-depth resources in analog, digital and packaging design
- Dedicated to excellence — proven by design performance
- CAD-CAM systems for efficiency
- Environmental testing of prototypes insures that design criteria are met

Pre-production
- Large scale artwork allows uncompromising accuracy
- In-house photographic reduction and film processing yield optimum detail
- High resolution screen fabrication system assures ultimate precision

Manufacturing
- Automated, environmentally controlled screen printing and firing process guarantees uniformity
- Microprocessor controlled, multi-zone conveyor furnaces for precise firing
- Computerized laser trimming of resistors for optimum circuit performance
- Precisely controlled vapor phase soldering guarantees reliable solder connections
- Fast turnaround.

Quality
- For high reliability applications pre-screening of components is available
- Computerized, multi-stage testing controls quality at every manufacturing stage
- Burn-in and 100% load testing assure a flawless finished product

Whether your needs are design-to-spec or build-to-print, we pledge that we will provide you with the finest engineering, manufacturing, quality assurance and customer service in the industry. Contact Gordos today. Put a winner to work for you.

See Gordos Relays in Section 4500 and Gordos Data Acquisition & Control Products in Section 2325.
Products and specifications subject to change without notice.
Consult factory for application assistance.

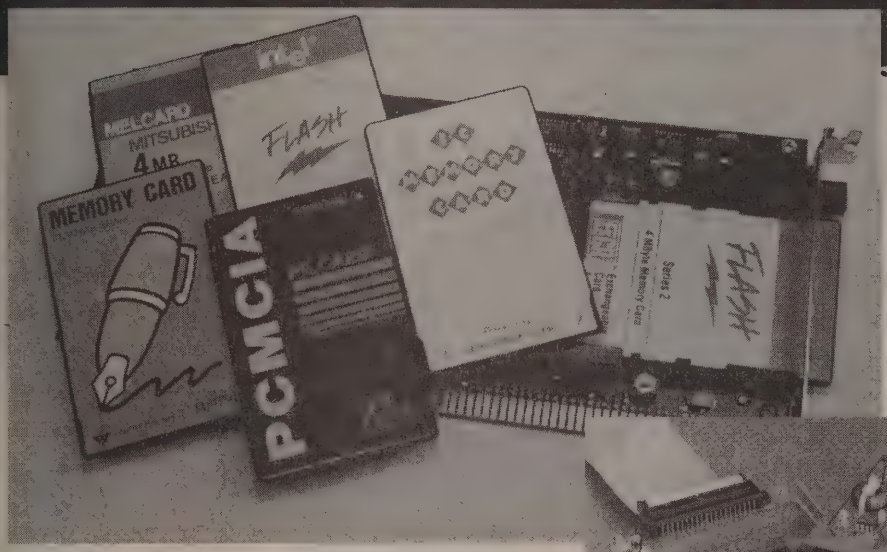
COMPLETE LINE OF IC CARD CONTROLLERS, VERIFIERS/TESTERS



ExCA/PCMCIA/JEIDA IC Card Functional Verifiers/Testers

1-800-541-3526

MSD3 offers a range of IC Card functional verifiers, testers and operators for the ISA/EISA/SCSI Bus structures, including systems for 3 volt Memory and I/O cards.

These systems are ideal for the end user, OEM and VAR alike, accepting 2 Type I or Type II cards or 1 Type III Disk Drive in the same space.

Anywhere stringent quality control, critical performance and complete customer satisfaction is required, MSD3 products are the answer.

Applications include medical, military, aerospace, process control, etc.

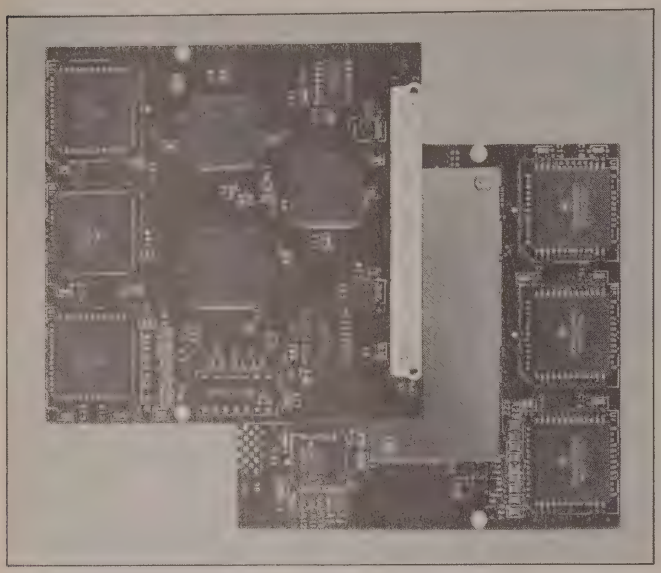
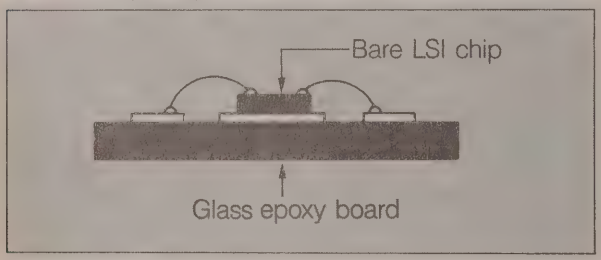
MULTICHIP MODULES for high power & high frequency



As a leading manufacturer of MCMs, FDK can meet your exact needs for high quality customized circuits. Just give us your specifications, and we'll do the rest.

- Combination technology of COB and COM
  (COB: Chip on board
  COM: Chip on metal)
- Low thermal resistance
- 6 to 10 layer substrate
- Fine pattern pitch
  (4 mill)
- High reliability
  (85°C, 85%, 1000H clear
  PCT121°C 2atm 96H clear)

● COB (Chip-on-board) technology



User benefits
- Reduction of product size and weight, made possible by larger-scale integration
- Low cost
- High mechanical strength

● COF (Chip-on-flexible-board) technology

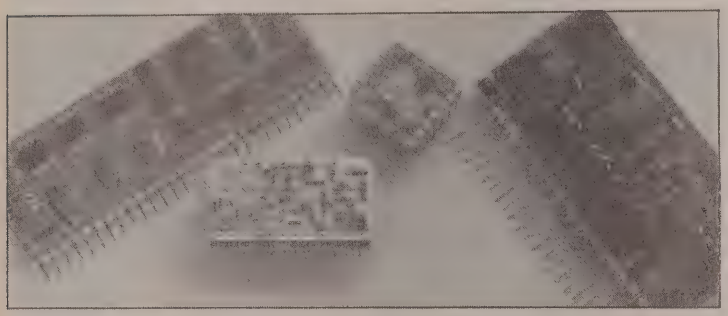
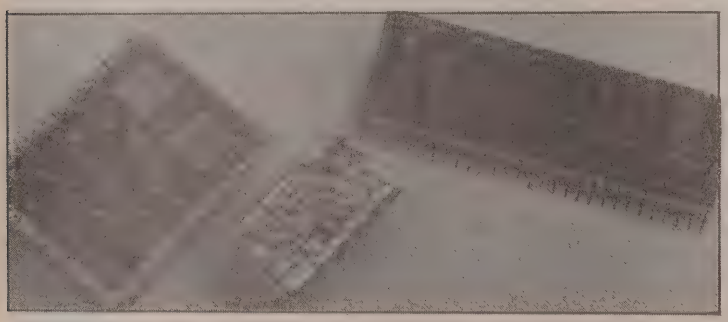
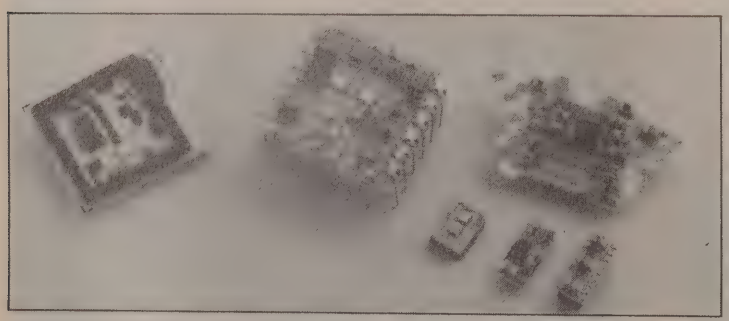
Custom Hybrid Design and Production Service



Hybrid analog and digital circuits for industrial equipment such as analog controls, pressure sensors, signal amplifiers and optical sensors.



Digital hybrid circuits in computer peripherals such as printers, disk drives and optical scanners.



Miniature hybrid amplifiers and control circuits used for medical equipment such as hearing aid amplifiers, intravenous drip sensors, ultrasound imaging, blood sensors and nerve stimulators.

For more than 25 years, HEI, Inc. has excelled in the manufacture of custom thick-film hybrid circuits. HEI specializes in "ultra-miniature" hybrids, having produced some of the smallest outlines in the industry. We offer our customers close liaison and professional services from initial design through final production.

HEI's advanced automation technology ensures that our customers consistently receive the high quality products they expect. Our separate prototype facilities combined with short- and long-run production capabilities give customers the convenience of "flexible scheduling" and short lead times to meet the demands of JIT and other ship-to-stock programs.

Throughout our company, we share one goal: exceeding your expectations.

Custom Hybrid Design and Production Service

FACILITIES

- 22, 000 sq. ft. state of the art manufacturing facility in Minneapolis, MN. An additional 12,000 sq. ft. in Sauk Centre, MN.
- Separate proto development lab for quick turn-around.

ENGINEERING DESIGN

- Multiple CAD systems for fast, accurate and efficient circuit layout.
- Engineering resources for both analog and digital designs.
- Preliminary layouts and designs are discussed with each customer to ensure conformance to requirements.

PROCESSES AND CAPABILITIES

- Palladium silver, gold and copper printing processes.
- Chip-and-wire, flip-chip and surface mount semi-conductor integration.
- Double-side resistor printing and multi-layer processing with through-hole via technology.
- Active circuit resistor trimming to a voltage, current or frequency.

MANUFACTURING

- Clean room printing, firing and trimming of all circuits.
- Totally automated component integration, bonding, dicing and testing.
- Manufacturing processes to accommodate low to high volume requirements.

TESTING

- All parts are functionally tested to customer standards.
- Temperature cycling, burn-in, vibration, humidity and testing under load conditions can also be supplied.

STATISTICAL PROCESS CONTROL

- HEI employs statistical process control to monitor all critical processes and to ensure that parts consistently conform to established quality standards.

QUALITY

- HEI provides the highest standards of quality from the initial design consultation through manufacture and delivery of the final product.

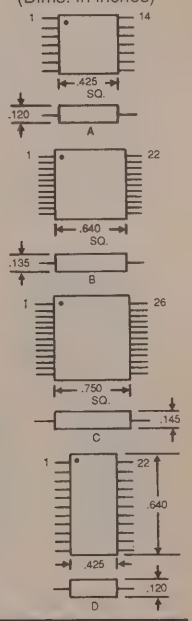
NOTES:
1. PD111 is available in a smaller package (.380" x .380" x .090")
2. Different output are available for PD211:
   PD211B: positive output current + 30 mA ± 20%
   PD211-10: negative output voltage -10V ± 20%
   PD211-30: negative output voltage -10V ± 20% and negative output current -30mA ± 20%
   Any combination of the above is available
3. Different output current are available for PD311:
   PD311B: ± 40mA (MIN), ± 60mA (MAX)
   PD311C: ± 10mA (MIN), ± 15mA (MAX)
   PD311D: ± 24mA (MIN), ± 12mA (MAX)
   PD311E: ± 8mA (MIN), ± 12mA (MAX)
4. PD630 and PD1050 are with decoder input.

Packages

(Dims. in inches)



MONOSTABLE MULTIRIGGER (P/N CP8079)

Features

- Hi-Rel Thin Film Microcircuit
- Three Trigger-Outputs
- To-5 Package
- MIL-STD-833 Screening

Absolute Maximum Ratings

- Supply Voltage +8.0 VDC
- Operating Temp. -55°C to +125°C
- Storage Temp. -65°C to +150°C

Specifications

- Supply Voltage +6.0 VDC (max)
- Power Dissipation +42 mW (max)
- Input Voltage +5 V (max)
- Input Pulse Width to Trigger 100 ns (min)
- Output Pulse Amplitude +4.0 V (min)
- Output Rise Time 100 ns (max)
- Output Fall Time 20 ns (max)
- Minimum Amplitudes to Trigger +3 V, -1.5 V, +2 V
- Minimum Voltage to Inhibit +2.0 V
- Output Impedance 1000 ohms (max)

Pin Connection

Pin	Connection	Pin	Connection
1	INPUT	5	INPUT
2	INPUT	6	+6 V
3	NC	7	OUPUT
4	GND	8	+6 V

Quality: Micro-Precision Technologies Inc. quality organization maintains a system at a high level of screeing which includes the following:

- Continuous In-Prosess Inspection
- Stabilization Bake (150°c)
- Temperature Cycling
- Thermal Shock
- Constant Acceleration
- Fine Leak Test
- Gross Leak Test
- Burn in @ 125° for 160 hrs.
- Final Electrical Testing
- External Visual

MICRO-PRECISION TECHNOLOGIES' large capacity, high through-put, load-lock production system with: Microprocessor Controller, DC or RF Planar, Magnetron Sputtering, RF Etching and Substrate Heating to 400°c.

COMPLETE PROCESSING: Photo Coating; Photo Imaging/Etching under class 100 Laminar Flow in a Modern Class 1000 Facility.

PRECISION MASK ALIGNMENT TOOLING for Quality High Resolution Printing (contact or proximity) includes: a) Regulated UV/Deep UV Exposure, b) 4.2" Square Collimated Beam, c) Zeiss MJM Optics for Accurate Alignment

AUTOMATIC DICING SAW provides precision Substrate Sawing and Scribing to .0001 inch tolerances.

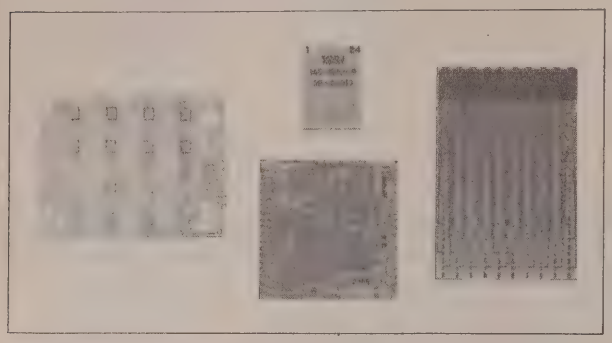
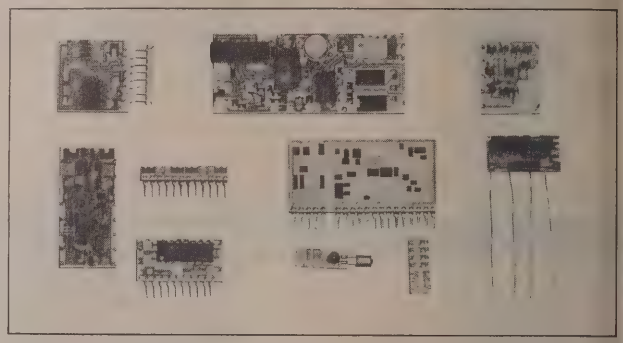
HYBRID THICK FILM TECHNOLOGY

FEATURES

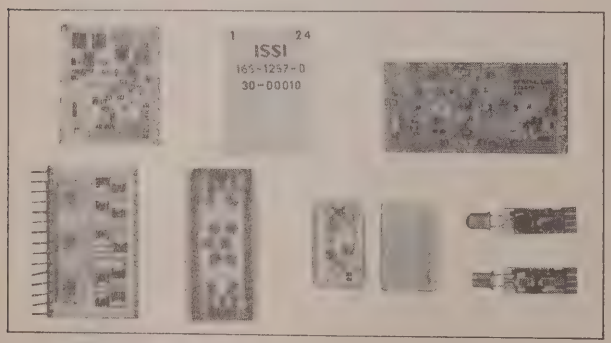
- one time insertion costs
- functional modularity
- high quality components
- compact
- low profile
- low mass
- high performance
- small
- extreme temperature operating range
- military specification capabilities



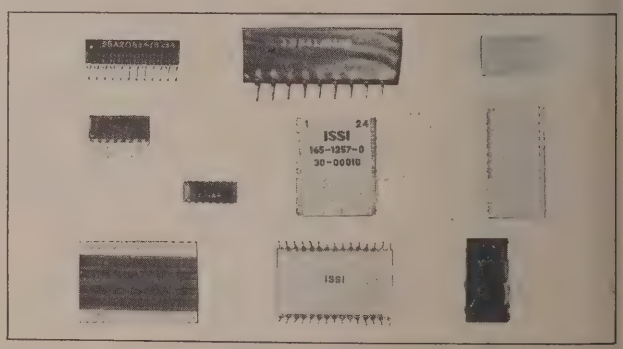
METALIZED SUBSTRATES — Simple or complex, single or multi-layer conductor patterns with Pd. Ag (Palladium Silver), Pt. Ag. (Platinum Silver), Au, (Gold), Pt. Au. (Platinum Gold) inks. Insulation with high temperature glass dielectric or low temperature glaze. Film Resistors from 1 ohm to 150 megohm, tolerances to ±0.1%, T.C.R. to 50 ppm, 1/10 w to 10 watt power dissipation, laser or abrasive trimming.



SOLDER REFLOW TECHNOLOGY — Compact networks with thick film resistors, IC packages, chip capacitors, inductors, discrete components, SOT package, diode bridge assembly, high and low temperature solder, standard or custom pinouts. Special devices with photo-transistors, LED's and functional sub-assemblies.



CHIP AND WIRE TECHNOLOGY — Microcircuit assembly of functional thin film integrated circuit or component chips into operational devices. All available IC & component chips assembled to a thick film circuit by solder or epoxy bonding. Chips wired into circuit with either gold or aluminum wire. (Thermocompression or thermosonic wire bonding). Special handling for static control. Components actively or passively trimmed to guarantee functional specifications.



CUSTOM PACKAGES — Single-in-line or Dual-in-line pinout packages, conformally coated, metal can, plastic or ceramic covered and sealed. Customer markings as well as manufacturer's identification for traceability. Leak tested, temperature cycling and burn-in before final test to insure reliability. Heat sink attached to either alumina or beryllium oxide to obtain maximum power dissipation.

TECHNICAL SERVICES

• Circuit design • layout (including conversion of existing circuitry to thick film technology) • material selection • rubylith production • screen fabrication • product tooling • product testing • and building to print. Testing includes functional electrical and mechanical parameters • burn-in • leak testing • and temperature cycling.

APPLICATIONS

• Memory • logic • linear circuits • A-D • D-A • timing • filters • isolation • pulse shaping • impedance matching • signal generation • switching • sequencing • and many other medium range energy dissipation functions or a combination thereof.

ISSI MILITARY SPECIFICATION CAPABILITIES

MIL-I-45208 Inspection System Requirements

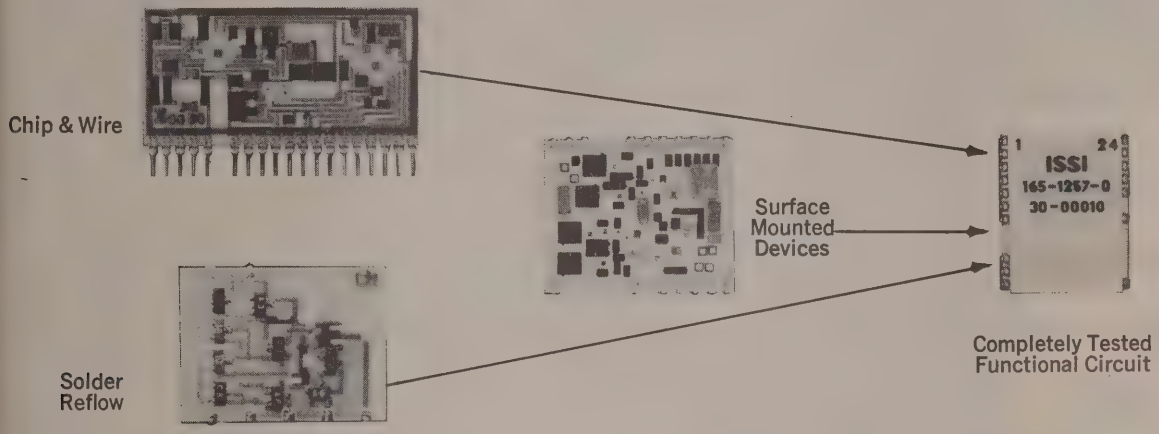
HYBRID THICK FILM PRODUCTS AND SERVICES

Custom and Surface Mount Packages



CUSTOM PACKAGES

- Single In-line (SIP)
  - High Temp Solder
  - Low Temp Solder
- Hybrid
  - Flat Packs
- Dual In Line (DIP)
- Surface Mount
  - PCB Base
  - Ceramic Base
  - (See opposite page for details)
- Multi-layer Circuit
- Encapsulated
- X-tal Can Covers
- Ceramic Cover
  - High Temperature Sealant
  - Low Temperature Sealant
- Plastic Covers

CUSTOM COMPONENTS

- Custom Thick Film Metallized Substrates, Pd Ag, Pt Ag, Au, Pt Au, Dielectric, Glaze
- Networks, Specialized Resistor
  - Resistor-Capacitor
  - Resistor-Capacitor-Inductor
  - EMI/RFI Shielded
- Special Devices
- Amplifiers
- Oscillators
- Time Base Modules
- A-D, D-A Converters
- Fiber Optic
  - (Transceivers, Bar Code Readers)
- Solid State Relays
- Microwave
- Control Circuit
- Display Panels

TECHNICAL SERVICES

- Circuit Design
- Circuit Layout (Includes conversion to Thick Film)
- Material Selection
- Create Rubyliths
- Component Specification
- Tooling
- Product Testing
- Build to Print

TECHNICAL CAPABILITIES

- Solder Reflow
  - IC Packages, Discrete Components (Capacitors, Bridges, L E.D.'s etc.)
- Chip and Wire
  - All Component Chips
  - All Available Integrated Circuits
  - Thermo-Compression Bonding (Au Wire)
  - Thermo Sonic Bonding (Au Wire)
  - Ultrasonic Bonding (Al Wire)
- Special Static Handling
- Resistance & Capacitance Trimmed (Active and Passive)

MILITARY SPECIFICATION CAPABILITIES

- MIL-I-45208 Inspection Systems Requirements

CUSTOM THICK-FILM HYBRIDS
interpoint
interpoint
MIL-STD-1772 Qualified

R E L I A B I L I T Y

20 Years of Hi-Rel Expertise

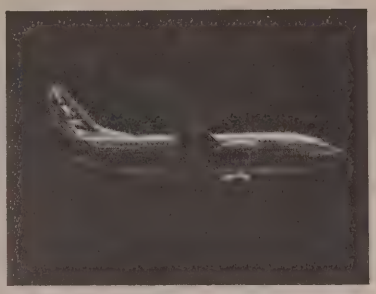
Interpoint Corporation is the premier world-wide supplier of thick-film hybrids for high reliability electronic applications. For over two decades it has proven itself by building custom microcircuits for the most demanding applications—commercial and military aircraft, computers, medical electronics, missile systems, satellite payloads.

Interpoint is a dedicated hybrid manufacturer—our entire corporate mission is design and production of superior microcircuits. Founded in 1969 as Integrated Circuits Incorporated, Interpoint was one of the first suppliers to offer full certification and qualification to the highest quality standards under MIL-STD-1772—and one of the first to implement Statistical Process Controls and Computer Integrated Manufacturing.

The Choice is Yours

Interpoint offers the system designer more choices than any other microcircuit manufacturer.

- Choose domestic manufacturing in our MIL-STD-1772, 50,000 square foot Redmond Washington plant. Or pick cost effective off-shore production in our 40,000 square foot, military quality facility in Taiwan.
- Select test standards—up to full MIL-STD-883C test procedures are available in-house as well as custom screening to your own specifications.
- Choose package styles, from full hermetic welded cases to cost effective ceramic and plastic potted styles.
- Select the delivery system—large or small orders, inventory stock or just-in-time.



In programs that need the highest levels of reliability, Interpoint hybrids are the first choice. Interpoint hybrids are used on virtually every airliner in the West, the most advanced fighter aircraft, in medical electronics, computers, and industrial controls.

Short Lead Times

Interpoint has become one of the acknowledged industry leaders in applying systems management techniques to the hybrid process—from initial design and analysis through production and final test. This expertise means high reliability, fast turn-around, and precision engineering for each circuit.

Interpoint can produce a prototype of your circuit in as little as 8 to 12 weeks.

PROVEN RELIABILITY: WITH THE INDUSTRY'S WIDEST CHOICE OF DOMESTIC AND INTERNATIONAL MANUFACTURE.

A Single World-wide Quality Standard

Interpoint is the only thick-film hybrid supplier to provide both the highest standards of quality and a choice between domestic and international production.

Our US facility is fully qualified under MIL-STD-1772 and the company is listed in MIL-M-38510G's Qualified Manufacturer's List (QML).

We apply the same quality standards —the same source controls and process requirements—to our Interpoint manufacturing facility in Kaohsuing, Taiwan. This facility has been audited and approved for military program level production by some of the largest suppliers of Hi-Rel electronics.

Interpoint offers a complete in-house screening capability that includes full compliance with MIL-STD-883C method 5008. Screening includes electrical test over temperature; visual inspection; gross and fine leak tests; stabilization bake; temperature cycling, constant acceleration, and burn-in.

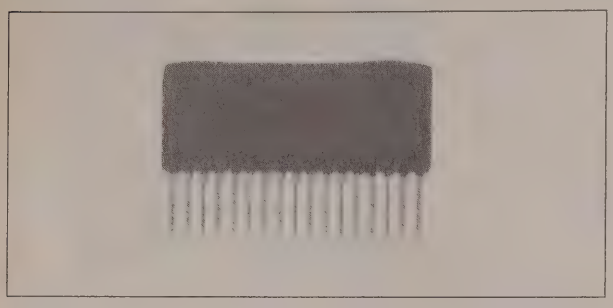
custom circuit module design (hybrid ICs)

MURATA ERIE NORTH AMERICA



Murata Erie offers custom Thick Film Circuit Module design engineering and production capabilities. Our advanced computer aided design and manufacturing (CAD/CAM) systems allow us to respond to your various needs with quality and speed. If you have an application that could use our established Thick Film Technology, please contact us for engineering consultation.

ORDERING INFORMATION

Please provide the following information when inquiring about custom modules:

- Functional description of circuit
- Application
- Resistor and capacitor values and tolerance if known
- Manufacturer and part number of all active devices (Semiconductors)
- Package type preferred (SIP or DIP or SMD)
- Package dimensions (LxWxH)
- Your target cost for module
- Your development schedule requirements
- Your production schedule
- Expected annual usage (EAU)

SURFACE MOUNTABLE COMPONENTS FOR CIRCUIT MODULES

MOUNTABLE COMPONENTS

SEMICONDUCTORS

A highly functional and highly integrated circuit can be realized by integrating various chip components and semiconductors on one substrate. Murata Erie not only has the technology to put these components together on the substrate, but Murata Erie also supplies the components. Again, this relates to the vertical integration theme of Murata Erie.

RESISTORS

Resistance Range	10Ω to 10MΩ
Tolerance	±10%, ±5%, ±2%, ±1%
Power Rating	Max. 1W/Element
TCR	±100, ±200ppm/°C

CAPACITORS

Chip Monolithic Ceramic Capacitors	Cap. Range	1pF to 2.2μF
	Tolerance	±1%, ±2%, ±5%, ±10%, ±20%, +80/–20%
	TCC	COG, X5R, Y5V
	Voltage	25V DC, 50V DC, 100 V DC
Tantalum Capacitors	Cap. Range	0.1μF to 100μF
	Tolerance	±10%, ±20%
	Voltage	4V to 35V DC

INDUCTORS

Inductance Range	0.15μH to 2.2mH
Tolerance	±5%, ±10%, ±20%
Q	Min. 20
Current	35mA to 800mA

FILTERS

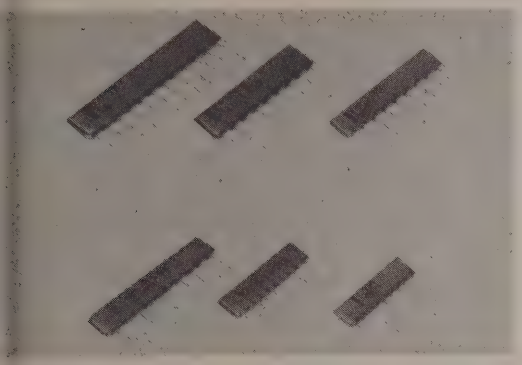
AM	Center Frequeny (fo)	Within 455±2.0KHz
	3dB Band Width	Within 4.5/5.5KHz
	Insertion Loss	Max. 6dB
	Spurious Attenuation	Min. 10dB (at f0 to 2.2MHz)
	I/O Matching Impedance	3.0KΩ
FM	Center Frequency (fo)	Within 10.640 to 10.760MHz±30KHz
	3dB Band Width	230/280±50KHz, 180±40KHz
	Insertion Loss	Max. 7dB
	Spurious Attenuation	Min. 25dB
	I/O Matching Impedance	330Ω
EMI	Capacitance	22pF to 22000pF+50%/–20%
	Rated Voltage	100V DC
	Rated	300mA DC
	Insulation Resistance	Min. 10000mΩ
	Resistance (DC)	Max. 0.3Ω

RESONATORS

Frequency Range	2.0 to 32.0MHz
Oscillating Frequency Initial Tolerance	±0.3%, ±0.5%
Oscillating Frequency Tolerance Stability	±0.3%, ±0.5% (–20°C to +80°C)
Aging Tolerance (10 Years at Normal Temp.)	±0.3%, ±0.5%

circuit modules (hybrid ICs)
RC and C modules

MURATA ERIE NORTH AMERICA



These products represent our most standard Hybrid line. Consisting of standard Resistor/Capacitor and Capacitor network circuit configurations, the customer decides the individual component values. Once a customer determines the ideal values of capacitor and resistor, Murata Erie can provide these products in mass production quantities.

Contact Murata Erie Circuit Module Group For Design Options.

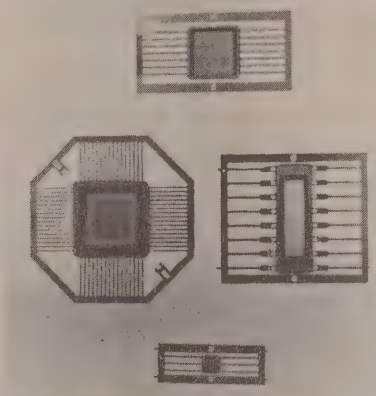
GLASS FLATPACKS & CHIP CARRIERS

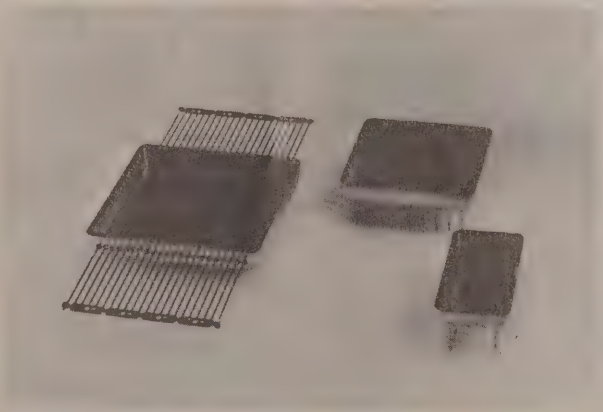


- Computer Aided Design
- Moderate tooling for custom packages
- Sealed by reflow soldering

Features

- Over 460 tooled variations
- Body sizes from 1/8″ square to 1″ square
- Lead counts up to 148
- Lead spacing .025, .030, .040, .050, .100
- Base materials ASTM F-15, Alumina, Metalized Alumina, Beryllia
- Custom lead forming (leaded chip carrier or gull wing)
- Gold, Nickel, Silver, and custom plating
- Matching combination lids available

METAL PLUG-INS & FLATPACKS



- Custom variations invited
- Used to enclose large, Hi-Rel hybrids
- Sealed by reflow soldering or seam welding

Features

- Unibody™ one piece case (ASTM-F-15 Alloy)
- Body sizes from .625 square to 1.97 × 2.97 available
- Lead spacings: .100 for Plug-ins .050, .100 for flatpacks
- Lead forming available
- Round or ribbon leads available
- Selective ground pins available
- Gold, Nickel, and selective plating
- Matching step lids available

Noritake

Thick Film Circuit Substrates

More companies are now switching from standard circuit boards to Noritake Printed Thick Film Substrates.

- Better Heat Dissipation
- Smaller Geometries Improve Performance
- Better Reliability in High Temperature Environment
- Reduce Costs By Adding More Functions to One Circuit
- Smaller and Tighter Configurations

Noritake's experience with fired ceramics dates back to 1904. For over twenty years, Noritake has been a major supplier to Automotive, Computer and Telecommunications customers for printed thick film substrates.

Noritake's state-of-the-art technology produces thick film multilayer substrates with resistors. Ultra modern, fully automated facilities have the capacity to manufacture over 6 million pieces per month.

Noritake also offers super fine line thick film circuit substrates with fine line density that appears only in thin film products. Thick film products provide superior conductivity at lower costs than thin film products.

Call 1-800-837-4727.

Noritake Co., Inc.
2635 Clearbrook Drive
Arlington Heights, IL 60005

Noble Conductor Thick Film Substrate

Item			Specification		Condition
Conductor	Resistivity		Pd-Ag 15 ~ 50mΩ/□ Pt-Ag 2 ~ 4mΩ/□ Au 2 ~ 4mΩ/□		
	Adhesion		Initial	≧2.5kgs	2mm Square Pad 0.6φ Tinned Copper Wire
			Aged (150℃, 48hrs)	≧2.0kgs	
	Solder Leach Resistance		Solder Leach≦40μm		Line Width: 500μm Solder:62Sn/36Pb/2Ag 235℃, 5sec
Item			Preferred	Acceptable	Condition
Resistor	Resistance Value		10Ω~2MΩ	20mΩ~100MΩ	RuO_2 System
	TCR		±250ppm/℃	±100ppm/℃	-55 ~ 25℃, 25 ~ 125℃
	Tracking TCR		±100ppm/℃	±10ppm/℃	-55 ~ 25℃, 25 ~ 125℃
	Dissipation		150mW/mm²	-	
	Resistance Value Tolerance		≧±1.0%	±0.3%	
	Stability	Thermal Shock	≦±1.5%	-	430℃, 5mins
		Humidity	≦±2.0%	-	85℃, 85%RH, 1000hrs
		Thermal Cycling	≦±2.0%	-	-40℃~+150℃,500 cycles
		High Temp. Storage	≦±1.5%	-	150℃, 1000hrs
Crossovers	Insulation Resistance		≧100MΩ	-	Measure Voltage 100V

Non Noble Conductor Thick Film Substrate

Item			Specification		Condition
Conductor	Resistivity		Cu:≦2mΩ/□ (Fired Thickness 20μm)		
	Adhesion		Initial	≧2.5kgs	2mm Square Pad 0.6φ Tinned Copper Wire
			Aged (150℃, 48hrs)	≧2.0kgs	
	Solder Leach Resistance		Solder Leach≦25μm		Line Width: 500μm Solder:62Sn/36Pb/2Ag 235℃, 5sec
Item			Preferred	Acceptable	Condition
Resistor	Resistance Value		10Ω~ 2MΩ	-	LaB_6,SnO_2 System
	TCR		±300ppm/℃ ±150ppm/℃	-	-55 ~ 25℃, 25 ~ 125℃
	Dissipation		40~600mW/mm²	-	
	Resistance Value Tolerance		≧±1.0%	-	
	Stability	Solder Dipping	≦±1.5%	-	235℃,10sec
		Humidity	≦±2.0%	-	85℃,85%RH, 1000hrs
		Thermal Cycling	≦±1.5%	-	-40℃~+150℃ 500 cycles

NWμ

CUSTOM THICK FILM HYBRID CIRCUITS

Northwest Microcircuits began operations in 1983 after discovering a growing demand for high reliability custom thick film hybrids in the Pacific Northwest. Our experiences since that day have brought us from simple resistor networks to thick film multilayer chip-and-wire hybrid circuits. Our circuit applications have varied from switch attenuators, RC networks, digital dividers, to prosthesis control circuits for the medical industry and the number of applications continues to grow. We recognize the continuing demand for quality thick film hybrid circuits in either prototype or production quantities. We have no minimum quantity limitations and have low non-recurring engineering charges. For your next thick film hybrid or special packaging application let our experience and services work for you.

Technical Services and Process Capabilities

- Complete design and manufacturing services; conductor/resistor layout; screen fabrication; CAD generated drawings; we will work from customer schematics, layouts, or film positives.
- Thick film screening and firing of conductor, resistor and dielectric materials; 5 mil lines and 5 mil spaces; Ag and Au based conductors; 10Ω/■ to 10MΩ/■ resistor inks; down to 50 PPM/°C TCR.
- Resistor trimming to .1% tolerances; abrasive or laser; active or passive; negligible post-trim drift.
- Die attach and wire bonding of semiconductor die; gold or aluminum wire bonding from .7 mil to 3 mil wire diameter.
- Hermetic or epoxy sealing; metal, plastic, or ceramic packaging; customer PN marking; conformal coating.
- Automatic pick-and-place of surface mount components on ceramic or PCB; reflow soldering.
- Functional and qualification testing to commercial or military specification.

Raytheon

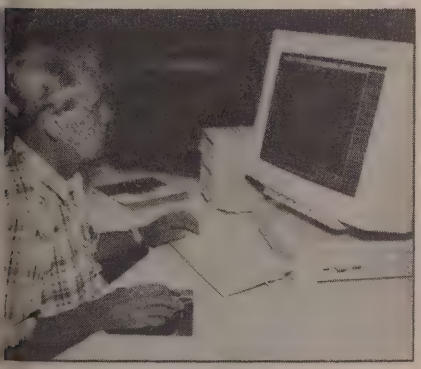
Quincy Operation Microelectronics Facility

Raytheon Company's Quincy Operation is the Raytheon Microelectronics Center of Excellence for high reliability electronic components. Product lines include hybrid digital and microwave modules, analog and power modules, Multichip Modules (MCMs), High-Density Power Supplies, Multilayer Substrates, Advanced Substrates, Microwave Integrated Circuits (MICs), Surface Acoustic Wave (SAW) Devices and Display Devices.

Raytheon Quincy Operation . . . Microelectronics Center of Excellence

Raytheon Full Service Support . . . From Design to Quality Production

The Quincy Operation is supported by other Raytheon Divisions and laboratories to ensure the latest advances in materials, integrated circuit technology, and systems design are available for your applications.



Computer Aided Engineering/ Computer Aided Design (CAE/CAD)

We can focus our full computer aided engineering/design (CAE/CAD), development and support services to meet your advanced system and component production needs. Let our Total Quality Management work for you.

Raytheon Company Produces Quality Microelectronics for Military, Space and Commercial Markets

The Raytheon Quincy Facility, Certified MIL-STD-1772, includes over 44,500 sq. ft. Class 100,000 Clean Room, and complete engineering and environmental test and evaluation equipment. Automated assembly and test support production capacity of over 400,000 hybrid circuit assemblies per year. Reliability standards for Raytheon hybrid microelectronics products adhere to MIL-HDBK-217 and MIL-SSTD-785B. Screening per MIL-STD-883 is accomplished in a dedicated Class 10,000 Clean Room area.

High throughput computer controlled robotic assembly includes machine vision.

Raytheon

LTCC - Low Temperature Cofired Ceramic

Raytheon Company, a leading supplier of high reliability microelectronics for military, space and commercial applications, now has Low Temperature Cofired Ceramic (LTCC) design, development and production capability. LTCC is an enabling technology for high density digital and microwave components. Raytheon's state-of-the-art LTCC processing facility consists of seven core manufacturing work cells supporting Tape Blanking, via Formation, Conductor Deposition, Lamination, Burnout/Cofire and Dicing.

LTCC Applications

LTCC is particularly useful in high density applications where surface interconnection and component space is limited. Advances in materials and processes now make LTCC the cost competitive choice for:

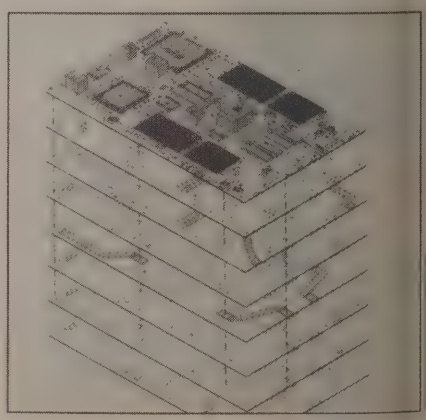
- Digital Multichip Modules (MCMs)
- Wideband RF Assemblies
- Transmit/Receive Modules
- Phased Array Radars
- Patch Radiators
- Conformal Array Architectures

High volume hybrid microcircuit production is conducted at Raytheon's Quincy Operation, the largest full service hybrid manufacturing facility in the world. The certified MIL-STD-1772 facility includes over 44,500 sq. ft. Class 100,000 Clean Room environment.

RF Receiver in LTCC Package

Raytheon Can Meet Your High Volume LTCC Production Needs

- Controlled Impedance Structures
- Up to 10 in. x 10 in. Format
- 5M mil Lines and Spaces on 3.5 mil Tape Layers
- From 6 to 40 Layers
- Complex Shapes/Profiles/Housings
- Laser Trimmable Buried Components
- 4 mil Electrical Layers
- Cofired and Postfired Paste Systems
- High & Low Temperature Solder Attach
- Thermal via Arrays for Power MMICs
- Electrical Performance Up to MMWave
- High Current Lines
- Microstrip to Stripline Transitions
- Design, Drafting, Assembly and Test



MultiLayer LTCC RF/Power Conditioning Substrate

Raytheon

Multichip Modules (MCM)

From the Total Quality Source

Raytheon MCMs . . . Complete System Solutions in a Package.

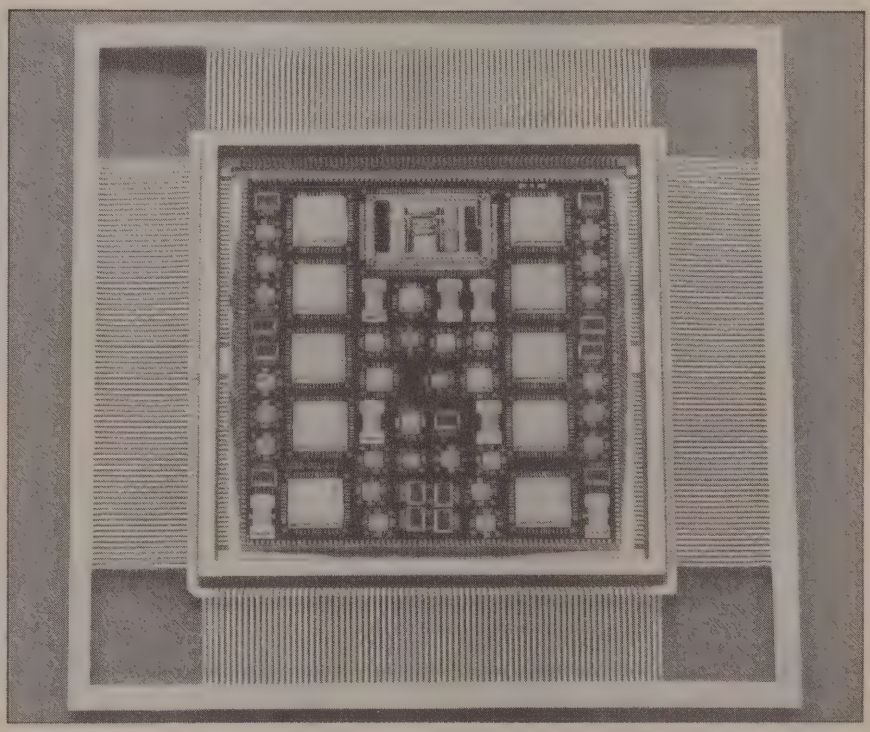
Raytheon Company, a leader in advanced electronics and systems for military, space and commercial markets, offers high quality Multichip Modules (MCMs) to meet your high performance system needs. Years of leadership in system integration, device, substrate and interconnect system development and manufacturing technology make Raytheon the premier source for your MCM applications. We offer turnkey MCM service, from design through Total Quality manufacturing and test. Let us put our strength on your most challenging MCM applications.

Complete MCM Solutions from the Total Quality Source

Come to Raytheon for Total Quality MCM solutions. We offer a full line of MCM products and services and can tailor a program to meet your speed, power, weight, and cost requirements. Raytheon MCMs include:

- High Density Memory Modules
- High Speed Digital Processors
- High Density Power Modules
- Integrated Multifunction Modules

You can use our advanced CMOS ICs, or other off-the-shelf ICs in our high performance MCM interconnect package.



Raytheon MCM-D Demonstrates 50Mhz Operation.

MCM Substrate Options

We build our MCMs from the ground up. Raytheon can design and manufacture your MCM application using high performance substrate and interconnect systems, including:

- Low Temperature Cofire Ceramic (LTCC) MCM-C
- High Temperature Cofire Ceramic (HTCC) MCM-C
- Thin Film Copper on Polyimide (Cu/pl) MCM-D
- Thin Film Copper or Aluminum on Silicon Dioxide ($Si0_2$) MCM-D
- Chip-on-Board MCM-L

Raytheon is also developing Diamond Substrate MCM-D for advanced, high power applications.

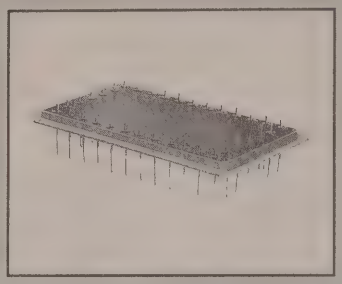
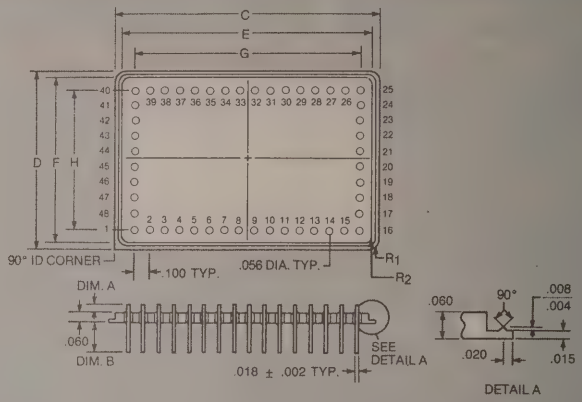
REEVES-HOFFMAN
DIVISION DYNAMICS CORPORATION OF AMERICA

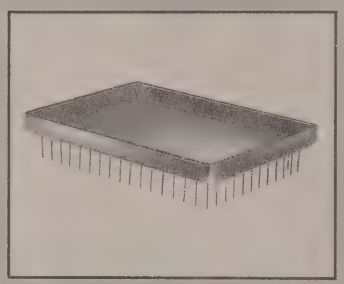
HERMETIC SEALS

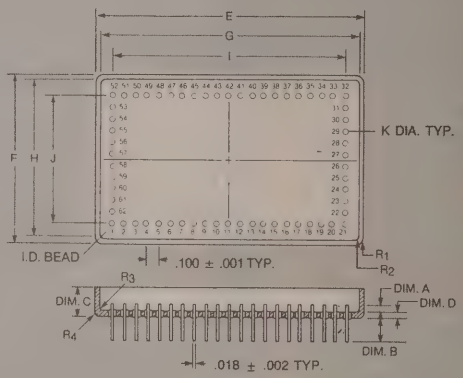
PLATFORMS
Kovar or CRS Material



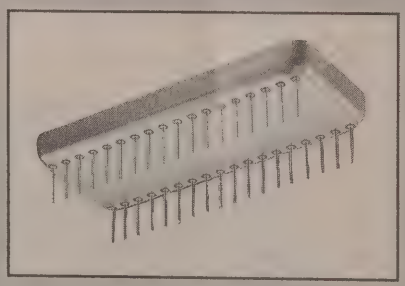


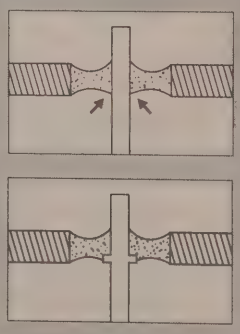
DRAWN TUB PLUG-INS
Kovar or CRS Material





SHOULDERED LEAD PLUG-INS





CONVENTIONAL LEAD:
Cracking can occur at the glass climb areas (miniscus).

REEVES-HOFFMAN SHOULDERED LEAD:
Glass seal terminates at the larger diameter pedestal portion of the one-piece lead.

Reeves-Hoffman has solved the common problem of meniscus cracks and chip-outs that occur during the handling of standard glass-to metal sealed packages in the production of microcircuits. With our new shouldered lead plug-in packages, you no longer have to worry about corrosion and salt spray failures due to exposed base metal.

The "shouldered" portion of the lead is actually a pedestal of metal around which the glass is sealed. The metal pedestal (or shoulder) strengthens the glass seal. Glass cracking and chip-outs caused by bending stress from the flexure of the lead are virtually eliminated. The result? No more salt spray failures!

For superior package durability and the confidence to meet the corrosion requirements your devices demand, contact Reeves-Hoffman for design details.

For further information or catalog, contact your Reeves-Hoffman representative or
Reeves-Hoffman Division, Dynamics Corporation of America • 400 W. North Street, Carlisle, PA 17013 USA • Phone 717-243-5929 • FAX 717-243-0079

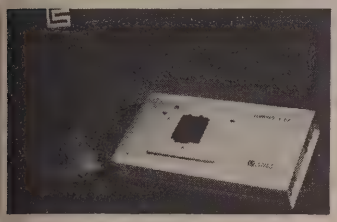
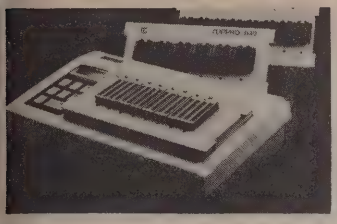
Who Is System General?

- We have been manufacturing Industrial-Grade Programmers Since 1984
- All Programmers Have Been Formally Certified By All Major IC Mfrs
- All Software Updates Are Provided FREE for the Lifetime of the Product
- We Specialize in the Support of Unusual Devices. Call for Quote
- Exclusive Auto Sense™ feature eliminates operational error
- Production Models Have the Highest Throughout in the Industry
- Our ZERO DOWN-TIME Policy Guarantees a Loaner Unit Within 24 Hours



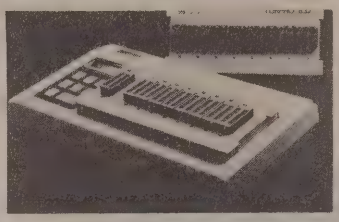
TURPRO - 1/FX

- Universal Production Pin-Driven IC Programmer
- Drop-In Replacement for Data I/O, w/Handler Interface
- Supports All Device Technologies and Packages to 84 Pins and beyond
- Vector Tests PLDs to 44 Pins
- Parallel Port File Downloads for High Speed Transfer



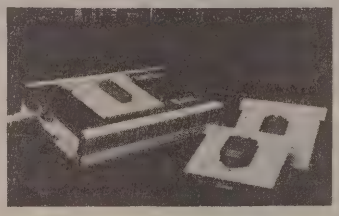
TURPRO - 840

- Universal Memory/Micro Gang/Set Programmer, 8 at a Time
- Supports 24, 28, 32, 40 & 44 Pin Devices in DIP/PLCC
- Stand-Alone and/or Computer Remote Via RS232C From PC
- Parallel Port File Downloads for High Speed Transfer
- Full Editor in Remote
- Device Auto-Id, Easy-To-Use



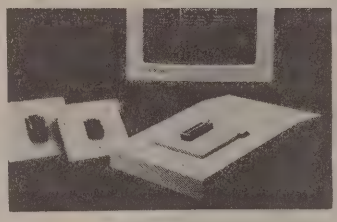
TURPRO - 832

- Universal Memory Gang/Set Programmer, 8 at a Time
- Supports 24, 28 & 32 Pin Devices in DIP/PLCC
- Stand-Alone and/or Computer Remote Via RS232C From PC
- Parallel Port File Downloads for High Speed Transfer
- Full Editor in Remote
- Device Auto-ID, Easy-To-Use



TURPRO - 1

- Universal Engineering Pin-Driven IC Programmer
- Drop-In Replacement for Data I/O
- Supports All Device Technologies and Packages to 84 Pins and beyond
- Vector Tests PLDs to 44 Pins



APRO

- Universal Engineering Memory/Micro Programmer
- Supports 24, 28, 32, 40 & 44 Pin Devices In DIP/PLCC
- Computer Remote Via RS232C From PC at 115.2 K Baud
- Full Editor
- Device Auto-Id, Easy-To-Use
- Only $895, Optional EPLD Support for $1,295

Raytheon

When Your Cathode Ray Tube Needs Are Very Special

Come to Raytheon for a wide range of special-purpose, high-performance Cathode Ray Tubes (CRTs), custom-designed for specific applications. Raytheon's Quincy Display Devices group can meet the most difficult specifications. CRTs for all military environments, air traffic control, simulators, projectors, marine radar and other high-performance commercial end uses are our specialty.

Raytheon offers extensive applications engineering expertise to tailor existing CRTs to meet your requirements, or to design various elements to meet your exacting specification.

Raytheon CRTs are available in quantities of one to thousands; from 'bare bulb' to packaged assemblies containing any of the following elements:

- Magnetic shield
- Contrast-enhancement filter
- Focus coil
- Flying leads
- Multi-pin connectors
- Protective panel
- Magnetic deflection coil
- Beam centering devices
- Encapsulation
- Input circuitry for arc protection
- Tension band or other implosion protection feature

Each of these features is carefully selected from standard product, or custom-designed to satisfy the user's requirements. Encapsulation may include two or more shock-absorbing materials (such as silicon) of differing densities, resilience, thermal conductivity and energy absorbing properties arranged to control weight distribution, minimize mechanical resonances, prevent electrical leakage and breakdown, facilitate heat dissipation, allow for differential thermal expansion, and cushion the CRT against shock and vibration.

Raytheon's RAYVUE™ organically compounded, narrow-pass contrast enhancement filters offer bandpass tailoring to match phosphor spectral response, providing the highest efficiency available.

Raytheon CRT assemblies are installed in nearly every military aircraft of the United States, NATO, and several other countries, as well as on surface ships, submarines, land vehicles and fixed ground-based installations, such as Patriot missile launchers.

Raytheon provides the 23-inch diameter tubes for the en-route air traffic control centers and the 16-inch CRTs for airport control towers ("BRITE") displays. Recently, Raytheon designed and built the high brightness ten and fourteen-inch-square "Tower Monitors" for the FAA Advanced Automation System air traffic control system. Many foreign governments also utilize Raytheon CRTs in their air traffic control systems.

Raytheon's Product Assurance department administers systems for rigorously maintaining the highest quality, reliability and safety for all its display products. The Quincy manufacturing plant is qualified to MIL-Q-9858A and MIL-1772. Our extensive in-house processes include an environmental laboratory for computer-controlled tests of shock, vibration (including random), humidity, temperature, altitude, pressure, salt spray, and solar radiation exposure. Nearby laboratories assist with tests of explosive atmosphere, sand and fungus growth.

Raytheon company is a Massachusetts-based Fortune-50 Company with operations equally divided between defense and commercial electronics, manufacturing, aircraft, major home appliances, construction and pollution control systems.

Call Raytheon when 'good enough' just won't do.

We Thrive On Challenges.

THIN-FILM MICROWAVE COMPONENTS

Metalized Plates

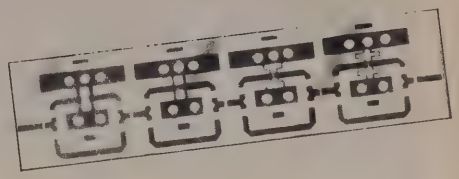
Electro-Films, Inc. offers a wide variety of metalized substrates suitable for Microwave Hybrid and Microwave Integrated Circuit applications. E.F.I.'s unique, economical fabrication process provides an exceptional range of dimensions, metalization and circuitry. Typical applications include: amplifiers, oscillators, UCO's, limiters, couplers, filters, attenuators, with frequency response thru 18 GHz and into the millimeter wave length range.

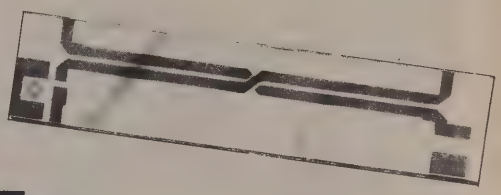
SUBSTRATE MATERIALS

- Alumina (as fired or polished) standard thicknesses of .010", .015", and .025", Dielectric Constant 9.8 typ. @ 25°C—10 GHz
- Quartz—BeO, Various thicknesses
- Sizes— Up to 4.1" x 3.3"

METALIZATION

- Sputtered in various combinations of NiCr, Cr, Ni, Au, Cu, TaN, TiW, Ti, Mo, Pd, TaW
- Electroplated — Cu, Ni, Au, up to 300 micro-inches
- Excellent adhesion (typically 7-10,000 lbs./in^2)
- One, Two or Six Surfaces
- Through Holes — metalized or non-metalized

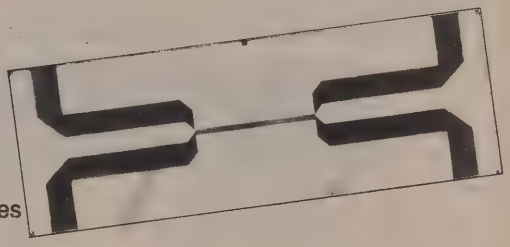




Patterned & Etched Substrates

Electro-Films, Inc. can handle the transition from a circuit requirement to a finished thin-film micro-component with in-house artwork and photo mask generation. E.F.I.'s processing techniques and quality control guarantee optimum quality in prototype or production quantities. E.F.I. is a thin-film specialist with unequalled productivity.

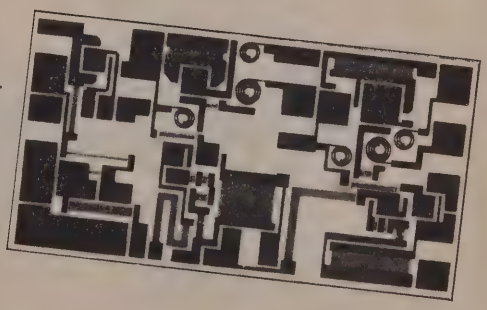
- Conductor only or resistor conductor patterns
- Resistive films — high stability NiCr or self passivating TaN
- In house laser machining for round or odd shaped substrates
- Metalized through holes
- Patterned edges
- Planar Inductors
- Lange couplers with fine line patterns, line and space tolerances as tight as ±.000050"
- Attenuator chips



Precision Chip Resistors

These precision Chip resistors are edge trimmed to tolerance providing excellent high frequency response. Edge trimming leaves a solid symmetrical block resistor void of any laser cuts eliminating the capacitive effects from a plunge or "L" cut trim.

- Resistance range 20ohm to 1 Kohm edge trimmed, 1 Kohm to 1 meg ohm non-edge trimmed
- Automatic laser trimming to ±.05% absolute
- Edge trim for high frequency applications
- Gold or solder coated terminations over a nickel barrier
- TCR ±50, 25 or 10 PPM °C — NiCr ±200, or100 PPM °C — TaN
- Single side or wrap around terminations
- Sizes — .020" x .040" to .100" x .100".



For other components, see our ad under "Resistor Products"

THE SOLID SOURCE

signal processing components dc to 8 GHz

In today's tough competitive military and commercial markets, Mini-Circuits provides you that extra edge. From your initial design to full-scale production, we offer total support to satisfy or exceed your specific requirements.

- **WIDEST SELECTION OF COMPONENTS** 14 product lines with more than 1,000 off-the-shelf catalog models.
- **EXTENSIVE DATABASE** actual performance data on all catalog items plus 5,000 custom models.
- **STRONG APPLICATIONS SUPPORT** an engineering team ready to recommend optimum catalog models, discuss custom designs, and provide solutions to your specific needs.
- **ONE-WEEK SHIPMENT GUARANTEE** catalog items will be shipped in one week or less or we'll deduct 1% each day we're late.
- **UNRIVALED QUALITY** statistical process control with 4.5-sigma repeatability on most models, 5-year guarantee on all Ultra-Rel™ mixers.
- **UNMATCHED PRICES** often thirty to fifty percent lower than the competition.
- **HIGH-VOLUME CAPABILITY** worldwide manufacturing facilities to supply large-quantity production needs on short notice.
- **CONSISTENT NEW PRODUCT DEVELOPMENT** to meet our obligation to support your future designs.

* Performance curves and detailed data for Mini-Circuits products are contained in the RF/IF Designers Handbook. Write or call for your free, personal copies.

In Stock...Immediate Delivery

For custom versions of standard models consult our applications dept.

Using This Guide

Over 1000 Mini-Circuits IF/RF/Microwave Signal-Processing components are completely specified and described in this Guide. These Products are all available with guaranteed shipment of one week.

The large number of available models is offered so that the design engineer may select a model that closely fits the application requirement. In situations where there is a need for special electrical performance, mechanical configurations, environmental screening, or very low cost units, please contact our Applications Department. See page 39. In many cases, we produce special components in less than two weeks.

table of contents

The table of contents on page two lists product sub groups with corresponding specification pages and product group technical information including articles.

model number index

In each product group, model numbers are listed in alphanumeric order with page references to electrical specifications. All surface-mount models are highlighted with an indicator. See page 5.

SMD

Surface-mount devices are included in almost every product group. See model number index page 5. Product group specification sections indicate non-hermetic and tape and reel package availability. Technical articles are listed on pages 19 through 22.

tape and reel packaging

Designers applying automated assembly procedures for surface-mount components will find a listing for tape width, reel size, package number, and number of devices on a reel; "footprints" for the various packages are shown.

designer kits index

An assortment of models within a product group are listed and offered at discounted prices for breadboard and prototype designs. See page 37.

specifications

The specification pages in each section include, for every model, a photo, complete electrical specifications, price, page number for CAPD, schematic diagram, pin connections (for pc board models) or connector markings, and reference designations for the case style and outline drawing. Each model within a series has a case style and outline drawing reference. Comments applicable to the specifications are listed under Notes which appear for each page spread.

Using the latest industry criteria for specifying mixer and I and Q modulator performance, "typical" conversion loss has been deleted and replaced with $\overline{x}$ and σ (sigma) average value and standard deviation of values for conversion loss. A discussion of these new parameter listings is given. See page 17.

PARTNER PROGRAM℠

A revolutionary new concept that lets you lower the cost of doing business in the 90's. A true partnership is described where your savings keep growing year in and year out. Details of the program and the easy procedure to join are simply explained. See pages 11 through 13.

Mini-Circuits™ P.O. Box 350166, Brooklyn, New York 11235-0003 (718) 934-4500 Fax (718) 332-4661
Distribution Centers NORTH AMERICA 800-654-7949 417-335-5935 Fax 417-335-5945 EUROPE 44-252-835094 Fax 44-252-837010

Mini-Circuits

case style outline drawings

Case Style and Outline Drawings include information on case dimensions, tolerances, case material and finish, bracket options and "footprint" sketches for pc board design using surface-mount units. See page 25.

The information is arranged in tabular form with alphanumeric reference designations. Each alpha designation refers to a particular outline drawing. A photo of each case style is shown and designated on the model specification page.

computer-automated performance data (CAPD)

This symbol signifies that computer-automated performance date, CAPD,is available. A significant number of pages in our Handbook are devoted to Mini-Circuits' exclusive computer-automated performance data. These pages describe the most complete detailed data and performance curves ever available on characteristics of over 1000 catalogue products. Page numbers referencing this data appears on each product specifications page.

ULTRA-REL™ MIXERS
5-YR. GUARANTEE *

This symbol identifies products that are manufactured with extra reliability. See page 15 for a complete explanation.

prices

The prices shown are the U.S. unit list prices for the quantity indicated. For unit prices in higher quantities, and for a formal quote, contact our nearest distribution center, authorized local distributor, sales office or the factory. See back cover.

ordering information and warranty

For warranty, terms of payment, shipping instructions, and one-week guaranteed shipping conditions. See Pages 9 and 10.

technical assistance

For literature requests, assistance in selecting models, understanding model specifications, requesting additional model performance data, contact our Applications Engineering Department. See page 39.

sales assistance

For assistance in purchasing products, obtaining quotes, opening up an account, requesting order status information, assistance in obtaining same or next day delivery, contact our Sales Department.

NSN numbers

Specification pages contain a listing of Mini-Circuits' models that have been assigned a National Stock Number (NSN).

listing of reps, authorized distributors distribution centers

A complete list of Mini-Circuits' sales representatives, local distributors, and major Distribution Centers puts you in immediate contact with our Sales Support team to answer questions, assist in component selection, and expedite orders. See back cover.

Quality Excellence

Quality Excellence is the foundation for the total operation of our business and the keystone of our goal of customer satisfaction. It is, therefore, our policy to:

- Consistently provide products and services that will exceed the quality expectations of our customers.
- Actively pursue ever-improving quality through process improvement programs that will enable each member to do their job right the first time, and with a continuing level of quality improvement.

Quality will continue to be a major, strategic thrust in Mini-Circuits. It lies at the heart of everything we do.

Through active planning in every function in the company, we will strive to provide products and services that consistently meet all quality, schedule, and cost objectives. Furthermore, we will dedicate ourselves to continually improving the quality of our products and services by focusing on our processes and procedures.

Our ability to develop and administer a disciplined system for achieving continuous quality improvement is at the heart of accomplishing all strategic business objectives and indeed will determine how successful we are in securing our future.

That success will depend on releasing the power of each individual to contribute in a positive, productive working environment through enthusiastic and conscientious efforts for quality excellence and customer satisfaction in everything we do.

Every member is a part of our quality system:

- Each of us will strive to understand and satisfy the quality expectations of our customers (meaning the next internal organization in the process as well as the eventual end-customer).
- Each of us will strive to identify and eliminate the sources of error and waste in our processes and procedures.
- Each of us will aid the quality-planning and improvement efforts of others for the good of the corporation as a whole.
- Each of us will know what is expected individually and then surpass it.
- Each of us will take ownership of problems and resolve them.
- Each of us will voice opinions freely in efforts to overcome obstacles and increase creative contributions to our business.
- Each of us will track progress.

Each leader, manager, and officer is responsible for:

- Communicating our quality policy to each member.
- Clarifying specific responsibilities for quality.
- Developing and reviewing strategic quality plans and objectives on an on-going basis.
- Implementing a quality management system to carry out the plans and achieve objectives.
- Monitoring and continually improving the level of customer satisfaction.
- Monitoring and continually improving the defect and error rate of internal processes and systems.
- Developing joint quality plans with suppliers and other business partners.
- Implementing, funding, and reviewing specific quality improvement programs.
- Providing education and training in quality disciplines for all members.

ordering and delivery information

Refer to the rep listing in this handbook for Mini-Circuits worldwide network of sales representatives and distributors ready to serve your needs, supply your orders, and answer your questions promptly and courteously.

Federal supply code: 15542

how to order

Your local representative or distributor is the contact for both sales and service assistance for products listed in this catalog. These local offices have the latest price and delivery information on all models. They can also provide details on ordering procedures, service information and application engineering data. Your order may be sent directly to Mini-Circuits or to any of the local sales offices listed.

Prices listed in this catalog are domestic F.O.B. Brooklyn, New York. Mini-Circuits reserves the right to change specifications, models, prices, or designs without prior notice and without liability for such changes. Minimum order $50.00.

shipping instructions

Shipments can be made by either air or surface carriers. If specific shipping instructions do not accompany the order, Mini-Circuits will specify the carrier to be used. For air shipments, Mini-Circuits has arranged for substantial discounts with Federal Express.

terms

Net 30 days from date of invoice. If credit is not established with Mini-Circuits, shipments will be made C.O.D. (cash on delivery) or prepaid. We also accept most major credit cards. If prepaying, please include freight.

warranty

Scientific Components Corporation, Mini-Circuits division, warrants each product manufactured by Mini-Circuits to meet all published specifications and to be free from defects in material and workmanship. The Company's liability under this warranty is limited to repair, adjustment and/or replacement of defective parts returned, freight paid by Buyer, to the factory within a period of one year from date of shipment from the factory unless a shorter period is specified. International customers may ship to the Company's nearest Distributor.

Damage by misuse or abnormal conditions of operation, or evidence of partial or complete disassembly voids this warranty. SINCE MINI-CIRCUITS HAS NO CONTROL OVER CONDITIONS OF USE, NO WARRANTY IS MADE OR IMPLIED AS TO SUITABILITY FOR CUSTOMERS' INTENDED USE. BEYOND SUCH PERFORMANCE SPECIFICATIONS AS ARE MADE A PART OF THE PURCHASE ORDER.

Equipment shipped F.O.B. Mini-Circuits' plant or Distribution Center shall become the property of the Buyer upon delivery to carrier. Damage in shipment should be handled by the Buyer directly with the carrier by immediately requesting carrier's inspection upon evidence of damage in shipment. A fee will be charged to the Buyer to cover the costs of inspection and test of units returned under this warranty and subsequently found to meet specifications or to be faulty for reasons which are not Mini-Circuits' responsibility. This warranty excludes all other warranties expressed or implied. Mini-Circuits shall not be liable for any special indirect or consequential damages.

ALL MINI-CIRCUITS SHIPPED WITHIN

All Mini-Circuits' components listed in the latest published catalog, in all configurations and connector types, will be processed and shipped within one week after an order is received, or if the order calls for scheduled shipments, we will ship on or before the due date. If we're late, we'll deduct one percent per day from your bill (maximum deduction up to 25%, as allowed by law): but don't count on this discount since we intend to meet each and every scheduled shipment.

What makes this fast turnaround possible? First, fast manufacturing throughput achieved using powerful statistical process-control techniques coupled with the latest computer-automated production and test equipment. Second, a worldwide distribution network, with a major Distributor Center in the U.S. and in England, backed by 16 regional distributors.

We wholeheartedly encourage you to place your orders with your local distributor. But let's be realistic. Although our distributors stock our products, not every distributor will carry every single catalog item, especially in substantial quantities. In such instances, when the need for components is urgent, contact a Mini-Circuits' Distribution Center listed and you will be covered by our shipment guarantee.

Join Mini-Circuits

PARTNER PROGRAM℠

GUARANTEED SAVINGS...

A Revolutionary New Concept that lets you lower your cost of doing business in the 90's.

How the program works*...

The Partner Program℠ pricing concept is simple... the more you buy, the lower the price. Every time you make a purchase of a Mini-Circuits model, the price you pay corresponds to the total quantity of the present purchase plus the quantity of all your previous annual purchases of the same model going back to January 1, 1990 (see formula below). As the cumulative total enters into a higher quantity price break, the unit price of your present purchase is lowered, and it never stops. You can enjoy a lifetime of volume quantity price reductions on all of our catalog, and most of our custom products.

$Qty_A = Qty_B + Qty_C$

A = price calculation
B = base-cumulative annual
C = present purchase

*Subject to Partner Program℠ Terms and Conditions.

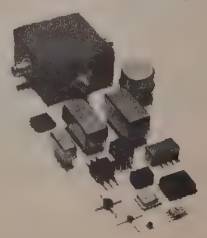
The Partner Program℠ makes sense

Today, everybody is talking about the highly competitive business environment and the global challenges of the 90's. In typical Mini-Circuits tradition, we're not talking... we're taking action.

The Partner Program℠ is our way of sharing risks and earning the rewards of doing business with you.

Mini-Circuits is committed to a total partnership for improving quality and reducing manufacturing thru-put time. The end result, lower costs. As Partners, we both share in these savings.

That's what true partnership is all about.



YEAR IN AND YEAR OUT!

Your savings keep growing...

When you start the Partner Program℠ the cumulative quantity purchased from Mini-Circuits before January 1, 1993, is the base quantity for computing prices. The base quantity increases each year as additional purchases are made. Savings occur as the base quantity throws your present purchase to a higher quantity price break.

For example, consider the purchase of 350 pieces of model GAR-1 in 1992, 1993, and 1994. In 1993, the unit price would be at the 700 piece level and in 1994 at the 1050 piece level. If in 1995, only 100 pieces are purchased, the unit price would be at the 1150 quantity level and your savings would continue.

Joining the Partner Program℠

The program is limited to qualified customers at no cost or obligation. Simply request a Partner Program℠ kit to receive details, terms and conditions, and registration form.

We'll take care of all the details and manage the statistics for your account.

You can place your orders in the usual manner with Mini-Circuits or any Mini-Circuits Distribution Center, or authorized participating distributor. Your purchases will be tallied and tracked in the Mini-Circuits computer. In 1993, you will be eligible to receive automatic discounts based on your purchases in 1992.

ACT NOW!

We're ready to start building this far-reaching program of long term partnership ***now.***

Join the ***Partner Program℠ TODAY!***

Mini-Circuits

PARTNER PROGRAM℠

TERMS & CONDITIONS

This program is offered to qualified customers for the purpose of maintaining a mutually beneficial long term relationship.

As a participant of this program, you will share in the results of Mini-Circuits' commitment to quality by earning cumulative annual quantity price break reductions on all of your Mini-Circuits purchases.[1]

As the cumulative total enters into a higher quantity price break, the unit price of your present purchase is lowered, and it never stops. You can enjoy a lifetime of volume quantity price reductions on all of our catalog, and most of our custom products.

For a particular purchase of quantity C in the present year, the price shall correspond to quantity A according to the following formula.

QTY A = QTY B + QTY C

where QTY B = cumulative annual quantity purchased in preceding years as of January 1, 1990.

joining the program

Qualified customers automatically join the Partner Program by making a purchase of a Mini-Circuits model[2] from a Mini-Circuits distribution center, authorized local distributor, or from the factory direct.

qualified customers

The program is limited to original users. Companies reselling Mini-Circuits products do not qualify. Original users shall mean approved companies, universities, schools, organizations, a division or subsidiary of a corporation, and a department or location of a government agency. For corporations issuing a corporate contract to Mini-Circuits, a division of the corporation may combine quantities purchased by other divisions for cumulative total quantity calculations. In absence of a corporate contract, each division must join the Partner Program℠ individually.

maintaining qualification

A good credit standing with Mini-Circuits is a criteria to remain a participant of the program.

purchase location eligibility

Purchases from Mini-Circuits or a Mini-Circuits distribution center qualify for the program. Purchases from an authorized participating distributor qualify for the program when documentation of purchase is supplied to Mini-Circuits.

product eligibility

All catalog models and most special models are included in the program.

product ineligibility

Purchases made for the following do not qualify for the program: special testing, lot testing, serializing, source inspections, and qualification testing. Furthermore, purchases during special promotions or for multi-year or special contracts do not qualify. Highly specialized custom designed models may not be included in the program. Please consult with the Partner Program manager.

purchase quantities

Quantities credited to the program include only the net quantity of each model shipped to the customer in a specific calendar year. Different models may not be combined.

minimum purchase quantities

The base year quantity equals the total cumulative consecutive annual quantity purchased in preceding years as of January 1, 1990. However, if the quantity purchased for a model in a year is less than 2% of the quantity purchased in the previous year, then the cumulative total for the previous years shall revert to zero, i.e., base year quantity equals zero.

partner program changes

Mini-Circuits reserves the right to make changes to the program without prior notice.

partner program validity

The partner program is void where prohibited by law.

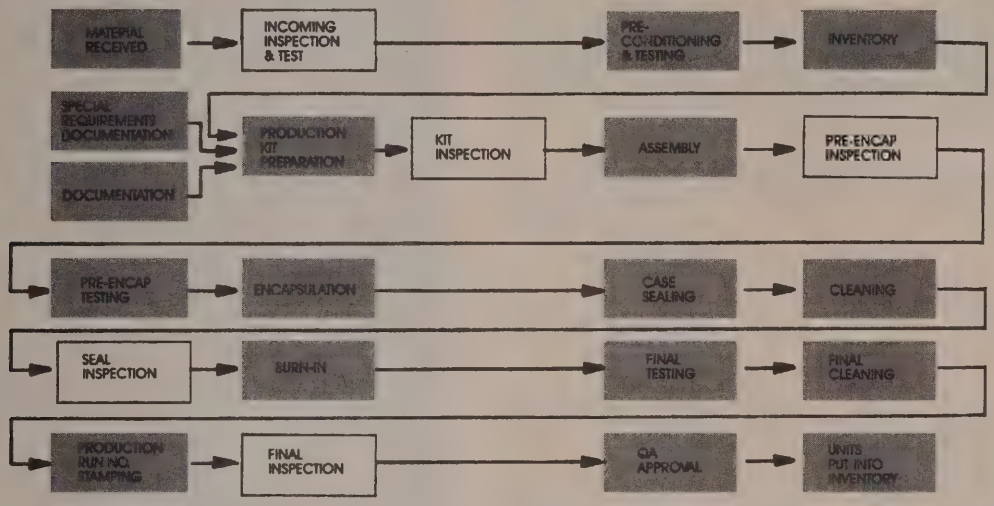
[1]Subject to the provisions of the terms and conditions given herein.
[2]All catalogs and most special products are eligible.

Mini-Circuits™ P.O. Box 350166, Brooklyn, New York 11235-0003 (718) 934-4500 Fax (718) 332-4661
Distribution Centers NORTH AMERICA 800-654-7949 417-335-5935 Fax 417-335-5945 EUROPE 44-252-835094 Fax 44-252-837010

Mini-Circuits Guarantees Quality

Although we have gone beyond our past objective of exceeding 0.1% AQL- no rejects, not even one per 1000 units - this is not satisfactory anymore. Our present commitments are to achieve a Cpk of 1.5, or 4.5 sigma: not even 4 rejects per million units. Mini-Circuits' process controls using SPC, pre-control and design of experiments reduce variability of performance. "Skinny Sigma" is our way of life and it can be yours. Specify Mini-Circuits RF signal processing components to reduce your inspection costs and improve your production yields.

How Mini-Circuits achieves high reliability



Environmental Specifications

All MCL products are manufactured under exacting quality assurance and control standards. As a minimum they will meet published specifications after being subjected to any or all of the following physical and environmental tests of MIL-STD-202, unless otherwise noted. For amplifiers, see the table of environmental specifications at the beginning of the amplifier section of the Handbook.

Rating or Test	MIL-STD-202		Package Type			
	Method	Condition	Hermetic	Nonhermetic		
				Metal	Plastic	Connectored
Temperature Operating, °C (1)	—	—	-55 to 100	-55 to 100	-20 to 85	-55 to 100
Temperature Storage, °C (1)	—	—	-55 to 100	-55 to 100	-55 to 100	-55 to 100
Altitude: 150,000 feet	105	E	Yes	Yes	Yes	Yes
Humidity: 90% RH, 65°C	106	—	Yes	Yes (2)	(3)	Yes (2)
Thermal Shock: -65 to 125°C	107	B	Yes	Yes	-55 to 100	-55 to 100
Fine Leak, atm-cc/s	112	C	1×10^{-7}	Not Appl.	Not Appl.	Not Appl.
Gross Leak, atm-cc/s	112	D	1×10^{-5}	Not Appl.	Not Appl.	Not Appl.
Drop: random, 45 minutes	203	—	Yes	Yes	Yes	Yes
Vibration: 2 to 2000Hz, 20 G's, 12 hours	204	D	Yes	Yes	Yes	Yes
Solderability: 95% coverage	208	—	Yes	Yes	Yes	Not Appl.
Solder heat: 260°C 10 seconds (4)	210	B	Yes	Yes	Yes	Not Appl.
Terminal tensile strength: 4-1/2 lbs, 10 seconds (5)	211	A	Yes	Yes	Yes	Not Appl.
Terminal fatigue: 2 lbs 3 cycles (5)	211	C	Yes	Yes	Yes	Not Appl.
Mechanical shock: 100 G's, 6ms	213	I	Yes	Yes	Yes	Yes
Solvent resistance	215	—	Yes	Yes	Yes	Yes

Notes:
1. Extended temperature ranges are available for some models; consult factory.
2. Nonhermetic metal-cased units may require bake-out after test to restore full performance.
3. Humidity capabilities of plastic-cased units available on special request.
4. For surface-mount models, peak temperature during reflow: 230°C or more, depending upon mode.
5. Not applicable to surface-mount models

In Stock...Immediate Delivery

For custom versions of standard models consult our applications dept.

Product Testing For High Reliability

Ultra-Rel

Mini-Circuit's mixers, phase detectors, frequency doublers and limiters are "Ultra-Rel": They carry a five-year guarantee, a reliability breakthrough attributed mainly to unique Ultra-Rel diodes that easily meet and exceed MIL-STD-883 tests. Each type of diode must pass the following grueling tests:

LIFE	1000 hrs. T_A + 125°C 50 mA ac
THERMAL SHOCK	-65° to +125°C, 200 cycles, 5 min. dwell
MECHANICAL SHOCK	1.5k G's, 0.5 usec pulse
VIBRATION	variable frequency 20 to 2,000 Hz.
TEMPERATURE CYCLE	-65°C to +125°C, 200 cycles, 10 min. dwell
AUTOCLAVE (pressure pot)	14.7 psi, T_A + 121°C, 96 hr.
85/85	85°C/@85% humidity 168 hr., no bias
ACCELERATED HI-TEMPERATURE STORAGE	300°C, 325°C, 350°C storage until 50% failures

HTRB Testing

Certain models, identified individually in the catalog, instead have their diodes subjected to high-temperature, reverse-bias (HTRB) testing. This is an accelerated-life screening test generally reserved for space applications. Here the Schottky and PIN diodes are subjected to a one-volt negative bias at 150°C for 168 hours. The objective of this accelerated aging stress is to force time/temperature-related failures and thus screen out potentially unreliable devices.

/MIL, TX, and Hi-Rel Products

All hermetically sealed MCL models can be subjected to screening and to environmental testing. These tests are designed to eliminate early failures and to ensure performance in hostile environments. Many models having such testing performed are available from stock parts, designated by a /MIL, TX or Hi-Rel suffix to the model number. For your convenience, the table below summarizes availability and applicable MIL Spec by product line. A brief description of the test procedures follows the table.

Of course, if you have a specific screening requirement for any model, which is not available from a stock item, or for a non-hermatic model, contact our Applications Engineering staff and they will suggest the most cost-effective means of satisfying your reliability needs.

/MIL Models

Mixers, Frequency Doublers and Phase Detectors are tested in accordance with MIL-M-28837. Pre-conditioning, Group A (screened) and Group B are performed on each inspection lot.

Power Splitters are tested in accordance with MIL-P-23971. Group A and Group B are performed on each inspection lot.

These models may be ordered by adding the suffix /MIL to the model number.

Product Line	Applicable Suffix *TX	*Hi-Rel	*/MIL	Applicable Std or Specification for reference
Amplifiers	Not applicable	No	No	MIL-STD-883

Mini-Circuits

TX Models

TX Models employ hermetically sealed diodes which have passed the following tests in accordance with MIL-STD-750:

1) HIGH TEMP. STORAGE	Method 1032
2) TEMP. CYCLING	Method 1051, Cond. C
3) CONSTANT ACCELERATION	Method 2006 (Y1 Orientation, 20,000 G's
4) FINE AND GROSS LEAK	Method 1071, Cond. C and H
5) BURN-IN	Method 1038, Cond. B

The end product is then further screened by being subjected to:

1) THERMAL SHOCK	MIL-STD-202, Method 107, Cond. A (100°C)
2) BURN-IN	96 hours at 100°C with 8mA at 1kHz
3) FINE AND GROSS LEAK	MIL-STD-202, Method 112, Cond. C and D

These models may be ordered by adding the suffix TX to the model number. Also, some models in the product lines having a "No" entry in the TX column of the table may be available with similar screening on special order.

Hi-Rel Models

Mixers, Phase Detectors, Frequency Doublers and Electronic Attenuators/Switches are tested to the following per MIL-STD-202:

1) THERMAL SHOCK	Method 107, Cond. A (100°C)
2) BURN-IN	Method 108, Cond. A (100°C, 8mA ac)
3) FINE AND GROSS LEAK	Method 112, Cond. C and D

Power splitter/combiners, Directional Couplers, Transformers, Fixed Attenuators, Filters and Limiters are tested to the following per MIL-STD-202:

1) BAKE-IN	Method 108, Cond. A (100°C, no excitation)
2) THERMAL SHOCK	Method 102, Cond. A (100°C)
3) FINE & GROSS LEAK	Method 112, Cond. C and D

Switches incorporating PIN diodes are tested to the following per MIL-STD-202, as a minimum:

1) THERMAL SHOCK	Method 107, Cond. A (100°C)
2) BURN-IN	Method 108, Cond. A (100°C, diode current applied)

For additional tests applicable to specific switch models, please consult our Sales Department.

These models may be ordered by adding the suffix Hi-Rel to the model number.

Meeting Customer Needs

The following table outlines generic types of tests we do to satisfy customer's needs per specific contractual requirements. Each entry encompasses one or more QCPs (Quality Control Procedures) which are particularized as to test conditions. The principal MIL standards referenced in the QCPs are listed.

QCP GROUP	TEST	METHODS OF MIL-STD -202	-810	-883
02-00	THERMAL SHOCK	107	503	1010
03-00	RANDOM VIBRATION	214		
04-00	MECHANICAL SHOCK	207,213	516	
05-00	CONSTANT ACCELERATION	212		2001
06-00	BAKE-IN/BURN-IN	108		1015
07-00	SEAL TESTS	112		
08-00	MOISTURE RESISTANCE	106	507

Statistical Process Control - Key to Competitive Manufacturing

In today's tough world market environment, the need to be better is more demanding, and the need to be more competitive is a necessity to survive. A company cannot rest on the success of past performance and expect to continue to remain successful. There are many well known examples of companies both large and small that were once leaders in their field and now are skeletons of themselves or just plain dead and buried.

How does one get more competitive? The answer is simple. Exceed your customers' needs and expectations ...provide, in the manner required by the customer, a quality product, at low cost, on time, every time. In most manufacturing organizations a significant cost factor is attributed to the cost of purchased materials and they may range from 25% to 80% of the cost of the entire product. Because of the significance of purchased material to total cost, the quality of the purchased material is important and essential to the competitiveness of the manufacturing organization.

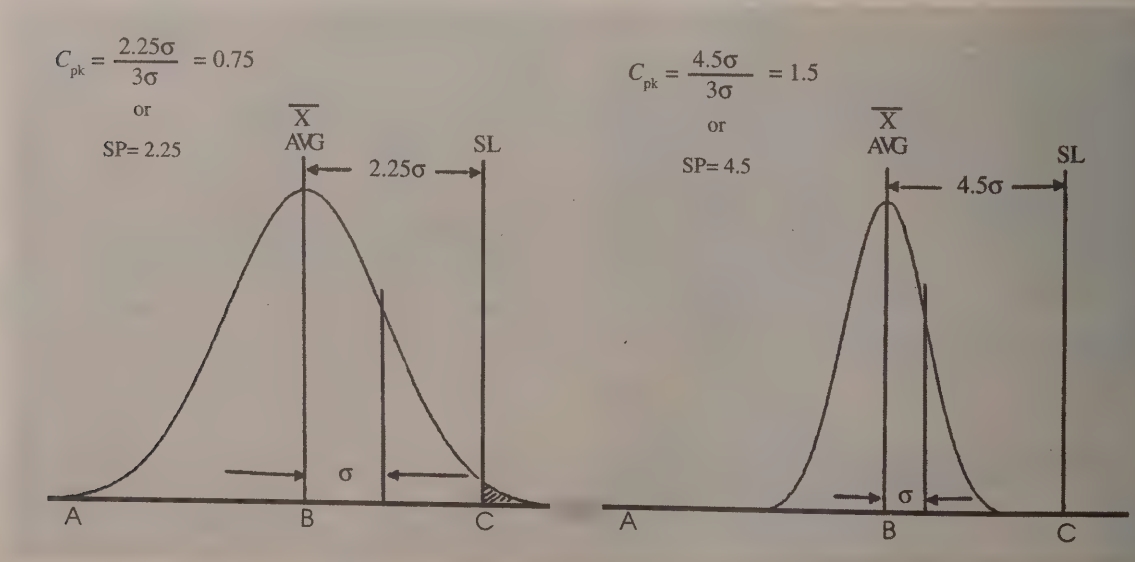
This paper will discuss the effects of quality on the direct and indirect causes that contribute to the real cost of the purchased material. A measure of the quality of the material will be described by a quality factor, Cpk. The higher the value of Cpk, the better the quality of the product. Cpk is a measure of the repeatability of material performance. The higher the number, the better is the consistency of performance or the less is the variation in performance. Therefore, once designed in, the material should be consistent enough so that its variations are not transparent to the final product.

In manufacturing, variation is evil! If the value of Cpk for a purchased part is low, and Cpk varies from production lot-to-lot, then it can be projected the process for manufacturing the part is not in control, performance will be inconsistent, rejects can be expected, and the true cost of the purchased part will be significantly higher than the price shown on the purchase order.

With the abundance of low cost computers and hand held scientific calculators, the ability to calculate Cpk is easily attainable. Cpk is a quality factor that is based on the statistical calculation of mean value, $\bar{x}$ and standard deviation, sigma. Cpk is the difference in value between the mean value and the closest spec limit divided by 3 sigma.

$$Cpk = \frac{(\text{spec limit - mean value})}{3 \text{ sigma}}$$

At Mini-Circuits we use SP (Sigma Performance) = 3 times Cpk. We must measure variation to control it. If we can measure it we can tell when it gets better or worse. We need to know what works and what doesn't work. How much a manufacturing process varies is measured by Sigma (σ). In the figures below, the average (AVG) tells us where the process is centered. The spread or width is measured by sigma. The figures below show how the product is distributed. The height of the graph measures how often values occur. The spread measures how far the values are from the



Mini-Circuits™

Mini-Circuits

AVG. If the product is well controlled, there will be little variation, more values of units will occur nearer the target, $\bar{x}$, and sigma will be small.

Manufactured products are either good or bad depending on whether they do what the customer wants them to do. Specification limits were the measure of success, where product within spec was good and out of spec bad. It is not enough in today's market place to just meet spec! In the figures below, a spec limit (SL) is compared to the product distribution. Product built outside, or to the right of the spec limit, is very bad; even product built just to the left of the spec limit is not good. Small (skinny) Sigma means the product will be far from the spec limit and close to the AVG value (very good product, what today's customers demand).

We can compare different processes by measuring variation and the distance from the average to the spec limit. But only if we measure the distance in terms of sigma, as shown in the figures. The real distance is the same for both figures (C-B), meaning both processes are centered and the AVG values are equal. But, in terms of product quality, the figure on the right is far superior ($4.5 > 2.25$) because the variation between units is much less as given by the skinnier value of sigma.

For convenience, we normalize by dividing the distance (C-B) by sigma (considered a relative ideal), and get the capability index, Cpk, a figure of merit. The skinnier the σ is, the higher the Cpk, and the less variation, unit-to-unit.

The "goodness" of the purchased parts, Cpk, will affect the actual real cost of the purchased material. This real cost can vary and will depend on the original design and the specifications describing the purchased material. The real cost depends on the sum of both direct and indirect costs. These are:

Costs additive to the cost of purchased parts:

A. Direct costs of poor quality parts:

1. Warranty
2. Scrap and repair
3. Inspection/test

B. Indirect costs of poor quality parts:

1. Lost sales - customers switching to competition
2. Field trips, retrofits, settlements
3. Downtime, line shut downs, delinquencies, rescheduling
4. Inventory build-up, obsolete material, MRB, material expediting, material shrinkage
5. Engineering changes and redesign, documentation changes, material selection and separation.

C. Indirect costs, demands of the manufacturing system on company's resources

1. Space
2. Manpower, receiving, production control, manufacturing, sales, finance, engineering, QA, accounting, maintenance, house cleaning.
3. Utilities (lighting, heating, air conditioning, telephone)
4. Capital equipment (testing, incoming inspection and production, data processing)
5. Finances, cost to maintain higher inventory of all material
6. Data processing and data entry

Description of costs to the manufacturer of poor quality parts received.

When poor quality parts are received, the manufacturer must maintain an incoming inspection department to check parts for conformance to specifications. If all parts were received with a Sigma Performance = 4.5 or, Cpk = 1.5, then the demands for incoming inspection would evaporate. However, this is not the case in the real world today. Therefore, the cost of the inspection department is visually spread out and amortized as a percentage of the total cost of all material received. However, when poor quality parts are received, there are direct additional costs that are incurred by the manufacturing organization. These costs include additional testing and inspection so that additional manpower and capital equipment are required. In addition, there are added costs associated with documents DMR, RTV etc.; MRB meetings; purchasing costs, such as expediting, search for alternatives, rescheduling and issuing of p.o. change orders; and engineering costs for evaluation and test.

In addition to incoming inspection costs, the delays of incoming material to the production floor will generate additional manufacturing costs. These include rescheduling and smaller production runs (less parts available); inefficiency of resources, such as manpower and machines, increased space requirements and WIP; increased material shrinkage, and increased manufacturing throughput time.

The results of these manufacturing delays and costs will cause shipment delays and increased manufacturing costs that may be passed on to customers. Both factors contributing to a less competitive position!

To pursue Mini-Circuits' goal to exceed our customer's expectations, Mini-Circuits is striving to achieve an SP of 4.5 or, Cpk = 1.5. All mixer and I & Q modulator conversion loss is specified in statistical terms. We are vigorously pursuing statistical process control and statistical specifications on all our products to enable our customers to receive the highest quality and value, at the lowest cost ... the key to competitive manufacturing.

Mini-Circuits

The photos included illustrate some of these components soldered to circuit boards.

What automated soldering methods can be considered for Mini-Circuits' surface-mount components? There are two basic methods: reflow and wave soldering. Generally, reflow soldering can be done when (1) there are only surface-mount components, or (2) these are present together with through-hole components and the latter will be soldered in a separate (wave-soldering) step. The surface-mount components can be located on both the upper and lower sides of the board, when reflow is used. Wave soldering is suitable for through-hole components mounted on top of the board as well as for surface-mount components on the bottom of the board. Both ceramic and polymer-based boards can be accommodated.

Reflow

Reflow requires applying a controlled amount of solder and flux to the areas where connections are to be made. A common technique is to print a pattern of solder paste on the board, and then put the components onto their places. They tend to stay in position because of the stickiness of the paste. Optionally, components can be held with chip-bonding epoxy. When heat is applied, it must produce a time-temperature profile suitable for accomplishing several process steps as illustrated in Figure 1.

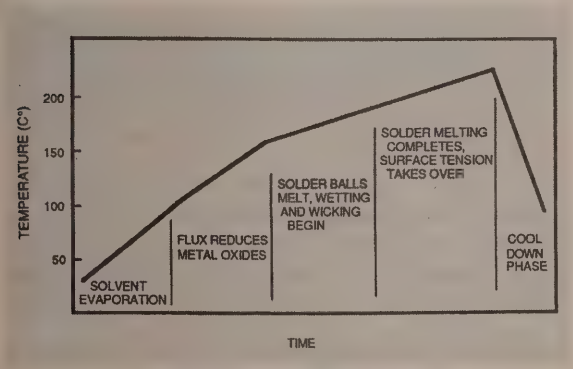

Fig. 1 Solder Reflow Phases

First, solvent evaporation is done at temperatures up to about 100°C. Second, flux reduces metal oxides as temperature rise to the solder melting point, typically 183°C. Third, as temperature continues to rise, the solder particles in the paste melt and wetting and wicking in the joint area begin. In the next step when temperature reaches a peak around 215°, surface tension shapes the fillet of fully molten solder. It takes only a few seconds for proper solder wetting at that temperature. The length of time that the work is actually above 200 is usually limited to one or two minutes to avoid damage. Many plastic-encapsulated components can withstand several minutes of solder-melt temperature when reflowed. Even at the higher temperature experienced in wave soldering (see below), such components tend to withstand several seconds immersion in molten solder.

There are several techniques for applying the heat needed for reflow. Two of the most common are infrared and vapor-phase. Infrared heat sources operate at very high temperature and are placed at the inner walls of the chamber, not in contact with the work. The actual temperature of the work is strongly affected by its mass, geometry and composition, as well as belt speed. Organic materials such as epoxy-based boards tend to absorb the IR radiation and conduct the heat to metal parts which, by themselves, would tend to reflect the IR away. On the other hand, in the vapor-phase soldering process the vapor surrounding the work is maintained at the optimum solder-wetting temperature. This is accomplished by boiling an inert liquid in a tank. The boiling point is approximately 215°C. When the work is held in the vapor just above the liquid, the heat at that temperature is transferred to all surfaces quite uniformly.

Figures 2 and 3 illustrate profiles obtained with both relow processes. Separately controlled heating zones in an IR oven provide an opportunity to shape the profile more optimally than is typical of the vapor phase process. However, the infrared method may require more careful setup to avoid undesired nonumiformity of heating.

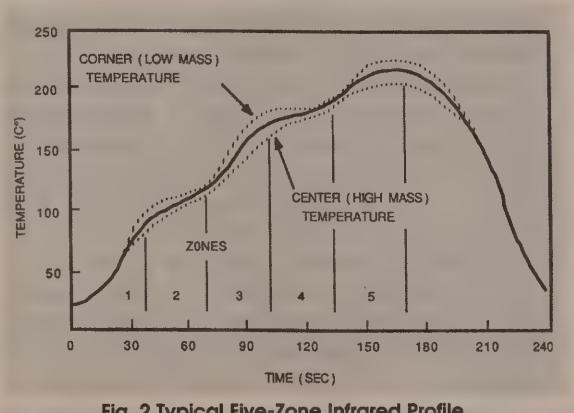

Fig. 2 Typical Five-Zone Infrared Profile.

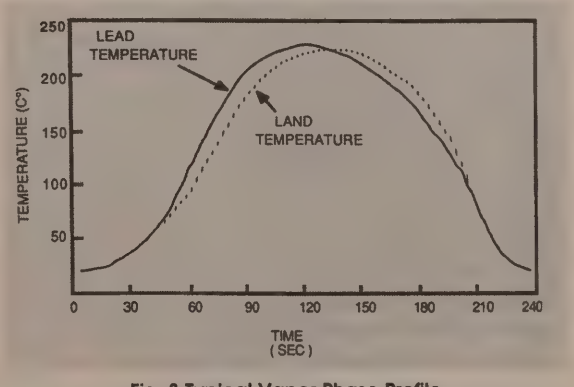

Fig. 3 Typical Vapor Phase Profile

For custom versions of standard models consult our applications dept.

Wave Soldering

This method applied molten solder to the bottom side of a circuit board after a preheating sequence, with cool-down following the soldering. There are variations to the method, mainly characterized by the shape of the solder wave; the choice among them is influenced by the type of assembly and the components being mounted. Solder temperature, typically 260°C, is higher than the peak temperatures used in the reflow method. The temperature profile experienced by the board and components increases during preheat to about 150° at at rate similar to reflow, but then rises rapidly when the solder wave impinges.

Components housed in molded plastic cases may be better suited to reflow soldering, because of the possibility of micro-cracks developing at the leads if they are wave soldered. Resistance to this defect is enhanced when moisture is baked out of the plastic material before soldering by either method; 24 hours at 125°C is usually effective.

Some Pointers

Among the considerations for successful attachment of surface-mount components are:

- Lead coplanarity, and wettability by the solder.
- Compatibility of solder composition with finish on components and circuit board.
- Amount of solder deposited.
- Internal heating of components.
- Component placement and orientation accuracy.

Leads on a component should all be in the same plane. More departure from coplanarity can be tolerated in the reflow method than in wave soldering, because in reflow the surface tension in the molten solder tends to bridge small gaps and ensure an acceptable fillet. In wave soldering, special techniques are used to counteract the tendency of surface tension to deposit excess solder and cause undesired bridging between metallization areas. Even so, better coplanarity may be requuired when wave soldering to ensure good joints.

Wetting, or the ability of solder to adhere to the entire joint surfaces uniformly, is enhanced when clean surfaces on the component leads and circuit board are provided. If the quality of initially suitable surface finishes is preserved by proper handling and storage, the flux applied in the soldering operation should suffice to remove any metallic oxides. Compatibility of the solder includes closeness of its melting point with that of the metallization finishes, and the minimization of materials such as gold which promote the formation of brittle intermetallic compounds with tin-lead solder. The amount of solder to be deposited depends upon joint geometry, but once determined the deposition can be controlled to a few thousandths of an inch by using preforms or printing the solder pattern.

Concern about internal heating of components during soldering becomes greater when the size or complexity of individual components increases, or where an assembly contains a mix of large and small components. In the latter case the heating rates can be disparate, or a large component may mask a small one from the source of heat. Careful study and experimentation may be needed to optimize the process. Measurement of air temperature in the processing chamber, even at several points, may not be sufficient with infrared heating. Monitoring with a surface temperature profiler can ensure that small components are not being overheated.

While high accuracy is needed for component placement on a circuit board, this requirement is eased somewhat in the case of reflow, because surface tension in the molten solder has a self-centering action. This assumes that a proper metallized footprint has been provided. Correct orientation of components requires assurance that when they are supplied in tape-and-reel, all have been inserted into the tape in a constant and known orientation. Also, the tape cavity dimensions must ensure that the orientation is maintained. Especially when component placement is done manually, a clear orientation index is necessary on each component. The following considerations tend to keep the components, once placed, from becoming dislodged before the solder solidifies: When all surface-mount components are on top of the board, the stickiness of solder paste and then the surface tension of molten solder usually suffice. Components on the bottom of the board may need pre-attachement with an adhesive such as epoxy. Caution is then necessary to prevent low-viscosity constituents of the adhesive from spreading onto the metallization areas ("creep"), which could inhibit solder wetting.

Automated Soldering of Mini-Circuits Surface -Mount Components

Of course, the surface-mount models listed at the beginning of the article can also be mounted by hand-soldering techniques. But, pertinent to the advantage afforded by automated assembly is that most can be soldered in their standard configuations, or require simple modification to

their internal connection method or omission of a plastic enclosure, depending upon the particular temperature profile specified for a customer's application.

Examples of Soldering Temperature Profiles for Mini-Circuits Components

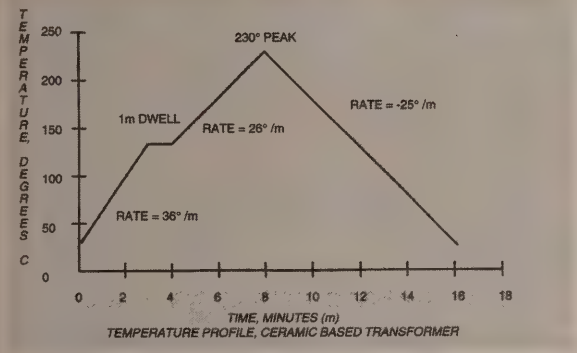

Fig. 6 Temperature Profile, Ceramic-Base Transformer

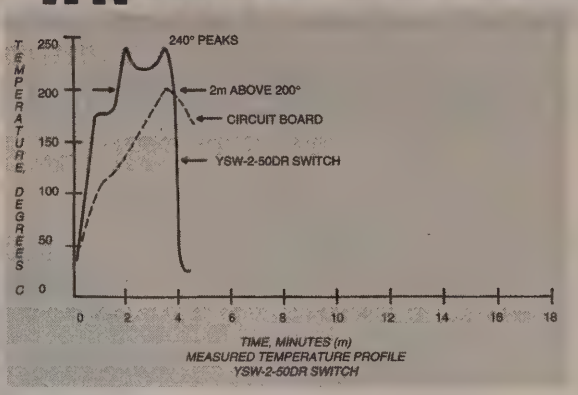

Fig. 7 Temperature Profile, YSW-2-50DR Switch

Mixer model RMS-2 meets the temperature profile shown in Figure 4 in its standard configuration. Transformer model T4-1 meets the profile in Figure 5 when a solder having 260°C solidus is used for its internal connections. A special transormer model designated TC, having a smaller version of case style TT100, has a ceramic base and no lid. It accepts the temperature profile shown in Figure 6. All three of these profiles were set by customer's specifications. As a final example, GaAs switches with drivers, in plastic case style KKK155 are designed to withstand a reflow heating and cooling cycle lasting 4 minutes, in which the component itself exceeds 200°C for 2 minutes. Figure 7 shows actual temperatures measured on a switch and on the circuit board to which it is being mounted, using an infrared reflow machine having four zones and seven source panels in a 72-inch overall length. The same GaAs switches in metal-ceramic case style AG191 will withstand a peak case temperature up to 275°C.

tape and reel packaging for surface mount devices

Design-For-Assembly (DFA) and Design-For-Manufacture (DFM) stand tall alongside CAD/CAM in the quest to optimize profitability, production efficiency and equipment operating usage.

Automation of surface-mount assembly by the use of pick-and-place equipment to handle tiny components has been enhanced by evolutionary improvements in tape-and-reel systems which can accommodate as many as 4000 parts on a 13-inch reel. This results in less frequent component reloading and less downtime of the assembly equipment. Other advantages of tape feeders include versatility or the ability to handle a variety of parts.

Mini-Circuits has kept pace with the trend towards automated assembly and offers RF/Microwave signal-processing components (mixers, amplifiers, transformers, power splitters and switches) in tape-and-reel format as shown below.

To order a tape-and-reel packaged product, add suffix -TR to its model number.

tolerance .x±.1 .xx±.03 .xxx±.015 inch **oz. = grams x.0353**

* NOTES:

A. MATERIAL AND FINISH
- A1. Header material: C.R.S. Pin material: #52 alloy. Finish: electro tin, hot-oil flowed. Cover material: cupro-nickel.
- A6. Case material: aluminum alloy. Finish: blue paint over irridite.
- A10. Case material: aluminum alloy. Finish: grey paint.
- A11. Case material: aluminum alloy. Finish: blue anodized.
- A18. Mounting bracket finish: irridite or clear anodize.

B. MOUNTING
- B1. Mounting bracket available on request. Add suffix B to part number.
- B2. Mounting bracket available on request. For bracket mounted on connector end add suffix B to part number and $5.00 to unit cost. For bracket mounted on the rear, add suffix BR to part number and add $1.50 to unit cost
- B3. Insulated spacer available. Request P/N B14-045-01.
- B4. Insulated spacer available. Request P/N B-14-047-01.
- B6. Bracket version only.
- B7. Pin's meniscus (of header): 0.015" max.

C. MARKING
- C1. For port markings 1, 2, and 3 see specification data sheet.

D. CONNECTORS
- D1. Connectors: SMA Standard. BNC on request (no charge). Male SMA on request, consult factory.
- D2. Connectors: please specify, unless otherwise noted; BNC is standard, TNC, SMA and Type N, consult factory. (ZAPD -4 units not available with BNC).
- D3. For Bracket Version, Option B, this dimension, "C"", changes from 0.75 to 0.94 inches.
- D4. FTB Models available:
  - *A15 female BNC/isolated female BNC.
  - *C15 male BNC/isolated female BNC.

  FT Models available:
  - *A16 female BNC/female BNC 75 ohms.
  - *B16 female BNC/male BNC 75 ohms.
  - *C16 male BNC/female BNC 75 ohms.
- D5. Connectors: BNC standard, TNC consult factory.
- D6. Connectors: Female SMA only. Male SMA available on request, consult factory.
- D7. For ZFSC-5 a fifth connector is offered as Port 5 in-line and opposite of sum(s) port.

E. SPECIAL TOLERANCES
- E1. Pin diameter ±.005 inch.

* NOTES:

A. MATERIAL AND FINISH
- A1. Header material: C. R. S. Pin material: #52 alloy. Finish: electro tin, hot oil flowed. Cover material: cupro-nickel.
- A2. Case material: C. R. S. Pin material: #52 alloy. Cover material: stainless steel. Finish: gold flash per MIL-G-45204.
- A3. Case material: epoxy. Pin material: iron-nickel alloy. Finish: bright tin-plate per MIL-T-10727
- A4. Case material: aluminum alloy. Finish: irridite per MIL-C-5541.
- A5. Case material: C. R. S. Finish: grey paint over hot-tin dip.
- A6. Case material: aluminum alloy. Finish: blue paint over irridite
- A7. Case material: aluminum alloy. Finish: case black paint. Heat sink: black anodize. Baseplate iridite per MIL-C-5541.
- A8. Case material: aluminum alloy. Finish: case irridite. Heat sink: black anodize.
- A10. Case material: aluminum alloy. Finish: grey paint.
- A11. Case material: aluminum alloy. Finish: blue anodized.
- A18. Mounting bracket finish: irridite or clear anodize.

B. MOUNTING
- B1. Mounting bracket available on request. Add suffix B to part number.
- B2. Mounting bracket available on request. For bracket mounted on connector end add suffix B to part number and $5.00 to unit cost. For bracket mounted on the rear, add suffix BR to part number and add $1.50 to unit cost.

C. MARKING
- C1. For port markings 1, 2, and 3 see specification data sheet.
- C2. Consecutive marking, n = no. of way power-splitter.

D. CONNECTORS
- D6. Connectors: Female SMA only. Male SMA available on request, consult factory.
- D7. Connectors: BNC only.
- D9. Connectors: BNC standard. TNC or Female SMA on request, consult factory.
- D11. Connectors: Please specify; Type N or SMA.
- D16. Connectors: Please specify, unless otherwise noted SMA is standard for model ZHL-2-12 for all other models BNC is standard. TNC, N, or SMA available on request. consult factory.
- D17. Connectors: Female SMA only.
- D22. Gain Control Terminal on Models ZFL-1000G and ZFL-1000GH only.

E. SPECIAL TOLERANCES
- E1. Pin diameter ±.005 inch.
- E2. Lead width ±.010; lead thickness ±.005 inch.

* NOTES:

A. MATERIAL AND FINISH
- A3. Case material: epoxy. Pin material: iron-nickel alloy. Finish: bright tin-plate per MIL-T-10727.
- A5. Case material: C.R.S. Finish: grey paint over hot-tin dip.
- A6. Case material: aluminum alloy. Finish: blue paint over iridite.
- A7. Case material: aluminum alloy. Finish: case black paint. Heat sink: black anodize. Baseplate iridite per MIL-C-5541.
- A8. Case material: aluminum alloy. Finish: case iridite. Heat sink: black anodize.
- A9. Case material: brass. Finish: nickel plate.
- A10. Case material: aluminum alloy. Finish: grey paint.
- A11. Case material: aluminum alloy. Finish: blue anodized.
- A12. Header finish: gold plate per MIL-G-45204. Case material: cupro-nickel
- A18. Mounting bracket finish: iridite or clear anodize.

C. MARKING
- C3. For Pin designations see specification data sheet.

D. CONNECTORS
- D6. Connectors: Female SMA only. Male SMA available on request, consult factory.
- D9. Connectors: BNC standard. TNC or Female SMA on request, consult factory.
- D10. Connectors: BNC standard. SMA on request, consult factory.
- D11. Connectors: Please specify; Type N or SMA.
- D12. Connectors: Male BNC, Female BNC standard. Other combinations with SMA available on request, consult factory.
- D13. Connectors: Male SMA. Female SMA only.
- D14. Connectors: Male N, Female N standard. Combinations with BNC, SMA, TNC available on request, consult factory.
- D15. Connectors: Male TNC. Female TNC only.
- D17. Connectors. Female SMA only.
- D18. Connectors: Male BNC only.
- D19. Connectors: Male SMA only.
- D20. Connectors: Male Type N only.
- D21. Connectors: Male TNC only.

E. SPECIAL TOLERANCES
- E2. Lead width ±.010; lead thickness ±.005 inch.

F. PACKAGING
- F1-17. Tape and reel packaging available. See Tape and Reel Packaging information for details.

* NOTES:

A. MATERIAL AND FINISH
- A1. Header material: C.R.S. Pin material: #52 alloy. Finish: electro tin, hot oil flowed. Cover material: cupro-nickel.
- A4. Case material: aluminum alloy. Finish: irridite per MIL-C-5541.
- A6. Case material: aluminum alloy. Finish: blue paint over irridite.
- A8. Case material: aluminum alloy. Finish: case irridite Heat sink, black anodize.
- A10. Case material: aluminum alloy. Finish: grey paint.
- A11. Case material: aluminum alloy. Finish: blue anodized.
- A13. Case material: plastic. Lead finish: Tin plate.
- A14. Case material: ceramic or plastic, ceramic base. Terminations: palladium platinum silver.
- A15. Case material: kovar. Lead material: kovar. Finish: gold plate per MIL-G-45204 .
- A18. Mounting bracket finish: irridite or clear anodize.
- A20. Case material: ceramic. Terminations: solder plate over nickel. Board edges straight.

B. MOUNTING
- B1. Mounting bracket available on request. Add suffix B to part number.
- B7. Pin's meniscus (of header) 0.015" max.
- B8. #2-56 UNC-2B mounting holes provided to .32" deep minimum.

C. MARKING
- C2. Consecutive marking n = no. of way power splitter.
- C4. RF input lead (1) identified by diagonally cut lead; may additionally have orientation mark. Model dash number identified by color dot or alphanumeric code on case. See Specification Data Sheet.
- C5. RF output is identified by index mark, model dash number by alphanumeric code.

D. CONNECTORS
- D6. Connectors: Female SMA only. Male SMA available on request, consult factory.
- D17. Connectors: Female SMA only.

E. SPECIAL TOLERANCES
- E1. Pin diameter ±.005 inch.
- E2. Lead width ±.010; lead thickness ±.005 inch.
- E5. For SCM mixers, long lead version (YY109) is available upon request; consult factory. To order short lead version (case YY101) add -NL suffix.

F. PACKAGING
- F0. Not available in Tape & Reel.
- F1-17. Tape and reel packaging available. See Tape and Reel Packaging Information for details.

*NOTES:

A. MATERIAL AND FINISH
- A4. Case material: aluminum alloy. Finish: irridite per MIL-C-5541.
- A6. Case material: aluminum alloy. Finish: blue paint over irridite.
- A10. Case material: aluminum alloy. Finish: grey paint.
- A11. Case material: aluminum alloy. Finish: blue anodized.
- A13. Case material: plastic. Lead finish: Tin plate.
- A16. Case material: ceramic. Lead material: #42 alloy. Finish: tin plate.
- A17. Case material: CRS. Lead material: kovar. Finish: gold plate 50 micro inches.
- A18. Mounting bracket finish: irridite or clear anodize.
- A19. Case material plastic, G-10 base. Termination finish: solder plate
- A21. Open-style, ceramic base. Termination finish: solder plate over nickel.

C. MARKING
- C2. Consecutive marking n = no. of way power splitter.
- C5. RF output is identified by index mark.
- C6. RF input lead (1) identified by diagonally cut lead. Orientation is also indicated by underline in marking.
- C7. lead #1 is identified by diagonally cut lead, located near letter M in marking.

D. CONNECTORS
- D17. Connectors; Female SMA only.
- D23. Connectors. Please specify female type N or SMA.

E. SPECIAL TOLERANCES
- E2. Lead width ±.010; lead thickness ±.005 inch.
- E3. Lead width ±.005; lead thickness ±.002; cap diameter ±.005 inch.
- E4. All tolerances are ±.005 except where minimum or maximum limits are shown.

F. PACKAGING
- F1-17. Tape and reel packaging available. See Tape & Reel packaging information for details.

designers kits

Mini-Circuits offers a wide range of plug-in and surface-mount component kits to aid the engineer during the evaluation, design, and prototype stages. In addition, there are kits offered to provide components for use in the testing laboratory. These kits contain a carefully-selected group of models that will enable the largest versatility of usage by the engineer.

As an example of Mini-Circuit's quest to exceed our customer's expectations, these kits are priced up to 40 percent lower than the cost of individual units and are available from stock.

Mini-Circuit's Applications Support Team

Mini-Circuit's is dedicated to providing our customers world class quality of service, support, and products. This handbook, with over 740 pages of technical data, represents one element of our program to support our customers. Another very important and dynamic element is our Applications Support team.

Our team of dedicated Applications engineers are prepared to respond courteously, promplty, knowledgeably, and patiently to questions and challenges posed by customers.

Whether on the phone to provide customers with immediate answers to specifications; or helping customers select the best cost/performance component for their particular application; or engaging in serious discussions on creating custom devices that are currently not available in the marketplace; or visiting customer facilities for technical meetings and seminars, our engineers will always be available to help you.

... guide the customer through decision making on spec requirements ...

Despite our wide variety of over 1,000 signal-processing components listed in this Handbook and our catalogs, there is often a need to meet a spec somewhat different than one listed for a standard catalog item; perhaps a mixer with a slightly lower conversion loss, or an amplifier with just a little more gain, or a filter with a cutoff frequency a trifle higher than a catalog model. Here's how our Applications engineer proceeds:

1) Each section of this Handbood includes a Specifications Check List which customers are asked to review. This sheet includes the pertinent parameters for the product and is intended to guide the customer through decision making on spec requirements and the most critical parameters for the intended publication.
2) Our Applications engineer will work with our Design Engineering team to check the feasibility of designing a new product to meet the specific spec; of course, if modification of an existing product is possible, this approach can slash development time and costs.
3) If the design is indeed feasible, samples will be fabricated, tested to assure they meet the intended design goals, and then shipped to the customer for final evaluation in the intended application.

Here is a brief summary of services available from our Applications Support team:

- respond to technical questions regarding specs and performance of catalog components and applications of our products.
- provide more detailed CAPD (computer-automated performance data) than published in our catalogs, product data sheets, and Handbook. Although our published CAPD data is quite comprehensive, we strongly urge our customers to request more detailed data when their application needs (very narrow bandwidth, tight IM specs, linear filter phase response, etc.) dictate a closer look at specific measurement points. Our enormous database on catalog and custom models is offered, at no extra charge, to eliminate any need for guesswork on the part of design engineers striving to deliver a cost-effective and reliable system.
- analyze customer specifications and recommend, wherever possible, a catalog component that provides the optimum cost/performance selection.
- discuss, in detail, MIL-specs that may appear confusing to customers first encountering them. What they mean, definitions of terms, and how to be in conformance are explained to lighten the load at the customer's site.
- correlate customer's test requirements with those of our Computer Test department.
- review customer's environmental requirements and suggest, where applicable, cost-effective solutions.

... offer test procedures and statistical data ...

- after determining critical parameters dictated for a customer's requirement, offer test procedures and statistical data to most effectively focus on those parameters.
- keep customers aware of our latest new products during discussions of applications and new system designs.
- interface with customers requesting Return Merchandise Approval (RMA). Quite often a courteous and thorough discussion relating to a component's failure to meet specs may be traced to improper test setup, poor matching, or other problems at the customer site; suggested solutions often negate the need to return the product.
- respond to customer requests for literature. Quickly send catalogs, notes, computerized test data, statistical data, or new product data.

We encourage our customers to take full advantage of our Applications Support group's expertise. Contact us with any questions you may have, problems we may be able to solve for you, and assistance on recommending products in our catalog line or in developing new designs for your next generation system. We promise a prompt, courteous, and perceptive response.

SPECIAL PRODUCTS

contents of this section

all about our special products 41
bias-t 42
instrument amplifiers 43, 44
impedence matching pad 45

computer data and curves

CAPD information ..... 42 thru 45

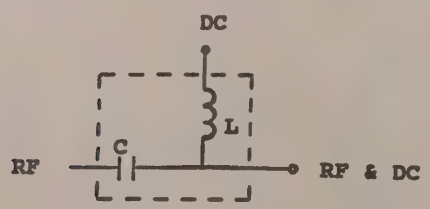
all about our special products

Standard catalog products provide a choice of case styles, having different mounting or connector configurations. For example, a 7 dBm mixer is available in surface mount (RMS, LRMS, SYM, TUF-SM), metal shield plug-in (SBL, SRA), and miniature shield (TFM, TSM) cases, as well as connectorized cases (ZP, ZLW, ZAD, ZEM, ZFM, ZAM). Most of our products can be supplied in a similar range of configurations. As wide as this choice is, it may not cover your intended application.

For example, using a standard splitter from the catalog may result in your needing adapters to mate with a different kind of connector in your system, or you may require custom cables. Either way will increase your overall cost. We are receptive to your special requirements, and can offer custom case styles to reduce the cost of your project. The figure at lower right illustrates a power splitter with 3 built-in cables for the output. The unit has a dedicated pin at the bottom for the input, as well as pins for mounting the unit. These custom features enable it to be used without external cables or mounting hardware. It also has a shielded case and can operate in a severe humid environment. Sounds too expensive? Not at Mini-Circuits. We can produce custom components with very competitive pricing. All custom requirements receive special attention from our Applications Department. So, if you need something special, do not compromise. We can help you in special ways which will reduce your cost and improve reliability by minimizing overall component count.

bias-tee

Supplying RF and DC to active devices is accomplished by a simple network as shown.



Internal capacitor C blocks the DC from exiting the RF port, and the inductor L provides high impedance to RF signals and therefore isolates the DC source from the RF signal path. Thus, RF and DC are combined at the port designated "RF & DC", which feeds the active device. The amount of DC voltage that can be applied is limited by the breakdown voltage of the capacitor. As DC current is increased approaching magnetic saturation of the inductor, insertion loss at low RF frequency increases and isolation from the RF to DC port decreases. So, it is necessary to limit the DC current to the maximum value specified, 200 mA.

Wideband performance of the bias-tee is helpful in pulse operation and wideband characterization of active devices. The device can also be used as a DC block by leaving the DC port open, shorted, or terminated in a 50-ohm load.

instrumentation amplifier

An instrumentation amplifier consists of an amplifier and integral DC power supply, and is powered by 110V or 220V AC. This self-contained amplifier uses less bench space than an equivalent modular amplifier and separate DC supply. It has integral forced-air coding to maintain its components at proper operating temperatures, and a front-panel LED indicator which warns of any operating conditions causing excessive heating of the amplifier.

Mini-Circuits has three instrumentation amplifiers covering the 0.5-1000 MHz range, having power output to 40 dBm at 1 dB compression, and 45dBm at saturation. This capability helps characterization testing of high power devices. These continuous wide bandwidth amplifiers require no turning and can be driven from low power sources to provide high power with low distortion over their entire bandwidth. They are suitable for swept, fixed frequency, CW or pulse operation in a wide variety of laboratory, industrial, test and communication applications including, RF, television, EMI susceptibility and antenna testing; magnetic resonance imaging and nuclear magnetic resonance spectroscopy.

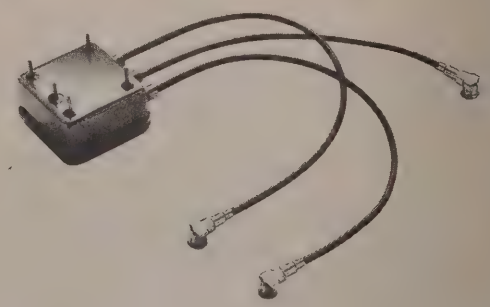
impedance matching pad, 50 to 75 ohms

BMP-5075 is a matching pad which transforms 50 ohms impedance to 75 ohms an d vice versa.

It is a minimum loss resistive transformation network having a wide bandwidth, DC-2000 MHz. Its most common application is in measurement of 75 ohms devices. Most commonly available instrumentation have 50 - ohm characteristic impedance. This can be converted to 75 ohms by using the BMP-5075 matching pad. To ensure precision interface, the pad has 75-ohm and 50-ohm BNC connectors at the corresponding ends.

Good frequency response is very important to minimize the droop of pulse signals and allow characterizing them accurately. This is accomplished in a 75-ohm system with the BMP-5075, which has response down to DC.

example of a special product: power splitter with cables



3 Way VHF Band Power Splitter/Combiner. This unit is printed circuit board mountable and has RG178 (50-ohm) cables directly pigtailed into its three outputs. Eliminating the use of output connectors allows miniaturization of the entire design to be performed. The rugged body design plus the special strain relief mechanism on the cables make such units capable of operating under vigorous vibration conditions.

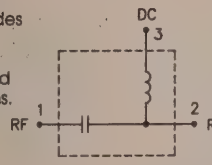
L = low range (f_L to 10 f_L) M = mid range (10 f_L to f_U/2) U = upper range (f_U/2 to f_U)

features

- Wide band coverage 0.1 to 6000 MHz
- Low insertion loss 0.6 dB typ.
- Good isolation 40dB typ.
- Small size 1.25" x 1.25" x 0.75" (Excluding connectors)

applications

- Biasing amplifiers
- Biasing of laser diodes
- DC return
- DC blocking
- Good for digital and analog applications.



NOTES:

* Insertion loss and isolation are guaranteed up to 20 dBm-RF power and 200 mA DC current.
** VSWR measured with open and short at DC port.
✣ Insertion loss 1 dB Max. and isolation 7 dB Min. 0.1 to 0.3 MHz.
▼ Connectors: SMA-F at "RF", "DC", and SMA-M at "RF & DC" port.
A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings"
C. Prices and specifications subject to change without notice.
1. Absolute maximum power, voltage and current ratings:
   1a. max. input current: 500 mA
   1b. max. RF power: 30 dBm
   1c. max. voltage at DC port: 30V
2. DC resistance from DC to RF & DC port: 4.5 ohm typical.

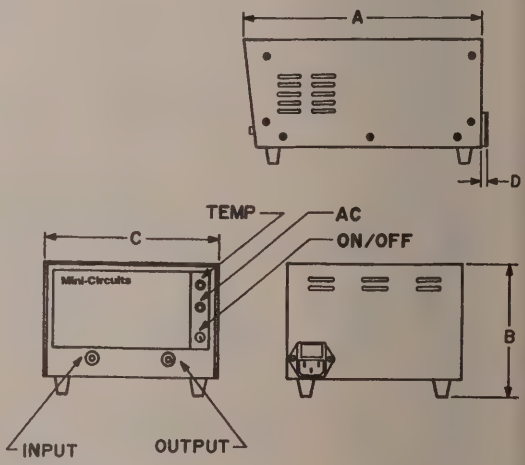
Features

- Wide bandwidth, 0.5-1000 MHz, 50-ohm amplifiers
- Instrument model, with built-in power supply, 110/220V operation
- High Power Output, (at 3.5 dB compression)
  45 dBm TYPICAL FOR TIA-900-10
  42 dBm TYPICAL FOR TIA-1000-4
  37 dBm TYPICAL FOR TIA-1000-1R8
- High Gain, 38 dB TYPICAL FOR TIA-1000-1R8
  34 dB TYPICAL FOR TIA-900-10
- High Reverse Isolation, 80 dB TYPICAL FOR TIA-900-10
  AND TIA-1000-1R8
  55 dB TYPICAL FOR TIA-1000-4
- 100% Burn-in at +25°C, 48 hours
- Thermally self-protected, led indicator



Notes:

* NF above 400 MHz. At low frequency, NF increases to 16 dB Typ.
A. General Quality Control Procedures, Environmental Specifications, HI-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
C. Prices and Specifications subject to change without notice.
1. Add dash 2 (-2) to model no. for 220V operation.
2. Gain and maximum output power specified at 25°C ±5°C., over temperature, specifications degrade approximately 1dB, gain flatness ±2.5dB maximum for TIA-1000 1R8 and TIA-1000-4.
3. With no load, max. input (no damage) reduce by 10 dB.
4. VSWR specified at:
   350-900 MHz FOR TIA-900-10
   350-1000 MHz FOR TIA-1000-4
   340-1000 MHz FOR TIA-1000-1R8
5. Operating temperature: 0°C to +55°C.
   Storage temperature: -40°C to +70°C.

Outline drawing and dimensions.

Case No.		A	B	C	D	wt. grams.	NOTES
AP175	inch	9.8	5.0	6.7	0.2	3500	A10, D7, G1, G2
	mm	248.9	127.0	170..2	5.1

	mm	495.3	152.4	317.5	5.1		

A10. Case material; aluminum alloy. Finish, grey paint.
D7. Connectors: BNC only.
G1. Keep area adjacent to fan and louvers clear to permit air flow to pass. Caution: Do not insert anything especially conductors or fingers into case opening. Physical injury shock or death may occur.
G2. Configured for either 110 volt or 220 volt AC operation; specify when ordering

SURFACE MOUNT MIXERS

...with a difference

actual size

up to 1900MHz from $6.25

Now available, a large variety of tiny, ultra-rel high performance mixers to handle your applications from extra wideband, high isolation, low two-tone third-order IM, to very low +3dBm LO power. Mini-Circuits' new LRMS-series Ultra-Rel™ mixers are offered with a difference... unprecedented reliability. Units are manufactured with Ultra-Rel diodes, all-welded construction, metal stubs to all connections, and to 4.5 sigma performance repeatability. Each Ultra-Rel™ LRMS mixer can withstand strenuous shock and vibration, will perform over a -55° to +100°C range, and is guaranteed for five years. Aim for 4.5 sigma repeatability in your product designs by specifying Mini-Circuits' Ultra-Rel™ LRMS mixers, available for immediate delivery in tape-and-reel format (500 units, 16mm width) at prices from $6.25.

SPECIFICATIONS: all spec limits are 4.5 σ from mean

features

- low LO power: 3 dBm.
- RMS-2L is usable at 0 dBm LO.
- wide band coverage: 400-1400 MHz.
- 1 dB compression, −3 dBm typical.
- miniature surface mount (0.25″ x 0.31″ x 0.2″).
- conversion loss spec limit 4.5 σ typical from mean.
- ideal for cellular applications.

L = low range (f_L to 10 f_L)

M = mid range (10 f_L to $f_U/2$)
m = mid band ($2f_L$ to $f_U/2$)

U = upper range ($f_U/2$ to f_U)

NOTES:

- $\bar{x}$ Average of conversion loss at center of mid-band frequency ($f_L+f_U/4$)
- σ Standard deviation
- ❑ Non-hermetic
- ☆ HTRB tested, 5-year guarantee
- † Phase detection, positive polarity
- * Conversion loss 9.5dB maximum from 0.01 to 0.015 MHz
- ** Conversion loss 10dB maximum at IF=1000 MHz
- A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
- B. Connector types and case mounted options, case finishes are given in section 0, see "Case Styles & Outline Drawings".
- C. Prices and Specifications subject to change without notice.
- 1. Absolute maximum power, voltage and current ratings:
  - 1a. RF power, 50mW
  - 1b. Peak IF current, 40mA

L = low range (f_L to $10f_L$) M = mid range ($10f_L$ to $f_U/2$) U = upper range ($f_U/2$ to f_U)
m = mid band ($2f_L$ to $f_U/2$)

NOTES:

- $\bar{x}$ Average of conversion loss at center of mid-band frequency ($f_L+f_U/4$)
- σ Standard deviation
- ● Surface-mount, non-hermetic, available on tape and reel
- ❑ Non-hermetic
- † Phase detection, positive polarity
- ▽ For surface-mount version add suffix SM (case style NNN150); available on tape and reel.
- * L=50-100 MHz; M=100-500 MHz
- ** Below 10 MHz IF, conversion loss increase up to 6 dB higher as frequency decreases to DC.
- *** Price for quantities 10-49
- A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
- B. Connector types and case mounted options, case finishes are given in section 0, see "Case Styles & Outline Drawings".
- C. Prices and Specifications subject to change without notice.
- 1. Absolute maximum power, voltage and current ratings:
  - 1a. Level 10 mixers, RF power 50mW
  - 1b. Level 13 mixers, RF power 200mW (except RMS-MH, 150mW)
  - 1c. Peak IF current, 40mA

L = low range (f_L to 10 f_L) M = mid range (10 f_L to f_U/2) U = upper range (f_U/2 to f_U)

m = mid band (2f_L to f_U/2)

NOTES:

- $\bar{x}$ Average of conversion loss at center of mid-band frequency (f_L+f_U/4)
- σ Standard deviation
- ● Surface-mount, non-hermetic, available on tape and reel
- ❑ Non-hermetic
- ☆ HTRB tested, 5-year guarantee
- † Phase detection, positive polarity
- ▽ For surface-mount version add suffix SM (case style NNN150) which is available on tape and reel.
- A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
- B. Connector types and case mounted options, case finishes are given in section 0, see "Case Styles & Outline Drawings".
- C. Prices and Specifications subject to change without notice.
- 1. Absolute maximum power, voltage and current ratings:
  - 1a. RF power 200mW
  - 1b. Peak IF current, 40mA
- 2. Two-Tone 3rd order IM below IF, each tone at 0dBm (200 and 202 MHz), LO at +17dBm (180 MHz). All models 60dB typ., 55dB min., except 55dB typ., 45dB min. for TFM-3H, TAK-3H, ZFM-3H, ZLW-3SH, ZAD-3SH.

L = low range (f_L to 10 f_L) M = mid range (10 f_L to f_U/2) U = upper range (f_U/2 to f_U)

NOTES:

- ● Surface-mount, non-hermetic, available on tape and reel
- ✪ When only specification for M range given, specification applies to entire frequency range.
- ✣ At low range frequency band (fL to 10 fL), linearly derate maximum input power by 13 dB.
- ■ Denotes 75 Ohm model, for coax connector models 75 Ohm BNC connectors are standard.
- * VSWR typical 1.1:1 over total range of frequency, max 1.2:1 for low and upper range, max 1.15:1 for mid range.
- ** VSWR low range 1.1:1 typical, 1.3:1 max; upper range 1.15:1 typical, 1.25:1 max.
- A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
- B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".
- C. Prices and specifications subject to change without notice.
- 1. Absolute maximum power, voltage and current ratings:
  - 1a. Matched power rating, 1 Watt except PSC-2-11, 0.5 Watt
  - 1b. Internal load dissipation, 0.125 Watt

L = DC to 100 MHz M = mid range (100 MHz to $f_U/2$) U = upper range ($f_U/2$ to f_U)

Above models are resistive power dividers to enable frequency coverage from dc to the highest rated frequency. Since resistive power dividers do not provide a high degree of isolation (basically isolation equals the insertion loss between ports), an amplifier such as Mini-Circuits' ZFL series is recommended when high isolation is required. Matched power rating 0.75W, internal load dissipation 0.375W.

NOTES:

* Isolation specified to 0.004 MHz
o When only specification for M range given, specification applies to entire frequency range.
✣ At low range frequency band (fL to 10 fL), linearly derate maximum input power by 13 dB.
■ Denotes 75 Ohm model, for coax connector models 75 Ohm BNC connectors are standard.
▲ Available only with BNC connectors
△ Available only with SMA connectors
A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".
C. Prices and specifications subject to change without notice.
1. Absolute maximum power, voltage and current ratings:
1a. Matched power rating, models ZAPD, ZN2PD, ZC2PD 10 Watt other models 1 Watt
1b. Internal load dissipation 0.125 Watt

pin and coaxial connections

L = low range (f_L to 10 f_L) M = mid range (10 f_L to f_U/2) U = upper range (f_U/2 to f_U)

NOTES:
- * Phase unbalance is 3 degrees max from fL to 3 fL.
- ✪ When only specification for M range given, specifications applied to entire frequency range.
- ● Surface-mount, non-hermetic, available on Tape and Reel.
- ■ Denotes 75 Ohm model, for coax connector models 75 Ohm BNC connectors are standard.
- △ Available only with SMA connectors.
- ✣ At low range frequency band (fL to 10 fL), linearly derate maximum input power by 13 dB.

A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".
C. Prices and specifications subject to change without notice.
1. Absolute maximum power, voltage and current ratings:
   1a. Matched power rating, 1 Watt, except models PSCJ-2-1W and SCPJ-2-1W-75 0.5 Watt
   1b. Internal load dissipation 0.125 Watt

see Performance Data and curves

L = low range (f_L to 10 f_L) M = mid range (10 f_L to f_U/2) U = upper range (f_U/2 to f_U)

NOTES:

* Isolation 25 dB, -55 to 0 deg.C over 0.01-0.1 MHz

● Surface-mount, non-hermetic, available on tape and reel

■ Denotes 75 Ohm model, for coax connector models 75 Ohm BNC connectors are standard.

✣ At low range frequency band (f_L to 10 f_L), linearly derate maximum input power by 13 dB.

✪ When only specification for M range given, specifications applied to entire frequency range.

A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.

B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".

C. Prices and specifications subject to change without notice.

1. Absolute maximum power, voltage and current ratings:
   - 1a. Matched power rating, models ZA3PD, ZN3PD 10 Watt; other models 1 Watt
   - 1b. Internal load dissipation 0.375 Watt

L = low range (f_L to 10 f_L) M = mid range (10 f_L to f_U/2) U = upper range (f_U/2 to f_U)

NOTES:

- ● Surface-mount, non-hermetic, available on tape and reel
- ■ Denotes 75 Ohm model, for coax connector models 75 Ohm BNC connectors are standard.
- ○ When only specification for M range given, specification applies to entire frequency range.
- ✥ At low range frequency band (f_L to 10f_L), linearly derate maximum power by 13 dB.
- * Maximum VSWR: input 1.5:1, output 1.3:1
- ** Frequency range L=f_L to f_U/2. Up to 15V and 15mA DC may be passed from input to all outputs.

A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.

B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".

C. Prices and specifications subject to change without notice.

1. Absolute maximum power, voltage and current ratings:

1a. Matched power rating,
Models ZA4PD, ZB4PD-4, ZB4PD1, ZN4PD, ZC4PD 10 Watt
Models PSC-4-5, PSC-4-1W, SCP-4-1W, ZCSC-4-1W 0.5 Watt
All other models 1 Watt

1b. Internal load dissipation,
Model ZB4PD-1750-75 0.750 Watt
Models ZA4PD, ZB4PD-4, ZB4PD, ZB4PD1, ZN4PD, ZC4PD, ZCSC 0.375 Watt
All other models 0.250 Watt

L=low range (f_L to 10 f_L) M=mid range (10f_L to f_U/2) U=upper range (f_U/2 to f_U)

NOTES:

■ Denotes 75 Ohm model, for coax connector models 75 Ohm BNC connectors are standard.

o When only specification for M range given, specification applies to entire frequency range.

✣ At low range frequency band (f_L to 10 f_L), linearly derate maximum input power by 13 dB.

' For adjacent ports, isolation is 28 dB minimum.
Adjacent ports defined as: (1,3) (5,7) (9,11) (13,15)
(2,4) (6,8) (10,12) (14,16)

A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.

B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".

C. Prices and specifications subject to change without notice.

1. Absolute maximum power, voltage and current ratings:
1a. Matched power rating, 1 Watt
1b. Internal load dissipation, 0.87 Watt

Using the Selection Guide

Locate the Mini-Circuits' amplifier best suited for your particular application quickly with this convenient Selection Guide. Amplifiers are grouped into eight major categories and then listed in the sequence of frequency span.

If your amplifier requirements are not met by the catalog models listed, we encourage you to contact our Application Engineering Department. You will find them courteous and eager to support your needs with their depth of knowledge coupled with our extensive database on engineering and catalog models.

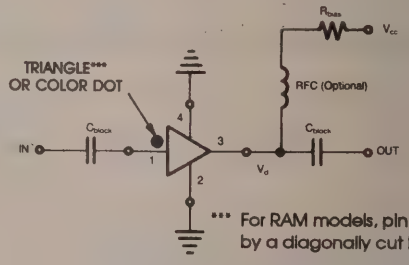
Typical Biasing Configuration



*** For RAM models, pin 1 is identified by a diagonally cut lead.

NOTES:

- •• Typical gain at 1500 MHz
- ❑ Non-hermetic
- ● Surface-mount, available on tape and reel
- ◆ Price of MAR-1 and MAR-1SM are for 100 quantity, price of RAM models is for 1-9 quantity.
- # Dash-8 models input and output impedances are not 50 ohms, see S-parameter data. Conditionally stable, source and load VSWR<3:1 required. Dash-6 models conditionally stable, source and load VSWR<5:1 required.
- ○ Low frequency cutoff determined by external coupling capacitors.
- B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & outline drawings".
- C. Prices and specifications subject to change without notice.
- D. For Quality Control Procedures see section 0, "Mini-Circuits Guarantees Quality" article. For Environmental Specifications see page 3-13.
- 2. Minimum gain at highest frequency and over full temperature range.
- 3. Model number designated by color dot or alphanumeric code marking.
- 4. Frequency at which output power, NF and IP3 are specified: 500MHz for MAR-1, MAR-6, MAR-1SM, MAR-6SM, RAM-1, RAM-6, MAV-1, MAV-11, VAM-6, 1000MHz for all other models.
- 5. MAV-1SM thru MAV-11SM available on tape and reel, see case style RRR137 outline drawing.
- 6. Dash-6 models potentially unstable with very high VSWR terminations.

features

- cascadable
- excellent repeatability
- wide bandwidth DC-2000 MHz
- unconditionally stable, except MAR-6, MAR-6SM, RAM-6, VAM-6, MAR-8, MAR-8SM, RAM-8
- low cost, MAR, MAV, VAM models
- hermetically sealed, RAM models
- low noise figure, 2.8 to 3.6 dB typ. MAR–6, MAR–8, MAV–11, RAM–6, RAM–8, VAM–6
- high output power, +17 dBm typ., MAV–11

L_W = Low Range (f_L to $f_{u/2}$) m = mid Range (2 f_L to $f_{u/2}$) U = Upper Range ($f_{u/2}$ to f_u)

features
- ideal for printed-circuit designs (MAN & AMP series)
- smooth response over entire band, no external resonances
- low impedance, less susceptible to EMI
- easy to use, 50 ohm input/output
- all models are cascadable

NOTES
* VSWR 1.6:1 maximum from 0.1 to 0.2 MHz. Also available with BNC connectors.
△ Available only with SMA connectors
B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & outline drawings".
C. Prices and specifications subject to change without notice.
D. For Quality Control Procedures see section 0, "Mini-Circuits Guarantees Quality" article. For Environmental Specifications see page 3-13.
1. Absolute maximum power, voltage and current rating:
1a. AMP models, 17V DC.
1b. MAN models, 12.5V DC.
2. With no load at output, derates maximum input power (no damage) by 10 dB.
3. ZEL and TO models, NF specified at room temperature, increases to 2 dB typical at +85 deg.C.
4. ZHL models, NF specified at room temperature, increases to 2.3 dB maximum at +65 deg.C.

features

- very low noise
- high dynamic range (ZHL–HLN series)
- ideal for printed-circuit designs (TO series)
- smooth response over entire band, no external resonance
- easy to use, 50 ohms input/output
- all models are cascadable

NOTES:

▽ Four different case styles available:
NAT (N connectors) case style FF57
CAT (BNC connetors) case style FF55
SAT (SMA connecotors) case style FF56
TAT (TNC connectors) Please consult factory

■ Denotes 75 ohm models. For coax connector models 75 ohm BNC connectors are standard.

A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.

B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & outline drawings".

C. Prices and specifications subject to change without notice.

1. Absolute maximum power, voltage and current rating:
1a. RF power for AT, CAT, NAT, TAT 1 Watt
1b. RF power for MAT, SAT 0.5 Watt
1c. RF power for all terminations 0.25 Watt

L = 10 to 100 MHz M = 100 to 500 MHz U = 500 to 1000 MHz

features

- wide frequency band, 10-1000 MHz
- excellent step accuracy, 0.2 dB typ.
- excellent VSWR, 1.3 typ.
- low DC current, 6 mA typ.
- operates over -55° to 100 °C
- small case, 0.6" dia., TO-8

Additional Specifications

DC Voltage +5V
DC current 10mA max.
Switching Time (50% TTL to within specified accuracy of the next-selected attenuation step, and to within 0.1 dB of steady-state Thru-Loss) 10 µs typ., 15µs max.
TTL input High Threshold 2V min.
TTL input Low Threshold 0.8V max.
TTL Toggle Rate: 50 kHz typ.
1dB compression: 0 dBm (10-100MHz)
+10dBm (100-1000MHz)
For ZSAT-31R5:
1dB compression: +10 dBm (10-100 MHz)
+15 dBm (100-1000 MHz)

NOTES:

* For ZSAT-31R5: Total attenuation (1,1,1,1,1,1)
Thru-Loss (0,0,0,0,0,0)
** Total attenuation above thru-loss.
A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case Styles & Outline Drawings".
C. Prices and Specifications subject to change without notice.
1. Absolute maximum power, voltage and current rating:
1a. Input power, 15 dBm
1b. DC voltage, 5.5 Volts
1c. TTL, 5.5 Volts
1d. Storage temperature -55°C to +125°C for TOAT models.
2. Step accuracy is specified for basic steps. For combination of steps accuracy is additive.
3. Thru-loss is minimum insertion loss with all attenuation elements bypassed (All TTL controls state are Low).

Logic function:

TTL High activates associated in-line attenuation
TTL Low bypasses this attenuation

L = low range (f_L to $10f_L$) M = mid range ($10 f_L$ to $f_U/2$) U = upper range ($f_U/2$ to f_U)

features
- High power operation
- Very low insertion loss
- Excellent directivity
- Excellent VSWR, 1.1:1 typical
- Wide bandwidth, 30-400 MHz model ZFDC-20-1H and 40-400 MHz model PDC-20-R4-10W
- Cellular application, models PDC-20-R9, PDC-20-R97, ZFDC-20-R9BD, ZFDC-20-R97BD

NOTES:
* L = 30-100 MHz, M = 100-200 MHz
** L = 40-100 MHz, M = 100-200 MHz
✦ Bi-directional
△ Available only with SMA connectors.
° When only specification for M range given, specification applies to entire frequency range.
A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case Styles & Outline Drawings"
C. Prices and specifications subject to change without notice.
2. Mainline Loss includes theorical power loss at coupled port.
3. For PDC models, external heat sinking is recommended to reduce case temperature.

L = low range (f_L to $10f_L$) M = mid range (10 f_L to $f_U/2$) U = upper range ($f_U/2$ to f_U)

NOTES:

* L = 25-50 MHz, M = 50-300 MHz, U = 300-400 MHz
** Upper range coupling ±0.75 dB
*** Above 1000 MHz, coupling flatness ±1 dB.
✦ Bi-directional
✣ $L = f_L$-$2f_L$
✱ 4-coupled ports, isolation between coupled ports, 25 dB minimum.
● Surface-mount, non-hermetic, available on tape and reel
○ When only specification for M range given, specification applies to entire frequency range.
△ Available only with SMA connectors
■ Denotes 75 Ohm model, for coax connector models 75 Ohm BNC connectors are standard.
A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".
C. Prices and specifications subject to change without notice.
2. Mainline Loss includes theorical power loss at coupled port. All models are licensed under U.S. Patent 3,426,298.

NOTES:

* 35 dB for SCLF-380, SCLF-420 and SCLF-550 models
** 1dB compression at +13 dBm input power
● Surface-mount, non-hermetic, available on tape and reel.
■ Denotes 75 ohm model, for coax connector models 75 ohm BNC connectors are standard.
▽ Three different case styles available:
For SMA connector, case style FF99
BNC connector, case style FF55
N-type connector, case style FF57
A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & outline drawings".
C. Prices and specifications subject to change without notice.
1. Absolute maximum power, voltage and current rating:
1a. RF power, 0.5 Watt
2. Price shown is for B prefix, for N prefix add $3, for S prefix add $2.
3. Models are available with male/female coax connectors, for other configurations and inter-series versions consult factory. See section 0, case styles and outline drawings.

features

- Flat group delay for low pulse distortion.
- Delay and selectivity are both controlled by design.
- Wide selection of cutoff frequencies, 48-to-1 range. Custom Fco values are available.
- Choice of pin package of connectorized models.

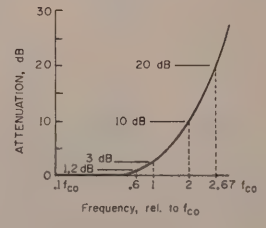
TYPICAL FREQUENCY RESPONSE
Insertion Loss



NOTES:

- • Connection for plug-in models (PIF, PBP, PBLP)
- ▼ _BLP-933 and _BLP-1870 available only with N and SMA connectors.
- ▽ Four different case styles available:
  For plug-in models, case style A01
  SMA connector models, case style FF99
  BNC connector models, case style FF55
  N-type connector models, case style FF57
- A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
- B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & outline drawings".
- C. Prices and specifications subject to change without notice.
- 1. Absolute maximum power, voltage and current rating:
  1a. RF power, 0.5 Watt
- 2. 2a. Price for PIF-series only, SIF $38.95, BIF $36.95, NIF $39.95
  2b. Price for PBP-series only, SBP $42.95, BBP $40.95, NBP $43.95
  2c. Price for PBLP-series only, SBLP $38.95, BBLP $36.95, NBLP $39.95
- 3. Models are available with male/female coax connectors, for other configurations and inter-series versions consult factory. See section 0, case styles and outline drawings.
- 4. All filters, except pin units (PIF, PBP and PBLP) are non-hermetic.

For connector selection, add prefix letter B, N, or S to _HP where applicable (see Note 2)

NOTES:

* Insertion loss 1.5 dB maximum
▽ Three different case styles available:
SMA connector models, case style FF99
BNC connector models, case style FF55
N-type connector models, case style FF57
A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & outline drawings".
C. Prices and specifications subject to change without notice.
1. Absolute maximum power, voltage and current rating:
1a. RF power, 0.5 Watt
2. Price shown is for B prefix, for N prefix add $3, for S prefix add $2.
3. Models are available with male/female coax connectors, for other configurations and inter-series versions consult factory. See section 0, case styles and outline drawings.

ADDITIONAL SPECIFICATIONS

VSWR ("ON" STATE): 1.3 TYP., 1.9 MAX.
SWITCHING TIME (QSEC): 2.0 TYP., 4.0 MAX.
1 dB COMPRESSION POINT: FROM 10-100 MHz INCREASE FROM 6 TO 19 dBm.
ABOVE 100 MHz, 19 dBm MIN.
SUPPLIED VOLTAGE: +5V
TTL INPUT HIGH THRESHOLD 2 VOLTS MIN.
TTL INPUT LOW THRESHOLD 0.8 VOLTS MAX.

NOTES:

** Video break through is defined as leakage of TTL switching signal to RF output ports.
● Surface-mount, non-hermetic, available on tape and reel; *(Except VSW and VSWA models are hermetically sealed).
✪ Typical isolation at 5 MHz is 80 dB and decreases 5 dB/octave from 5-1000 MHz.
A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.
B. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".
C. Prices and specifications subject to change without notice.
1. Absolute maximum power, voltage and current ratings for pin diode switches, TOSW and ZSDR models:
1a. RF input power, +20 dBm for low range frequency, +28 dBm for mid range frequency, +30 dBm for upper range frequency.
1b. Supply current, 10 mA.
2. Absolute maximum power, voltage and current ratings for GaAs switches, VSW, VSWA, YSW, YSWA, ZYSW AND ZYSWA models:
2a. RF input power, +22 dBm from DC to 2 GHz, +24 dBm from 2 GHz to 5 GHz.
2b. For YSWA, VSWA and ZYSWA, +20 dBm at "OFF" port, +24 dBm total.
3. For reflective switches, VSW, YSW, ZYSW models, OFF state of RF output is low impedance.

STORAGE TEMPERATURE: −55 to 150 Deg. C.
MTBF: 15 million hours at 55 deg. C, 11 million hours at 100 deg. C.

NOTES:

1. Surface-mount, non-hermetic, available on tape and reel,
2. Available only with SMA connectors
3. General Quality Control Procedures, Environmental Specifications, HI-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article. Connector types and case mounted options, case finishes are given in section 0, see "Case styles & Outline Drawings".
4. Prices and specifications subject to change without notice.
5. Absolute maximum power, voltage and current ratings for KSW, KSWA, ZFSW, ZFSWA models:
   1a. RF power input, +30 dBm except below 500 MHz +27 dBm;
   1b. Control voltage -10 V maximum.
6. Absolute maximum power, voltage and current ratings for MSW, MSWA models:

2a. RF power input, (25°C)		DC-100	100-500	500-2000	MHz
MSW-2-20:	Steady state 0/-8V control,	+23	+27	+31	dBm
	As modulator	+11	+17	+21	dBm
MSWA-2-20:	Steady state 0/-8V control,	+24	+27	+33	dBm
	As modulator	+12	+17	+23	dBm

   2b. Control current, 500μA (Occurs at -9V to -12V typical)
7. Absolute maximum power, voltage and current ratings for KSWHA, ZFSWHA models:

3a. RF power input, (Above 20°C derate power linearly to zero at 150°C.)	DC-20	20-500	500-2000	MHz
Steady state 0/-8V control,	+23	+30	+33	dBm
As modulator *	+14.5	+20	+27	dBm

   * In modulator service, unrestricted switching is permitted with RF applied.
   3b. Control current, 500μA (Occurs at -9V to -12V typical)
8. For reflective switches, KSW, ZFSW, MSW, models, OFF state of RF output is low impedance.
9. For surface-mount units, to ensure proper performance, connect case to upper PC board ground, and interconnect top and bottom PC board grounds very close to case location.

Transmit-Receive Switch: Application Note

The functional schematic diagram for a diversity application of the switch is shown in Figure 1, with the required external components including 4 independent drivers at the control ports. When operation as a transfer switch is desired only 2 drivers are needed, one connected to the V1 and V3 ports together, and the other connected to the V2 and V4 ports. In either case, two DC return paths are needed for the control voltages, represented by the ground symbols in the diagram. These returns must be via oppositely situated RF ports (Tx and Rx or J1 and J2), and can be furnished incidentally by the user's RF terminating devices themselves. However, if those devices are AC-coupled (that is, they contain DC blocking capacitors), then the shunt resistors shown in the diagram are needed. The resistors should be installed either at the Tx and Rx ports (connection shown as solid), or at J1 and J2 (shown dotted), with equal effect. If one external RF device has a DC return to ground, for example, then only one resistor is needed; it must be installed at the opposite RF port of the switch. The resistance of each of the external DC returns should be 20K ohms or less, for proper ON/OFF FETs.

NOTES:

* FOR A AND B CONFIGURATIONS:
Typical Amplitude Unbalance: 0.1 dB over 1 dB frequency range; 0.5 dB over entire frequency range.
Typical Phase Unbalance: 1.0° over 1 dB frequency range; 5.0° over entire frequency range.

▽ Three case styles available: Plug-in case style X65; Surface-mount case style KK81; Radial lead case style W38.

✲ Insertion loss referenced to mid-band loss

✣ Insertion loss is specified with input at pin 4 and output at pin 2, all other pins are grounded.

A. General Quality Control Procedures, Environmental Specifications, Hi-Rel, MIL and TX description are given in section 0, see "Mini-Circuits Guarantees Quality" article.

B. Connector types and case mounted options, case finishes are given in section 0, see "Case Styles & Outline Drawings".

C. Prices and Specifications subject to change without notice.

1. Absolute power, voltage and current ratings:
   1a. RF input power: For T2-1-2W and T4-1-2W, 2 Watt;
   All other models 0.25 Watt
   1b. DC current, 30mA

2. For T,TT, TH and TX series, operating temperature range is -20°C to +85°C.

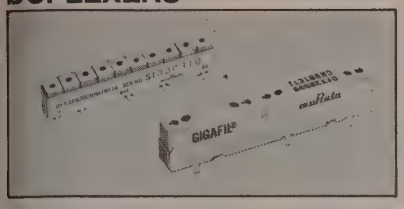
microwave products

MURATA ERIE NORTH AMERICA

DUPLEXERS



Murata Erie offers a complete selection of dielectric resonator-based Duplexers. Single package, separated pair and surface mount versions are available.

FEATURES

- Low insertion loss thru the use of dielectric resonators. • Small and light
- Excellent mechanical stability • High power ratings
- Excellent temperature stability thru temperature compensated dielectric constant (0 ± 5ppm/°C max.)

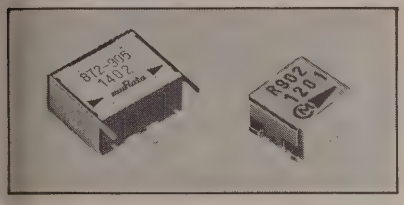
FILTERS

Murata Erie offers a wide selection of dielectric resonator-based filters (Gigafils®) specifically designed for telecommunications application.

FEATURES

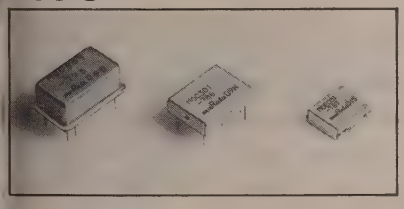
- Extremely low insertion loss • Small size and light weight
- Surface mount units available • Low V.S. W.R. Characteristics
- Excellent temperature and mechanical stability

ISOLATORS



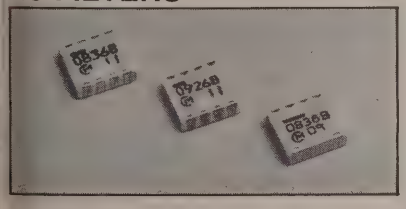
Murata Erie microwave isolators feature small size for surface mounting combined with excellent electrical performance. Typical isolation is 12 dB within insertion loss of 0.9 dB. Power ratings 2.5 to 10W depending on model.

VCO'S



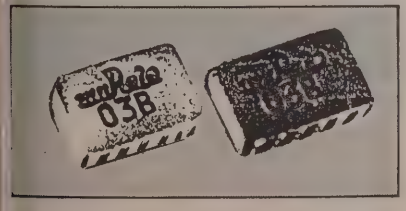
Compact VCO's designed for mobile communications applications are also included in the Murata Erie line of dielectric resonator-based products. These devices are designed for local oscillator use in the high MHz ranges and offer excellent mechanical and frequency stability in compact packages.

LC FILTERS



Monolithic Chip LC Filter

Murata Erie's LC Chip Filter offers an alternative to discrete component filtering. Monolithic layer technology makes the small size, 5.7 x 5.0 x 2.2mm and 4.5 x 3.21 x 1.5mm, possible. Additional features include integral metal shields, surface mount capability, and tape and reel packaging. The filters are available in bandpass and lowpass responses and cover a range of frequencies from 250 MHz to 3.0 Ghz.



Monolithic Directional Coupler/Power Divider

Murata Erie's new directional couplers utilize multi layer technology to reduce the board space associated with conventional couplers. The couplers are available to operate in a variety of frequency ranges within the overall range of 800MHz to 3GHz. Coupling values include 10, 14, and with other options possible. In addition to the directional couplers 3dB power dividers are available with 90°, phase shift. There are several size package options depending upon the power rating of the device. Sizes include 4.5 x 3.2 x 1.5mm up to 8.0 x 5.0 x 2.1mm. Both parts are surface mountable, IR reflowable, and packaged in tape and reel for auto insertion.

Noise Com: Quality. Performance. Service.

From the leader in noise sources.

Hermetically sealed noise diodes

NC 100 through NC 400 Series

DC to 110 GHz

- Chips and five package options
- Flat output
- Operating temperature -55 to +125° C
- Storage temperatures -65 to +150° C
- Meet MIL-STD-750
- Wide variety of packages

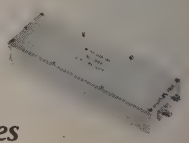
Drop-in noise modules for BITE applications

NC 500 Series

200 kHz to 5 GHz

- Drop-in TO-8 packages
- Economical solution to BITE
- 31 dB or 51 dB ENR
- Minimum crest factor 5:1
- Operating temperature -55 to +85° C
- Storage temperature -65 to +175° C
- Temperature coefficient 0.01 dB/° C
- 50-ohm Load impedance

Amplified noise modules

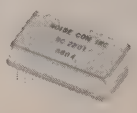


NC 1000 Series

DC to 6 GHz

- High power—up to 13 dBm
- Female SMA connector (BNC available as option)
- Flat response— ±0.75 dB
- Operating temperature -35 to +100° C
- Storage temperatures -65 to +150° C

Plug-in amplified noise modules



NC 2000 Series

100 Hz to 2000 MHz

- 24-pin and 14-pin packages
- Minimum crest factor 5:1
- High-end roll off 6 dB per octave
- Operating voltage of +15 VDC, +12 VDC optional
- Storage temperature -65 to +125° C
- Operating temperature -55 to +85° C
- Temperature coefficient 0.025 dB/° C typical

Calibrated coaxial noise sources

NC 3000 Series

10 kHz to 40 GHz

- Noise output rise and fall times less than 1 μS
- 6, 15.5, 30 dB ENR and higher outputs available
- Noise output variation with temperature less than 0.01 dB/° C
- Noise output with voltage less than 0.1 dB/% Δ V
- Operating temperature -55 to +85° C
- Storage temperatures -65 to +125° C
- Maximum input power +28 VDC at 20 mA

Calibrated millimeter-wave waveguide noise sources

NC 5000 Series

18 to 110 GHz

- Narrow or wideband performance with low or high output
- Noise output rise and fall times less than 1 μS
- VSWR less than 1.35:1
- Noise output variation with temperature less than 0.01 dB/° C
- Noise output with voltage less than 0.1 dB/% Δ V
- Operating temperature -55 to +85° C
- Storage temperatures -65 to +125° C
- Maximum input power +28 VDC at 20 to 30 mA (+15 VDC available)

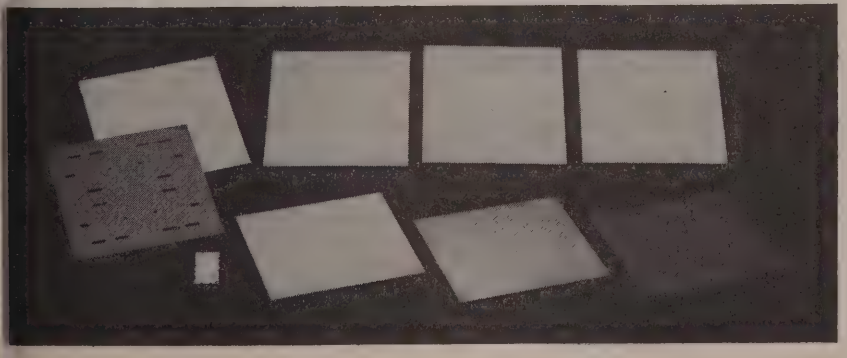
Thermal conductivity (cal/cm-sec.°C)	0.06	0.0044	0.0067	0.0060
Water absorption (%)	<0.01	<0.01	<0.01	<0.01

NTK DIELECTRIC SUBSTRATES FOR MICROWAVE USE



FEATURES
- Surface finish to .2 microns
- Available with plating
- High Q
- Excellent uniformity
- Wide range of available thickness

APPLICATIONS
- Microwave substrates
- Precision capacitors
- Stripline filters

Shape		Material	Dielectric constant K	Temperature coefficient of capacitance (ppm/°C)	Q (= 1/tan δ) Measured frequency	Linear expansion coefficient (ppm/°C)
A ± 0.2 (m/m)	T ± 0.02 (m/m)					
20 ~ 60	0.2 ~ 2.5	A	12.6	0 ± 30	18000 (13GHz)	7.6

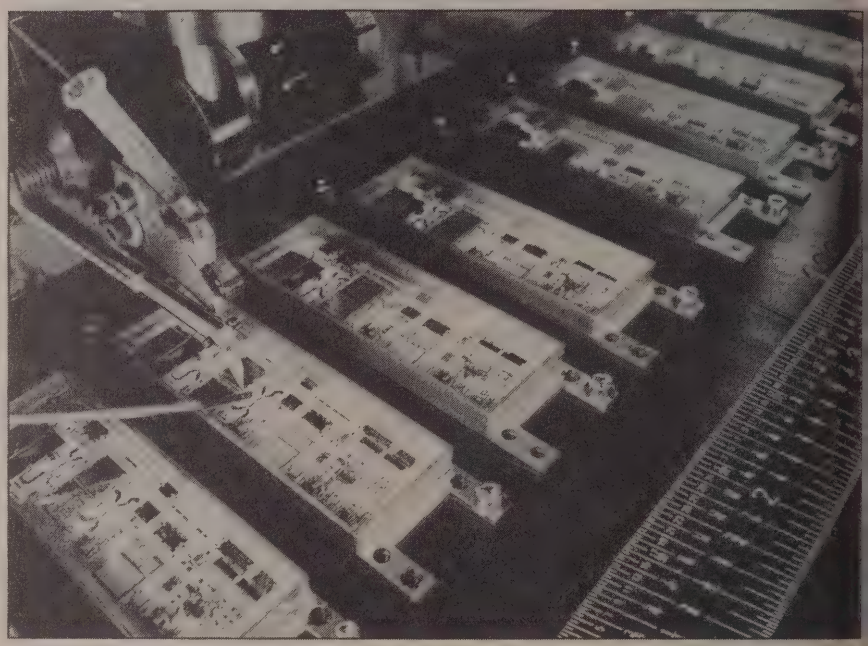
Raytheon

Solid State Transmit / Receive Modules

Raytheon Company, a leader in advanced electronics and systems for military, space and commercial markets, offers a full line of high quality Solid State Transmit / Receive Modules to meet your high performance radar and wireless communication system needs. Developed primarily for advanced military radar systems, active aperture solid state transmit / receive modules provide high transmit power over narrow or wide operating bandwidth, low noise receive operation and high system reliability. Raytheon high performance GaAs Monolithic Microwave Integrated Circuit (MMIC) components and advanced multilayer ceramic substrates are assembled in a lightweight, compact hermetic package in our automated production line. Raytheon T/R Modules power ground based radars, satellite communications arrays and Intelligent Vehicle Highway Systems.



Raytheon's Automated Assembly Lines Can Produce 10,000 Solid State T/R Modules Per Month

Raytheon T/R Modules Meet Your Advanced System Requirements

Raytheon can apply its leadership in phased array radar systems development, GaAs MMIC device and advanced ceramic materials and manufacturing technology to meet your advanced systems needs. Raytheon solid state modules are available at UHF, VHF, RF and MMW frequencies. Wideband modules are available for high performance applications. High efficiency Raytheon solid state T/R modules support pulsed and continuous wave radar systems, satellite communications systems, DBS and GPS receivers, and advanced avionics systems.

Proven Raytheon GaAs MMIC chip designs for low noise and power amplifiers, mixers, and control circuits provide the basis for Raytheon high performance T/R Module products. Up to 10 Watts per module has been achieved at X-Band. High gain, high output power, low noise wideband modules demonstrate excellent gain and phase uniformity. We can manufacture either Thin Film Networks (TFN) or Low Temperature Cofired Ceramic (LTCC) for low cost, multilayer substrate architectures.

Raytheon

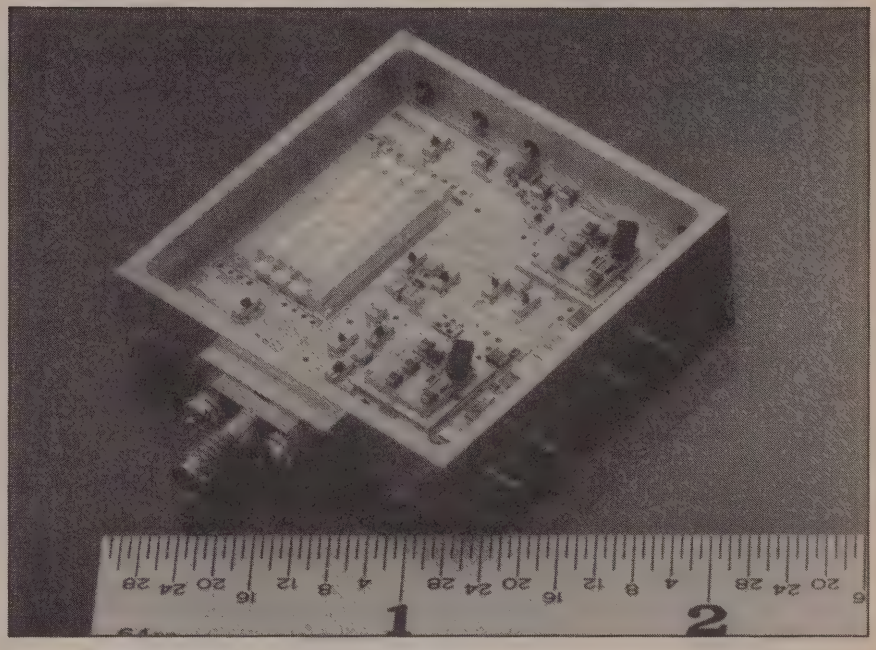
High Performance SAW Devices

Raytheon Company, a leader in advanced electronics and systems for military, space and commercial markets, offers a full line of high quality Standing Acoustic Wave (SAW) Devices to meet your high performance system needs. Years of pioneering leadership in system integration, device, and manufacturing technology development make Raytheon the premier source for your high performance, high volume applications. We offer a complete range of SAW devices including mil-spec, high-rel delay lines, filters, coded devices, and oscillators. We offer turnkey service - from design through Total Quality manufacturing and test. Let us put our strength on your most challenging SAW applications.

High Performance SAW Solutions from the Total Quality Source

Come to Raytheon for your commercial or military radar, data communications and wireless system applications. We can supply devices alone or complete assemblies such as SAW-stabilized oscillators, switchable filter banks, unity gain bandpass filters and pulse expansion and compression systems. Our SAW devices can be used as narrow, wideband and differential delay lines, resonators, tapped and dispersive delay lines, correlators and oscillators. E-Beam photolithography, ion-beam milling, Reactive Ion Etching, sputter deposition of multilayer substrates, laser probe measurement and laser trimming processes yield high performance devices that require no final tuning.



Raytheon AQP (All-Quartz Package) Hybrid SAW Provides Excellent Long Term Frequency Stability (<1 ppm/year)

Tens of thousands of Raytheon SAW devices have been delivered to customers.

High Performance SAW Oscillator

Our All-Quartz Package (AQP) technique provides a compact, hermetic package compatible with hybrid assemblies. Special mounting provides low vibration sensitivity. Raytheon SAWs are extremely stable over time. Typical performance of our low phase noise, frequency stable SAW oscillators:

Output Frequency	354 Mhz
Initial set-on frequency accuracy	<±2 ppm
Long term frequency stability	<1 ppm/year
Phase Noise (SSB) @ 100 Hz offset	<-110dBc/Hz
Noise Floor	<-170dBc/Hz
Vibration Sensitivity	$<1x10^{-9}$/g
Output Power	16 dBm
Harmonics	<-40 dBc
Spurious	<-100 dBc
Size	1.5"x1.5"x0.6"

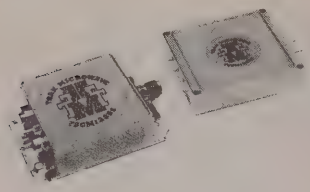
TRAK® MICROWAVE

Crystal Controlled Oscillators

60 MHz–18 GHz Miniature Crystal Controlled Oscillators and Oscillator/Multipliers



ELECTRICAL SPECIFICATIONS (general)
Frequency set accuracy at room temperature: ±0.001%
Frequency stability: ±0.003%
Aging rate: ±0.0005% per year
Power variation with temperature: ±2 dB

Power supply: +15 VDC (other voltages optional)
Load VSWR: 1.5:1 maximum
Temperature Range: -55 to +85°C. (to +125°C with degradation)
Contact factory for other frequencies and/or power levels. (A 1 watt output series is available.)

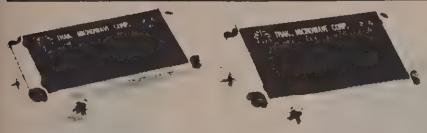
Frequency Multipliers

Specifications subject to change without notice.



These drop-in multipliers demonstrate our capability in miniature frequency multipliers. They incorporate both lumped element filter techniques and new processes for miniaturizing combline filters.

	#1	#2	#3
Output Frequency	480 MHz	960 MHz	11 GHz
Multiplication Factor	X4	X2	X11
Size (nominal)	1.6 x 0.8 x 0.4 in. (41 x 20 x 10 mm)	1.6 x 0.8 x 0.4 in. (41 x 20 x 10 mm)	2.1 x 0.7 x 0.4 in. (53 x 18 x 10 mm)
Input Power (nom.)	+10 dBm	+10 dBm	+10 dBm
Output Power (nom.)	+5 dBm	+5 dBm	+7 dBm
Harmonics/Spurs (all three models)	-91 dBc ..... from 10 to 250 MHz -65 dBc ..... above 250 MHz		

X5 or X6 Active Multipliers

These are examples of a new family of multiplier/amplifier chains utilizing TRAK's thin-film construction techniques for high performance and high reliability in a rugged, compact package. Hi-Rel versions for space application are available.

Typical Specifications

Electrical Specifications
Multiplication Factor .. X5 or X6
Input Frequency Range ..... 500 to 700 MHz, typical
Output Bandwidth ... 6%, typical
RF Power Input ..... −6 dBm to +6.8 dBm
Power Output ..... +13 dBm, minimum, S band
Harmonics and Spurious ..... −65 dBc, maximum
Power Supply ..... +15 VDC at 140 mA, nominal

Environmental Conditions
Operating Temperature Range ..... −54 to +85°C

Mechanical Specifications
Size ..... 2.93 X .84 X .35 inches (75 X 21 X 9 mm) nominal, excluding projections
Weight ..... 1.3 ounces (36 grams)
RF Connectors ..... SMA, female (removable)

Comb Multiplier 100 MHz

This comb multiplier represents our latest size reduction for this type of product. Just fasten it down, solder the tab to your circuit, inject the 100 MHz signal and you have combs from 100 MHz to 18 GHz.

Guaranteed Specifications

Electrical Specifications
Input ..... 100 MHz @ 500 mW
Output ..... 0.100-18 GHz, −40 dBm, minimum
Input VSWR 2.0:1
Spurious ..... −40 dBc

Environmental Conditions
Operating Temperature Range ..... −54 to +85°C

Mechanical Specifications
Size ..... .85 X .63 X .22 inches (22 X 16 X 6 mm) excluding projections
Weight ..... .32 ounces (9.0 grams)

Surface Mount Multiplier

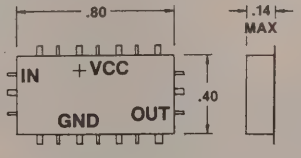
This hermetically sealed surface mount frequency multiplier is an example of TRAK's continuing progress in shrinking RF and microwave components. The unit provides gain and is filtered to assure harmonics are at least 50 dB below the carrier. This packaging technique is available from TRAK for both active and passive multipliers with outputs through 5.2 GHz. Various multiplication factors, bandwidths, gain, and filtering trade-offs can be selected.

Typical Specifications

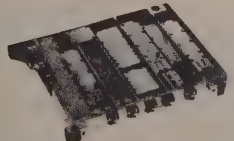
Model Number 3890-1100
Multiplication Factor .. 4
Input Frequency ..... 320 ±5 MHz
Input Power ..... +11 dBm ±2 dB
Output Frequency ... 1280 ±20 MHz
Output Power..... +13 dBm ±2 dB
Spurious/Harmonics .. >50 dBc
Input/Output VSWR .. 2.0:1 max
DC Power +12 VDC at 75 mA max

Environmental Conditions

Operating Temperature ..... -54 to +85ºC
Vibration ..... 20 g, 20-2000 Hz
Shock ..... 100 g, 11 ms
Altitude ..... 70,000 feet



Switched Multiplier



This is an example of a custom-designed frequency multiplier assembly used in a space application. It includes switchable multipliers and uses microstrip circuitry for ruggedness. Special packaging techniques have been used to reduce its overall volume and weight.

Typical Specifications

Input Frequency ..... S Band
Input Power ..... −8 to +10 dBm, typical
Multiplication Factors . x2, x4, x6 and x8
Output Power ..... +13 dBm, typical
Bandwidth ..... 2%, typical (wider bandwidths optional. Contact factory regarding trade offs.)
Harmonics ..... −40 dBc
Spurious ..... −60 dBc
Power Supply ..... +15 VDC at 885 mA, typical
Operating Temperature Range ..... −20 to +77°C
Size ..... 8.5 X 7.0 X .63 inches (216 X 178 X 16 mm) nominal excluding projections
Weight ..... 32 ounces (907 grams), typical
RF Connectors ..... SMA, female, 90 degree sweep angle connector

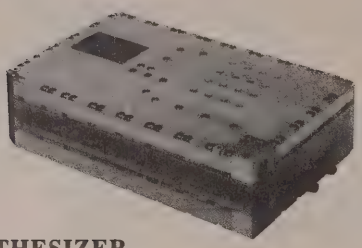
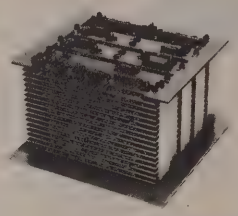
TRAK MICROWAVE



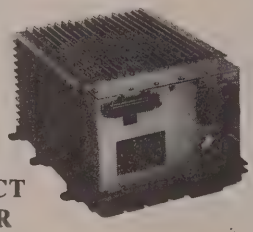
WIDEBAND INDIRECT SYNTHESIZER

Frequency ..... Ku-Band, Octave BW
Step Size ..... 5 MHz Frequency Accuracy ..... 2 PPM
Switching Speed ..... 150 µsec, typical
VSWR ..... 1.5:1 Power ..... +5 dBm ±2 dB
Spurious ..... -60 dBc Harmonics ..... -15 dBc
Phase Noise:
10 KHz ..... -70 dBc/Hz 1 MHz -120 dBc/Hz
100 KHz ..... -75 dBc/Hz 10 MHz -140 dBc/Hz
Reference Output ..... 100 MHz, ±2 dBm, typical
Power Dissipation ..... 35 W
Size ..... 8 x 5 x 2 in. Weight ... 4.8 lbs, max.



HIGH-RESOLUTION INDIRECT SYNTHESIZER

Frequency ..... 1.6 - 2.8 GHz
Step Size ..... 100 Hz
Frequency Accuracy ..... Function of External Reference
Switching Speed ..... 350 µsec, typical
VSWR ..... 1.7:1 Power ..... +5 dBm, nominal
Spurious ..... -68 dBc Harmonics ..... -45 dBc
Phase Noise:
10 KHz ..... -98 dBc/Hz 1 MHz -134 dBc/Hz
100 KHz ..... -105 dBc/Hz 10 MHz -150 dBc/Hz
Power Dissipation ..... 31.25 W
Size .. 7.5 x 7.25 x 5.25 in. Weight ... 13 lbs, max.



MULTI-CHANNEL INDIRECT FREQUENCY SYNTHESIZER

Frequency ..... 5-17 GHz, triple output
Step Size ..... 2.5 MHz Frequency Accuracy ..... 2 PPM
Switching Speed ..... 500 µsec, typical
VSWR ..... 2:1 Power ..... +2 dBm ±2 dB
Spurious ..... -70 dBc Harmonics ..... -15 dBc
Phase Noise:
10 KHz ..... -75 dBc/Hz 1 MHz ..... -120 dBc/Hz
100 KHz ..... -90 dBc/Hz 10 MHz ... -140 dBc/Hz
Reference Output ..... 100 MHz, +2 dBm, typical
Power Dissipation ..... 43 W
Size .. 7.7 x 6.8 x 4.7 in. Weight ... 9 lbs, max.

TRAK Microwave Synthesizer

Frequency ..... 7.9-8.4 GHz
Step Size ..... 10 MHz Frequency Accuracy ..... ± 1 ppm
Switching Speed ..... 20 µsec to phase coherency
VSWR ..... 1.5 : 1 Power ..... +16 dBm minimum
Spurious ..... -60 dBc Harmonics ..... -40 dBc
Phase Noise, Synthesizer:
1 kHz ..... -95 dBc/Hz 10 kHz ..... -100 dBc/Hz
Phase Coherent Ref. Outputs ... 20 MHz, 60 MHz, 1080 MHz
Phase Noise, 1080 MHz Reference:
1 kHz ..... -120 dBc/Hz 10 kHz ..... -125 dBc/Hz
Power Dissipation ..... 20 W
Size ..... 7 x 5.4 x 3 in. Weight ..... 3.5 lbs. max.

* Specify center frequency when ordering. Model designation will be completed by TRAK.
**These units are normally available from stock or from our distributors.

NOTES: (1) Upper frequency limit cannot exceed 18 GHz. (2) If your lower frequency limit is below the lower limit stated for a particular model, select the preceding model. If your upper frequency limit will exceed 12 GHz, select the next higher frequency model.

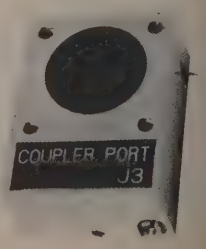
Communications Band Models

Circulator

Frequency ..... 860-900 MHz
Isolation ..... 23 dB min.
Insertion Loss ..... .35 dB max.
VSWR ..... 1.25:1 All Ports
Power Rating ..... 65 watts avg.
Temp. Operating ..... 0° to +70°C
Size ..... 0.96 diameter x .25" high

High Power Isolator

Frequency ..... 865-900 MHz
Isolation ..... 25 dB min.
Insertion Loss ..... 0.25 dB max., 0.2 dB typ.
VSWR ..... 1.20:1 max.
Power Rating ..... 50 watts
Temperature ..... 0° to +50°C
Size (inches) ..... 1.82 x 1.32 x .66
Coupler on terminated port provides reverse power monitor signal.



Specifications subject to change without notice.

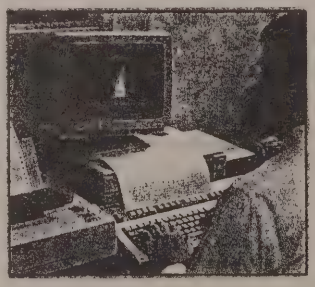
When SMT circuit designs demand, high reliability, more stability, smaller sizes and higher wattages at a competitive price... call KOA now!

KOA Speer has state-of-the-art SMT components to meet stringent applications. When your circuit designs require resistive components with high reliability, more stability, smaller sizes and higher wattages with proven performance, KOA has the answer.

The latest techniques in SPC (statistical process control) and TQC (total quality control) are used to insure consistent high quality SMT products.

Certified product programs, in-house testing, Engineering and R&D programs at KOA are consistently improving product designs and performance. For instance, KOA has recently upgraded wattages on SMT chip resistors. Engineering support is available.



KOA offers a full line of Flat Chip Resistors, Chip Inductors, Tantalum Chip Capacitors, MELF Resistors, Resistor Trimmers and SOM Resistor Networks, available at competitive prices.

Call today for information and free catalog.

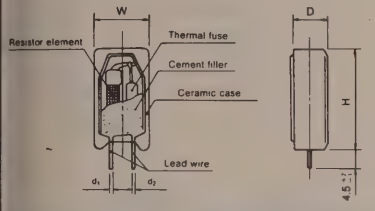
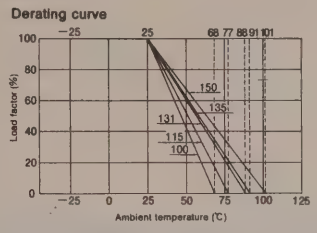
THERMAL FUSE INCORPORATED CEMENT RESISTORS

- **MEG**
- **MES**
- **MER**

Since thermal fuses are incorporated, cement resistors respond quickly to overloading as well as external overheating.

These resistors also provide outstanding features against surges. Therefore they are suitable for the prevention of inrush current for switching regulators.





Type	Dimensions (mm) W	D	H	d_1	d_2	Temperature range of each element MEG	MES	MER

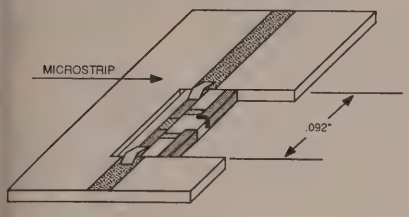
THICK FILM MICROWAVE COMPONENTS
CHIP ATTENUATORS



01 — STANDARD FEATURES INCLUDE:

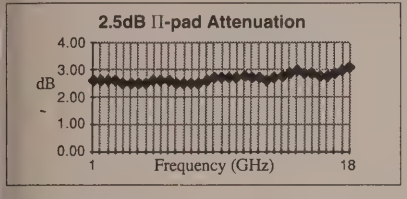
- Chip construction designed for MIC assembly
- Ground plane metalization suitable for soldering or epoxying
- Wire or ribbon bondable gold top conductor lines
- Size: Length .092"
  Width <.045"
  Thickness .010"

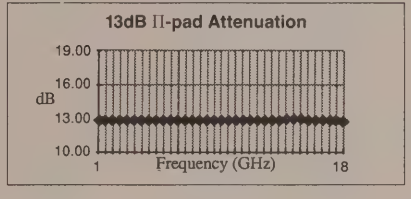
ORDERING INSTRUCTIONS FOR Π-PADS:

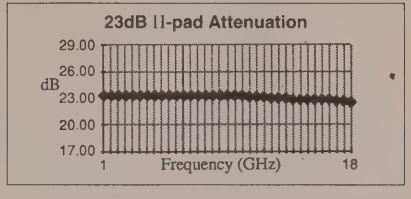
Amitron Part Number = AMP-XX.XdB-01
AMP = Amitron Π-pad
XX.X = Desired Attenuation
01 = Standard Features

ATTENUATOR PERFORMANCE

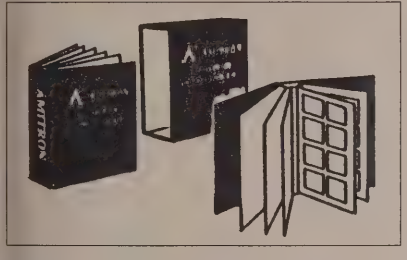
AMITRON has manufactured Π-pads up to 45 dB.
High power balanced attenuators, 4 watts average handling power capability available.





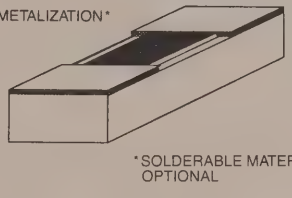


CHIP RESISTOR KITS



AMITRON Engineering Chip Resistor Kits provide a variety of resistor values allowing engineers the flexibility to more readily develop new designs or modify existing circuits. Standard Kits include resistors with 30 different values ranging from 1 ohm to 820K ohms, 20 resistors per value packaged in separate containers. Resistor sizes = .020" width × .040" length × .015" thick with gold metalization pads for aluminum gold wire bonding.

STANDARD KIT RESISTOR STYLE



*SOLDERABLE MATERIAL OPTIONAL

RESISTOR SPECIFICATIONS:

Resistance Values (ohms): Tolerance ±5%

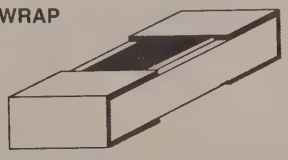
1	10	100	1.0K	10K	100K
1.8	18	180	1.8K	18K	180K
3.3	33	330	3.3K	33K	330K
4.7	47	470	4.7K	47K	470K
8.2	82	820	8.2K	82K	820K

Temperature Coefficient of Resistance (TCR) ±200 PPM from −55°C to −125°C.
Power Rating 50 milliwatts (without heat sinking).

OPTIONS:

- Additional Values to megohm range at $50 per package of 20 after purchase of initial kit
- Solder Tinning
- Dual Wrap or Single Wrap Chip Resistor Styles:

DUAL WRAP



SINGLE WRAP

The above configurations are only a sample of resistor sizes available. Please call for additional part numbers to meet your design requirements. As with the above standard chips (AR1000, 2000, 3000), AMITRON will supply special configurations, such as the AR4000 series (partial wraps), upon request.

Thick Film Chip Resistors CR05/CR10/CR21/CR32 Series

AVX CORPORATION
A KYOCERA GROUP COMPANY

Part Numbering System:

CR	32	101	J	T

Style
CR –Chip
CJ = Zero Ohm

Case Size
05 = 0402
10 = 0603
21 = 0805
32 = 1206

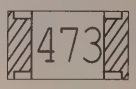
Resistance Code
For G, J, K Tol.
3 digit code (E–24)
2 sig. digits plus no. of zeros.
Examples:
2.2Ω = 2R2
10Ω = 100
100Ω = 101
1KΩ = 102

For F Tol. only
4 digit code (E–96)
3 sig. digits plus no. of zeros
Examples:
10Ω = 10R0
100Ω = 1000
1KΩ = 1001

Resistance Tolerance
K = ±10%
J = ±5%
G = ±2%
F = ± 1% (Available in case size CR21 and CR32 only)

Packaging
B = Bulk
S = 13"Reel Punched Paper Tape (10K pcs/reel)
SE = 13" Reel Embossed Plastic Tape (10K pcs/reel)
T = 7" Reel Punched Paper Tape (5K pcs/reel)
UE = 7" Reel Embossed Plastic Tape (4K pcs/reel)
Z = 13" Reel Punched Paper Tape (50K pcs/reel–CR05 only)

Marking



3 digit indication
Ex. 47 X 103 = 47000 = 47k

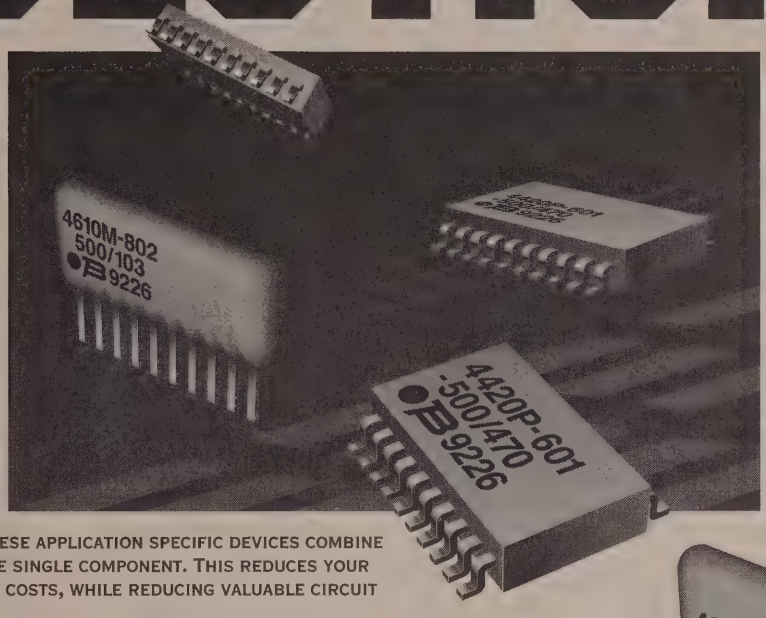
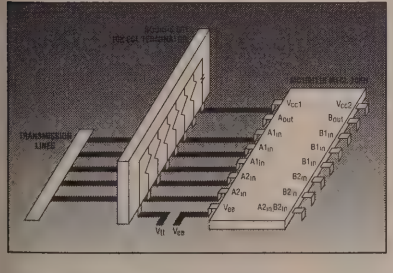
APPLICATION SPECIFIC

RESISTOR NETWORK

SOLUTIONS



THROUGH ADVANCED PACKAGING AND CIRCUIT TECHNOLOGY, BOURNS OFFERS A WIDE ASSORTMENT OF RESISTOR NETWORK AND RESISTOR/CAPACITOR NETWORK PACKAGES FOR SPECIFIC DESIGN REQUIREMENTS. THESE APPLICATION SPECIFIC DEVICES COMBINE MULTIPLE FUNCTIONS IN ONE SINGLE COMPONENT. THIS REDUCES YOUR ASSEMBLY AND COMPONENT COSTS, WHILE REDUCING VALUABLE CIRCUIT BOARD SPACE.



Typical ECL Application
The 800 Series provides decoupling capacitors, reduces board component count, optimizes data transmission, and minimizes overshoot, undershoot and ringing. The 801 RC network is used with 10K ECL design. The 801 can terminate up to 6 transmission lines and provide a 0.01uF capacitor to reduce cross talk and feedthrough effects.

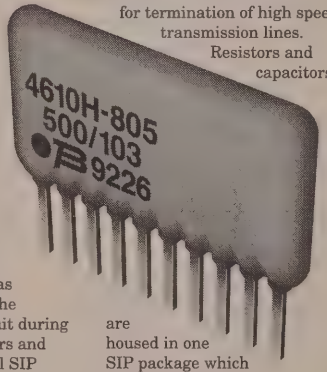
EMI/RFI Filter Solutions
Designed specifically for PC, data terminal, test equipment and process controller applications, these resistor networks are available in wide body SMT and molded DIP packages. These low-pass filters are ideal for installation between I/O drivers and RS 232 connectors.

RC Termination Solutions
This series is designed to eliminate transmission line effects, such as signal reflections and ringing which influence high speed CMOS. The networks capacitor blocks DC currents while acting as a short circuit during signal transitions, reducing power consumption. Combining resistors and capacitors in one package saves board space. High profile conformal SIP design is available in 4 to 18 pin counts.

SCSI Interface Solutions
These resistor networks provide the terminating resistors for SCSI implementation. They optimize transmission by eliminating overshoot and ringing. Bourns provides an assortment of package configurations to address this solution, including molded DIP and SIP styles, and conformation SIP styles.

When it comes to application specific solutions, there's no equivalent to Bourns.

Emitter Coupled Logic Solutions
Digital systems incorporating ECL or other ultra-high switching speed logic families require signal termination to prevent transmission line effects such as reflections and ringing due to fast transition times. The 800 Series is ideal for termination of high speed transmission lines. Resistors and capacitors are housed in one SIP package which minimizes board space, routing problems and manufacturing cost per installed resistive function.



Data Package
For more information on how Bourns can provide solutions to your application specific needs, send for a complete data package today which includes application notes, recommended circuits and complete product specifications.

THICK FILM RESISTOR NETWORKS

General Specifications

The following specifications apply to all Bourns standard networks (Series 4100, 4300, 4400, 4600 and 4800).

Environmental Specifications

Tests per MIL-R-83401 . . . ΔR Maximum
Short Time Overload (STOL) . . ±0.25%
Load Life . . . ±1.00%
Thermal Shock . . . ±0.25%*
Power Conditioning . . . ±0.50%*
Mechanical Shock . . . ±0.25%
Moisture Resistance . . . ±0.50%
Resistance to Solder Heat . . . ±0.25%
Terminal Strength . . . ±0.25%
Vibration . . . ±0.25%
Low Temperature Storage . . . ±0.25%
High Temperature Exposure . . . ±0.50%
Low Temperature Operation . . . ±0.25%
Operating Temperature . . . −55 to +125°C
Storage Temperature . . −65 to +150°C

*Thermal Shock and Power Conditioning Combined . . . ±0.7% maximum

Mechanical Specifications

Flammability . . . Conforms to UL94V-0
Leadframe . . . Copper (Olin 194) Tin/lead Finish
Body Material
Molded Product . . . Epoxy/Novolac
Conformal Product . . . Epoxy/Anhydride
Lead Solderability and Solvent Resistance . . . Meet requirements of MIL-R-83401

Electrical Specifications

Standard Resistance Range . . . 10 ohms to 10 megohms
Resistance Tolerance (Bussed and Isolated Circuits)
±2.0% . . . 50 ohms to 5 megohms*
±1 ohm . . . 10 ohms to 49 ohms
Dual Terminator
±2.0% . . . 100 ohms to 5 megohms*
±2 ohms . . . 10 ohms to 99 ohms
Maximum Operating Voltage
Through-Hole Components . . . 100V
SMD Components . . . 50V
Temperature Coefficient (TCR)
±100PPM/°C 50 ohms to 2.2 megohms
±250PPM/°C Below 50 ohms and above 2.2 megohms
TCR Tracking . . . 50PPM/°C maximum Equal value resistors
Insulation Resistance (@100V) . . . 10,000 megohms minimum
Dielectric Withstanding Voltage 200VRMS . . . 1Ma maximum leakage current
*Above 5 megohms = ±5.0%

STANDARD RESISTANCE VALUES
(003, 104 Circuits)

Resistance			
Ohms		Code	
R_1	R_2	R_1	R_2

High	.350	(8.89)

Conformal SIP

The Conformal SIP product is a lower cost alternative to the molded product and is suitable for use where manual insertion is employed. This product is available in all pin counts from 4 through 14 pins, in low profile (.200" high), medium profile (.250" high) and high profile (.350" high) packages.

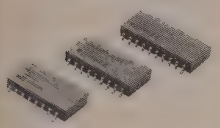
THICK FILM RESISTOR NETWORKS

Medium Body SMD

(4800 Series)



The SOM package is a surface-mount device (SMD) available in 14, 16, 18 and 20 pin versions. The Model 48XXP is designed per the EIA SOGN-0002 standard with gull wing leads, the most popular package style in the industry.

ISOLATED RESISTORS
001 circuit)

4818 . . . . . 1.44W
4820 . . . . . 1.60W

Wide Body SMD

(4400 Series)

The SOL package is a surface-mount device (SMD) available in 16 and 20 pin configurations. These devices are available in the standard JEDEC MS-013 SOL (.300 wide) package with gull wing leads (Model 44XXP) and are also available with J-Hook leads (Model 44XXJ) for use where mounting area is restricted. The J-Lead version of the SOL package mounts on the same land pattern as the EIA SOM (.220 wide) medium body package.

Military Qualified Networks

GENERAL SPECIFICATIONS

These specifications are applicable to all Military Qualified Networks.

	Characteristic K	Characteristic M
Electrical Specifications		
Temperature Coefficient of Resistance (TCR)	±100ppm	±300ppm
Maximum Ambient Temperature @ Rated Power	70°C	70°C
Maximum Ambient Temperature @ Zero Power	125°C	125°C
Resistance Tolerance	F = ±1%	F = ±1%
Resistance Range 51 ohm - 1 meg only	G = ±2%	G = ±2% J = ±5%
Environmental Specifications	**K**	**M**
Thermal Shock ΔR Plus Power Conditioning ΔR	±0.7%	±0.7%
Low Temperature Operation ΔR	±0.25%	±0.5%
Short Time Overload ΔR	±0.25%	±0.5%
Terminal Strength ΔR	±0.25%	±0.25%
Resistance to Soldering Heat - ΔR	±0.25%	±0.25%
Moisture Resistance ΔR	±0.5%	±0.5%
Shock ΔR	±0.25%	±0.25%
Vibration - High Frequency ΔR	±0.25%	±0.25%
Life ΔR	±0.5%	±2.0%
High Temperature Exposure ΔR	±0.5%	±1.0%
Low Temperature Storage ΔR	±0.25%	±0.5%
Insulation Resistance	10,000 MegΩ	10,000 MegΩ

Mechanical Specifications
Flammability . . . . . Conforms to UL94V-0
Lead Frame Material . . . . . Copper (OLIN 194) tin/lead finish
Body Material . . . . . Epoxy resin/Novolac

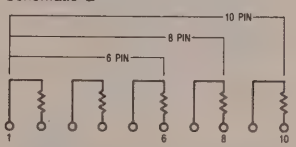
MILITARY SIP NETWORKS M83401 SERIES

MILITARY QUALIFIED MOLDED SIPs

Low Profile (M83401-07, 08, 09)
High Profile (M83401-04, 05, 06)

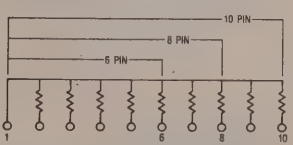
These SIP Resistor Networks are qualified in accordance with MIL-R-83401 and are available in bussed and isolated electrical configurations in pin counts of 6, 8 and 10 pins, with both low and high profile packages available.

ISOLATED RESISTORS
Schematic G



These models incorporate 3, 4 or 5 isolated thick-film resistors of equal value, each connected between two pins.

BUSSED RESISTORS
Schematic C



These models incorporate 5, 7 or 9 thick-film resistors of equal value, each connected between a common bus (pin 1) and a separate pin.

MILITARY DIP NETWORKS M83401 SERIES

MILITARY QUALIFIED MOLDED DIPs

14-Pin (M83401-01)
16-Pin (M83401-02)

These Molded DIP Resistor Networks are qualified in accordance with MIL-R-83401 and are available in bussed and isolated electrical configurations in 14 and 16 pin packages.

ISOLATED RESISTORS

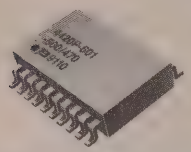
APPLICATION SPECIFIC RESISTOR NETWORKS



EMI/RFI Filters
Low Pass Wide Body SMT and Molded DIP Packages

- Reduce the emission of EMI/RFI noise by filtering out the high-frequency content of digital signals at the board level.
- Replace expensive and bulky inductive devices typically used to suppress EMI/RFI
- Minimize space and routing problems, and reduce manufacturing cost per installed resistive and capacitive function
- Increase board yields and reliability by reducing component count

Electrical Specifications – Resistors
Standard Resistance Range*
.....10 ohms to 100 ohms
Series Resistance Tolerance .....±10%
Temperature Coefficient of Resistance
.....±300ppm/°C
Operating Voltage
.....50 volts maximum
Operating Temperatures
.....+10°C to +85°C
*Other Resistance Values Available, 10 ohms – 1 megohm

Electrical Specifications – Capacitors
Standard Capacitance Range
.....50pF to 200pF
Capacitance Tolerance.....+30%
Temperature Characteristic....±Z5U
Operating Temperatures
.....+10°C to +85°C
Voltage Rating .....25 volts
Dielectric Withstand Voltage
.....2.5 x rated voltage
Insulation Resistance
.....10,000 megohms minimum

Environmental Specifications – Resistors
TESTS PER MIL-R-83401 ..ΔR MAXIMUM
Thermal Shock .....±0.25%
Mechanical Shock.....±0.25%
Moisture Resistance (no power applied)
.....±0.50%
Resistance to Solder Heat ...±0.25%
Terminal Strength .....±0.25%
Vibration.....±0.25%

Mechanical Specifications
Flammability .....Conforms to UL94V-0
Leadframe
...Copper (Olin 194) – 60/40 solder dipped
Body Material .....Epoxy/Novolac
Lead Solderability and Solvent Resistance
.....Meet requirements of MIL-R-83401

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

High Performance Film Resistors

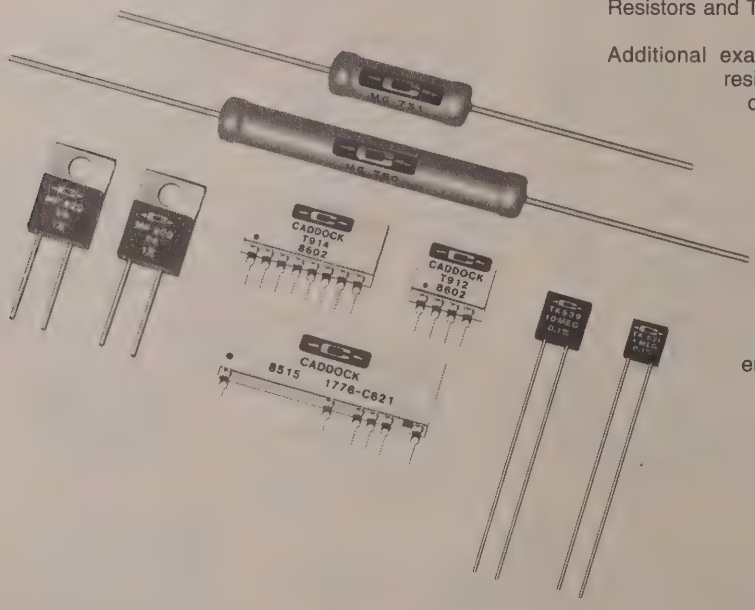
The Caddock Electronics General Catalog describes over 200 in-production models of precision discrete resistors and resistor networks that utilize Caddock's high stability, extended life Micronox® and Tetrinox® resistance films. With over 30 years of experience and an exceptional record of in-circuit performance and reliability, Caddock Electronics continues to lead the industry in the development, production and on-time delivery of high performance film resistors.

Caddock's Advanced Resistor Technology Provides Many Exceptional Performance Advantages:

Caddock's advanced resistor technology began in 1962 with the introduction of Micronox® harsh environment, high power and high voltage resistors. The Caddock technology was further extended in 1975 with the development of the Tetrinox® resistance system that made possible the introduction of low TC, ultra-stable resistors and resistor networks.

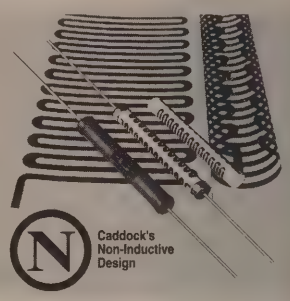
These technological advances have provided the electronics industry with a selection of precision resistor types that provide many high performance advantages.

- **Precision** - Tolerances as close as 0.01%.
- **Long-Term Stability** - Better than 0.005% per 1,000 hours of operation under full load operating conditions.
- **Higher Power Ratings** - Up to five times higher than other resistor technologies.
- **High Operating Temperatures** - Up to +275°C.
- **Ultra-Low Temperature Coefficients** - Standard to less than 10 ppm/°C and custom values as low as 2 ppm/°C.
- **Non-Inductive Design -** Available in resistance values from as low as 0.05 ohm to as high as 10,000 Megohms.



Non-inductive Performance along with Caddock's Patented Design which Enhances High Stability in Both High-Power and High-Voltage Resistor Applications.

For wide-band, high frequency applications, the advantages of Caddock's Non-Inductive Serpentine Pattern are available in most models of Micronox® resistors. This special sepentine pattern provides for neighboring lines to carry currents in opposite directions thereby achieving maximum cancellation of flux fields over the entire length of the resistor.



The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

The High-Performance Capabilities of Caddock Film Resistors Can Provide Improved Accuracy and Stability to Precision Circuitry:

Because of the special advantages of Caddock's resistance film technology, Caddock High Performance Film Resistors are often specified in the precision circuits that ultimately establish the overall accuracy and stability of the equipment.

Examples of such applications include many types of precision high-voltage supplies and voltage references that have achieved improved accuracy and extended-life stability through the use of Caddock Type MG Precision High-Voltage Resistors and Type T912 Precision Resistor Networks.

Additional examples of the application of this advanced resistor technology include the industry-wide use of Caddock Type 1776 and Type 1787 Precision Decade Divider Resistors in the signal input circuits of laboratory and bench-type digital voltage and current measuring instruments.

An introduction and index to these Caddock resistor technologies is provided on the next page. Additional information and technical assistance is also available directly from our application engineering team.

We welcome your call.

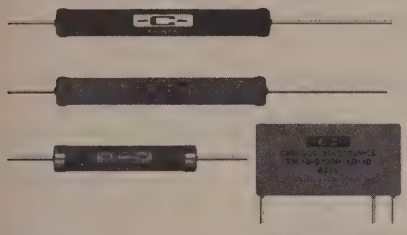
HIGH PERFORMANCE FILM RESISTORS

Precision High Voltage Resistors and High Voltage Divider Networks



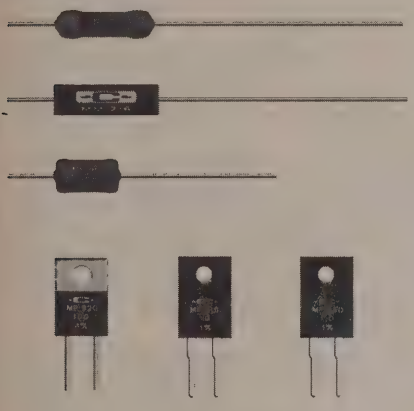
Type TG Low TC Precision High Voltage Resistors
Temperature Coefficient of 25 ppm/°C from -55°C to +125°C — Page C4

Type MG Precision High Voltage Resistors with Extended Resistance Range
Resistance Values to 10,000 Megohms, TC of 80 ppm/°C — Pages C5 and C6

Type MX Lab Grade Precision High Voltage Resistors
High Voltage Resistors for Laboratory and Industrial Applications — Page C7

Type THV Precision High Voltage Divider Networks
Ratio Temperature Coefficients to 10 ppm/°C from -55°C to +125°C,
Ratio Tolerances to 0.25% at 10 KVDC, 15 KVDC or 20 KVDC — Page C8

Power Film and Precision Film Resistors



Type MS and MR Power Film Resistors
Operating Temperature to +275°C, Power Ratings to 15 Watts,
Non-Inductive Design — Pages C9 and C10

Type MM and ML Precision Film Resistors
High Temperature Resistors for Geophysical, Aerospace
and Industrial Requirements — Page C11

Type MV Low Resistance Power Film Resistors ***NEW RESISTANCE RANGE***
Values from 0.1 ohm to 50 ohms, Power Ratings to 10 Watts,
Operating Temperature to +275°C and Non-Inductive Design — Page C12

Type MP 820 and MP 821 Kool-Tab® Power Film Resistors ***NEW 0.05Ω TO 10KΩ***
Non-Inductive 20 Watt Power Resistor in the TO-220 Power Package
with Metal Mounting Tab — Page C14

Type MP 800 Series Kool Pak™ Power Film Resistors ***NEW TO-126 Style***
Non-Inductive, 8 Watts, Model MP 808, TO-126 Style
Non-Inductive, 16 Watts, Model MP 816, TO-220 Style — Page C15 and C16
Both Models Utilizing a High Thermal Conductivity Molding Compound

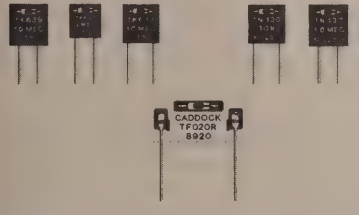
Non-Inductive, 25 Watts, Model MP 825, T0126 Style
Non-Inductive, 50 Watts, Model MP 850, TO-220 Style — Page C15 and C16
Both Models with Integral Copper Heat Sink Flush with Mounting Surface

Power Radial-Lead and Extended Resistance Range Radial-Lead Resistors

Type MK 132 and MK 120 Precision Film Resistors
3/4 and 1/2 Watt Ratings at +125°C, 1 ohm to 5 Megohms — Pages C17 and C18

Type MK 632 and MK 620 Extended Resistance Range Film Resistors
Resistance Range from 2.1 Megohms to 100 Megohms — Pages C17 and C18

Low Temperature Coefficient Precision and Ultra-Precision Film Resistors

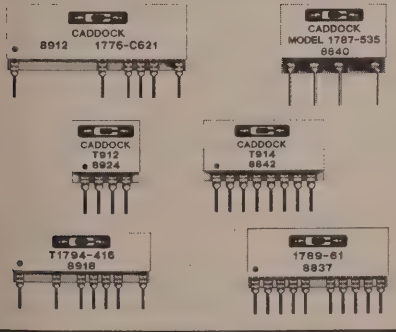


Type TK Low TC Precision Radial-Lead Film Resistors
Resistance Range from 1 Kohm to 10 Megohms, Tolerances to 0.05%,
T.C. of 5, 10 or 20 ppm/°C from -55°C to +125°C — Pages C19 and C20

Type TN Lab Grade Low TC Precision Film Resistors
Tolerances to 0.025%, Resistance Range from 1 Kohm to 1 Megohm,
Temperature Coefficient of 5, 10 or 20 ppm/°C from 0°C to +70°C — Page C21

Type TF Low TC Ultra-Precision Film Resistors
Resistance Range from 1 Kohm to 125 Megohms,
Temperature Coefficients to 5 ppm/°C, Tolerances to 0.01% — Page C22

Precision and Ultra-Precision Standard Resistor Networks and Custom Resistor Networks



Type 1776 Precision Decade Resistor Voltage Dividers
39 Models of Input Voltage Dividers for Digital Multimeters and other
Range-Switching Circuits, Ratio Tol. to 0.02%, Ratio TC to 5ppm/°C — Pages C23 and C24

Type 1787 Precision Current Shunt Resistor Networks
3 and 4-step Current Shunt Resistor Networks for
Current Sensing in Multi-Range Instrumentation — Pages C25 and C26

Type T912 and T914 Precision Resistor Networks
Two Resistor and Four Resistor Networks with Precise Ratio Performance,
Ratio Tolerances to 0.01%, Ratio TC to 2 ppm/°C — Page C27

Custom Precision Resistor Networks
Ratio TC to 5 ppm/°C, Ratio Tolerances to 0.01%,
Resistance Range from 0.5 ohm to 50 Megohms — Page C28

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Caddock process control, quality control and test programs

The outstanding levels of performance and reliability that Caddock resistors provide are maintained through intensive programs for manufacturing and process control, quality assurance testing and reliability verification:

Manufacturing Control

Our manufacturing controls include processes for power conditioning, over-voltage conditioning and maximum temperature conditioning. We also perform many in-process tests to verify the performance levels and consistency of all our resistor types, and to screen out defects which do not meet our high standards.

Quality Control

The Caddock Quality Control System covers every step in the manufacturing process from the examination of incoming raw materials to the final testing and packaging of each resistor product.

To meet the most stringent Q.C. requirements, Caddock's Quality Control Procedures have been approved as being in conformance to MIL-I-45208 in surveys by military and space systems customers.

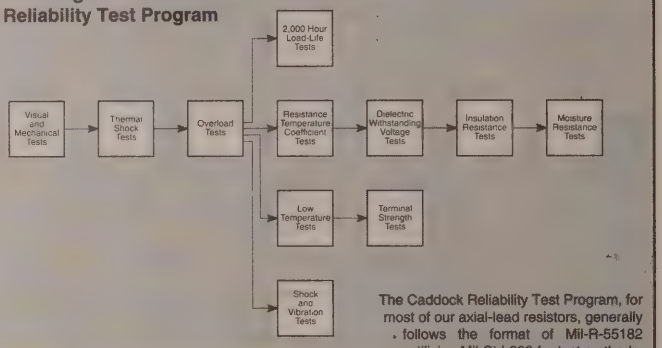
Reliability Verification

In addition to tests for tolerance, stability and temperature characteristics that are a part of our normal manufacturing procedures, we also perform semi-annual reliability tests to confirm compliance to our exacting product specifications.

The flow diagram of the Caddock Reliability Test Program for axial-lead resistors illustrates the sequence of the tests in this program.

Data from the Caddock Reliability Test Program is available to assist designers in qualifying Caddock resistor products for use on high reliability programs.

Flow Diagram of Caddock Reliability Test Program



The Caddock Reliability Test Program, for most of our axial-lead resistors, generally follows the format of Mil-R-55182 utilizing Mil-Std-202 for test methods.

Customer Required Quality Assurance Testing

For our customers whose program requirements for performance, quality and reliability verification include added testing, our specially developed in-house testing capabilities and data acquisition systems give us the ability to perform customer required testing for the most demanding program requirements.

Design Assistance and Assistance in Developing the Resistor Product Specifications

By providing design assistance and technical support at the initiation of a new design and a new Specification Control Drawing (SCD), we have often been able to achieve improvements in both the resistor product performance and cost while fully achieving the program's quality objectives.

For assistance in design and specification development and assistance in the application of our quality assurance testing capabilities to your specific circuit performance and program needs, call or write our Applications Engineers at our Applied Sciences Division in Roseburg, Oregon.

Type TG Low TC Precision High Voltage Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

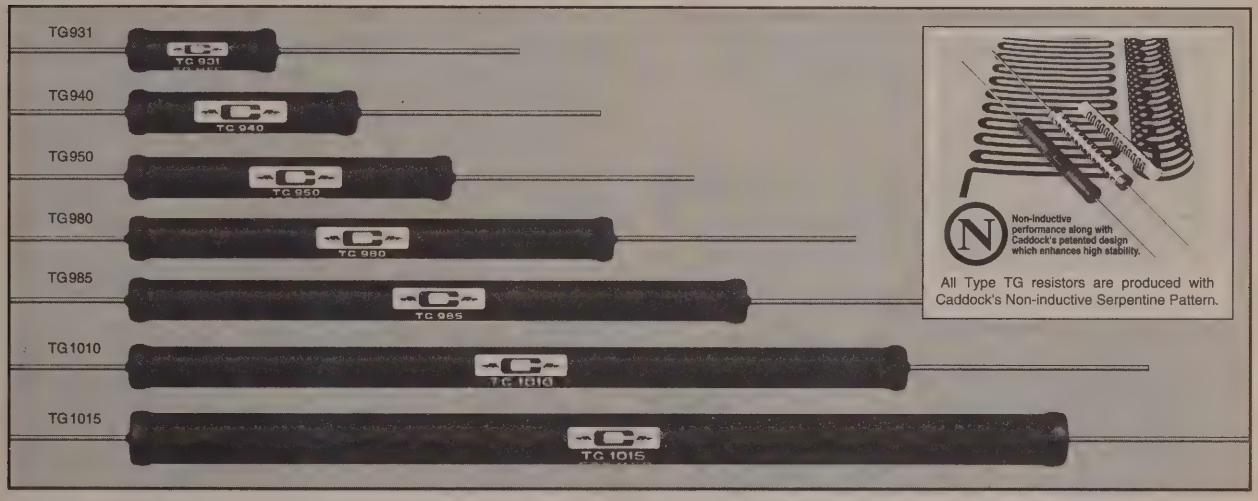
TC of 25 ppm/°C from -55°C to +125°C, Resistance Range from 1 Megohm to 1,000 Megohms

To meet the precision temperature stability requirements of high accuracy, high voltage systems, Caddock introduces the Type TG Low TC Precision High Voltage Resistors. These resistors utilize our proven Tetrinox® resistance system to achieve the unique combination of low temperature coefficient with high stability performance at high operating voltages.

The Type TG Low TC Precision High Voltage Resistors are designed to meet the demanding stability requirements of TWT power supplies, electron microscopes, X-ray systems, high resolution CRT displays and geophysical instruments.

The performance features of the Type TG Low TC Precision High Voltage Resistors are:

- Temperature Coefficient: 25 ppm/°C from -55°C to +125°C.
- Load Life Stability of 0.25% per 1,000 hours at +125°C.
- Resistance Tolerance from ±1.0% to ±0.1%.
- Resistance Range from 1 Megohm to 1,000 Megohms.
- Maximum Continuous Operating Temperature of +225°C.
- The low temperature coefficient minimizes the self-drift due to power dissipation warm-up.



Model No.	Wattage	Max. Continuous Oper. Volt.	Dielect. Strength	TC ppm/°C	Resistance Min.	Resistance Max.	Dimensions in inches and (millimeters) A	B	C
TG931	1.0	4,000	750	25	1 Meg	50 Meg	1.000 ±.060 (25.40 ±1.52)	.315 ±.030 (8.00 ±.76)	.040 ±.002 (1.02 ±.05)

TG950	2.0	10,000	1,000	25	2 Meg	200 Meg	2.125 ±.060 (53.98 ±1.52)	.315 ±.030 (8.00 ±.76)	.040 ±.002 (1.02 ±.05)
TG980	3.0	15,000	1,000	25	3 Meg	300 Meg	3.125 ±.060 (79.38 ±1.52)	.315 ±.030 (8.00 ±.76)	.040 ±.002 (1.02 ±.05)
TG985	4.0	20,000	1,000	25	4 Meg	400 Meg	4.000 ±.120 (101.60 ±3.05)	.315 ±.030 (8.00 ±.76)	.040 ±.002 (1.02 ±.05)
TG1010	5.0	25,000	1,000	25	5 Meg	500 Meg	5.000 ±.120 (127.00 ±3.05)	.315 ±.030 (8.00 ±.76)	.040 ±.002 (1.02 ±.05)
TG1015	6.0	30,000	1,000	25	6 Meg	1,000 Meg	6.000 ±.120 (152.40 ±3.05)	.350 ±.040 (8.89 ±1.02)	.040 ±.002 (1.02 ±.05)

Extended Maximum Continuous Operating Voltage Rating

Maximum continuous operating voltages up to 60% higher than the values listed in the table can be achieved through special factory conditioning, provided the power ratings are not exceeded. To specify maximum continuous operating voltages above the values listed in the table, add a "-15" to the model number (Example: TG950-15). Note that the standard overload and overvoltage ratings do not apply to the "-15" resistors.

Combine Type TG and Type TK Resistors for Low Ratio TC Tracking

The Type TG Low TC Precision High Voltage Resistors can be used in combination with the low Absolute Temperature Coefficient of the Type TK Low TC Precision Radial-Lead Film Resistors (Model TK133 with TC of 5 ppm/°C) to achieve 30 ppm/°C Ratio TC without special matching.

With special matching, a **Ratio TC of 10 ppm/°C** can be achieved.

The low temperature coefficient for both the Type TG and Type TK resistors will also minimize ratio drift due to power dissipation warm-up.

Specifications:

Resistance Tolerance: ±1% (tolerances to 0.1% on special order).

Temperature Coefficient: 25 ppm/°C referenced to 25°C, ΔR taken at -55°C and +125°C.

Insulation Resistance: 10,000 Megohms, min.

Overload/Overvoltage: 5 times rated power with applied voltage not to exceed 1.5 times maximum continuous operating voltage for 5 seconds. ΔR 0.20% max.

Thermal Shock: Mil-Std-202, Method 107, Cond. B, ΔR 0.20% max.

Moisture Resistance: Mil-Std-202, Method 106, ΔR 0.20% max.

Load Life: 1,000 hours at rated power, ΔR 0.25%.

Lead Material: Gold Plated.

Encapsulation: Silicone Conformal.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MG Precision High Voltage Resistors

Now with Extended Resistance Range to 10,000 Megohms and Additional Models

Temperature Coefficient as tight as 80 ppm/°C, Combined with Excellent Long-Term Stability, and Precision Tolerances.

Caddock's Micronox® resistance films are the source of the Type MG Precision High Voltage Resistors' outstanding combination of performance features:

- Single-resistor values as high as 10,000 Megohms.
- Maximum continuous operating voltages as high as 48,000 volts ("-15" Ratings).
- Overvoltage capabilities of 150% of standard working voltages for all models and values.
- Resistance Tolerances from ±1.0% to ±0.1%.
- Temperature Coefficient, for standard resistance range, of 80 ppm/°C in combination with resistance tolerances as tight as ±0.1%.
- Typical extended life stability of 0.02% per 1,000 hours for standard resistance range as demonstrated by reliability testing.

This exceptional performance has been proven through many years of use in equipment that demands the highest reliability and stability, including TWT amplifiers, X-ray systems, geophysical instruments and medical electronics.

Preconditioning for Power and Voltage Ratings

All power ratings and maximum operating voltage ratings are for continuous duty. These ratings are based on pre-stress voltage levels applied during the manufacturing process to provide for stable resistor performance even under momentary overload conditions.

Maximum operating voltages 60% higher than the values listed in the table may be specified by adding "-15" to the model number (Example: MG750-15), provided power ratings are not exceeded. Note that overload and overvoltage ratings do not apply to the "-15" resistors.

Non-Inductive Performance

Most models are manufactured with Caddock's Non-Inductive Design which uses a serpentine resistive pattern that provides for neighboring lines to carry current in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor. This efficient non-inductive construction is accomplished without derating of any performance advantages.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

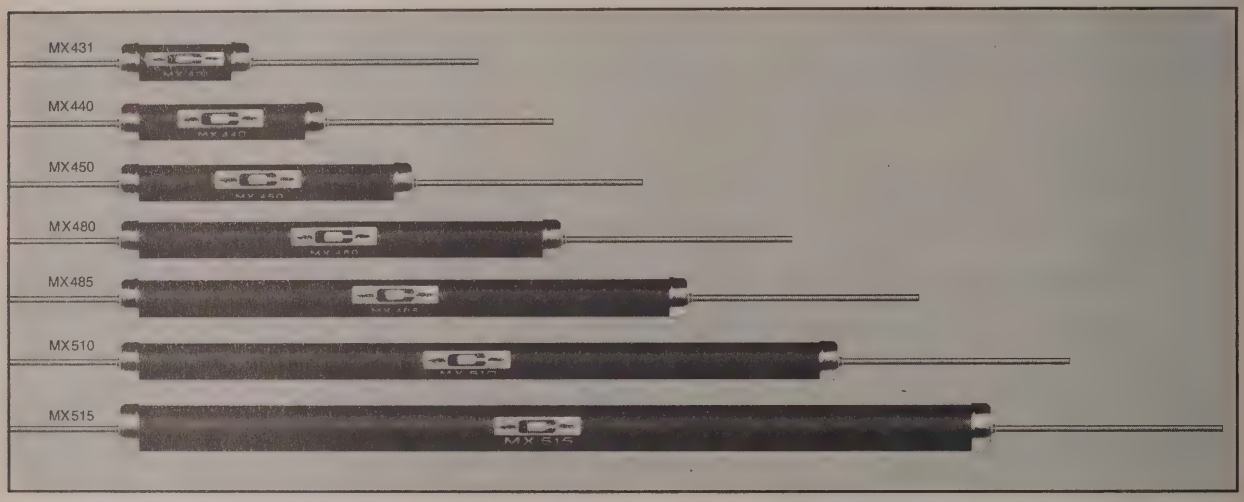
Type MX Lab Grade Precision High Voltage Resistors

High Voltage Resistors for Laboratory and Industrial Applications

The Type MX Lab Grade Precision High Voltage Resistors were specifically developed for use in high performance laboratory and industrial high voltage systems. These resistors combine the proven performance of Caddock's Micronox® resistance system with new cost efficient design elements. These resistors are intended for the design of high voltage systems where the system is not exposed to full military or space grade operating conditions. For full military or space grade operating conditions, we recommend Caddock's **Type TG Low TC Precision High Voltage Resistors** or **Type MG Precision High Voltage Resistors.**

The performance features of the Type MX Lab Grade Precision High Voltage Resistors are:

- Seven Models with Voltage Ratings from 7.5 KV to 48 KV.
- Temperature Coefficient: 80 ppm/°C from 0°C to +70°C.
- Load Life Stability of 0.50% per 1,000 hours.
- Resistance Tolerance from ±0.1% to ±10%.
- Non-Inductive Design.
- Resistance Range from 1 Megohm to 2,000 Megohms.



Model No.	Wattage	Max. Continuous Oper. Volt.	TC ppm/°C	Resistance		Dimensions in inches and (millimeters)		
				Min.	Max.	A	B	C

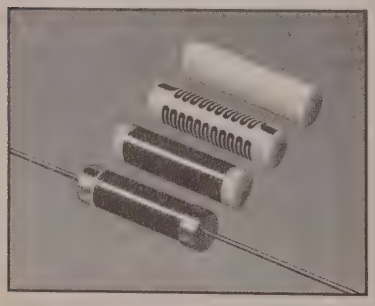
MX515	15.0	48,000	80	6 Meg	2,000 Meg	5.940 ±.080 (150.88 ±2.03)	.330 ±.020 (8.38 ±.51)	.040 ±.002 (1.02 ±.05)

Type MX Resistors Utilize Caddock's Patented Coating Design

Type MX Lab Grade Precision High Voltage Resistors combine Caddock's Non-Inductive serpentine pattern with a patented, high thru-put screen printed silicone coating. The alignment of the gap in the coating pattern with the gap in the serpentine resistor pattern provides a complete encapsulation of the resistor element. The cap and lead assemblies are pressed onto the resistor core, finishing the resistor and providing rugged terminal attachment.



Specifications:

Resistance Tolerance: ±1%, ±2%, ±5% or ±10% (tolerance to ±0.5%, ±0.25% or ±0.1% on special order).

Temperature Coefficient: 80 ppm/°C referenced to 25°C, ΔR taken at 0°C and +70°C.

Thermal Shock: Mil-Std-202, Method 107, Cond. A, ΔR, 0.20% max.

Moisture Resistance: Mil-Std-202, Method 106, ΔR, 0.40% max.

Load Life: 1,000 hours at rated power at 70°C, ΔR, 0.50% max.

Lead Material: Tinned copper clad steel.

Encapsulation: Screen printed silicone coating over resistor element.

Type THV Precision High Voltage Divider Networks

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

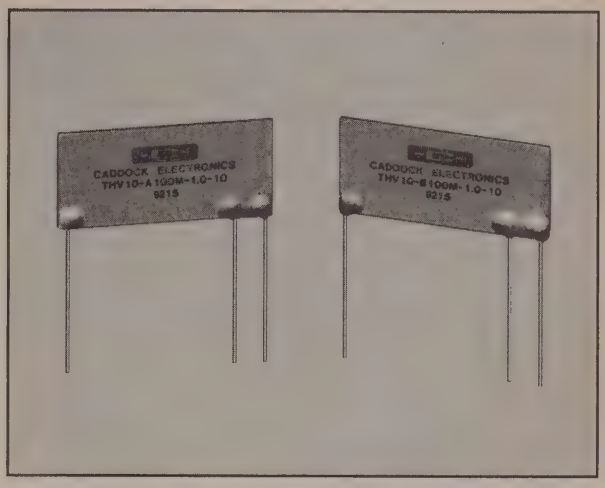
Ratio TC to 10 ppm/°C, Ratio Tolerance to ±0.25%, Voltage Ratings of 10 KV, 15 KV or 20 KVDC

The Type THV Precision High Voltage Divider Networks introduce Caddock's advanced high voltage resistor technology which doubles the allowable working voltage over the length of the high voltage section. This technology combines Caddock's Tetrinox® resistance films with a patented laser-generated V-Notch Geometry which optimizes the voltage gradient over the length of the resistance pattern.

Type THV networks provide tighter ratio temperature coefficients and tighter ratio tolerances than have previously been available in standard high voltage divider products.

- Ratio Temperature Coefficients of 10 ppm/°C or 25 ppm/°C from -55°C to +125°C.
- Ratio Tolerances of ±0.25%, ±0.5%, ±1.0% or ±2.0% at Rated Voltage.
- Voltage Rating of 10 KVDC, 15 KVDC or 20 KVDC at +125°C.
- Standard Voltage Division Ratios of 1,000:1 or 100:1, with custom ratios available.

These specifications can provide important improvements in performance in many types of advanced electronic systems, including TWT power supplies, radar systems, X-ray systems, analytical equipment and high resolution CRT displays.



For complete information on price and delivery of both evaluation and production quantities, contact our Sales Office.

Standard Type THV Precision High Voltage Divider Networks

Model No.	Voltage Rating	Ratio Code Letter	Voltage Division	Resistance			Dimensions inches (mm)

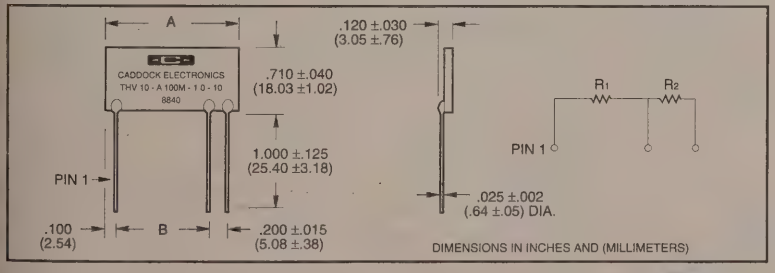
Ordering Information: THV10 - A 100M - 1.0 - 10

- **Model Number:** THV10
- **Ratio Code Letter:** A
- **Total Resistance Value of the Divider:** 100M
- **Ratio Temperature Coefficient from -55°C to +125°C:** -25 = 25 ppm/°C, -10 = 10 ppm/°C
- **Standard Ratio Tolerance at Rated Voltage:** -2.0 = 2.0%, -0.5 = 0.5%, -1.0 = 1.0%, -0.25 = 0.25%



Specifications:

Ratio Tolerance: See ordering information.

Absolute Tolerance: ±1.0% for all resistors.

Ratio Temperature Coefficient: See ordering information.

Absolute Temperature Coefficient: 30 ppm/°C. Referenced to 25°C, ΔR taken at -55°C and +125°C.

Voltage Rating: Rated voltage applied to R1 and R2 in series.

Load Life: Ratio change with rated voltage applied for 1,000 hours at +125°C, 0.4% max.

Overvoltage: 1.5 times rated voltage for 5 seconds, ratio change 0.5% max.

Thermal Shock: Mil-Std-202, Method 107, Cond. C, ratio change 0.25% max.

Moisture Resistance: Mil-Std-202, Method 106, ratio change 0.5% max.

Lead Material: Gold Plated.

Encapsulation: Silicone Conformal with Dielectric Withstanding Voltage of 750 volts.

Insulation Resistance: 10,000 Megohms, min.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MS and MR Power Film Resistors

Power Film Resistor Family with Wide Resistance Range and +275°C Maximum Temperature

With power ratings to 15 watts and voltage ratings as high as 6,000 volts in an axial-lead resistor with values to 30 Megohms, the Type MS Power Film Resistors deliver the performance capabilities that can simplify circuit design and reduce equipment cost and complexity.

Type MS Power Film Resistors provide all these features in a single resistor:

- Full power and voltage ratings, without derating:
  - for non-inductive performance.
  - for high resistance values that extend the critical resistance value up to 10 times.
- Higher voltage ratings without the limitations of minimum wire size and spacing.
- Excellent long-term stability.
  Tests demonstrate typical stability of 0.05% per 1,000 hours over extended life.

Micronox® Resistance Films

Type MS performance begins with Caddock's Micronox® resistance films. Produced exclusively by Caddock Electronics, these proven complex oxide films have been used reliably for over 30 years in Caddock's precision power resistor products.

Micronox® resistance films are fired directly onto a ceramic core at temperatures above 1400°F. These resistance films have demonstrated outstanding stability when exposed to a high ambient temperature, thermal shock and high power densities.

This unique approach to precision power resistors opens new design possibilities by providing a wider resistance range, precise temperature characteristics, and higher temperature and power handling capability.

Non-inductive Performance along with Caddock's Patented Design which Enhances High Stability in High-Power Resistor Applications.

Most models are manufactured with Caddock's Non-Inductive serpentine resistive pattern that provides for neighboring lines to carry current in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor. This efficient non-inductive construction is accomplished without derating of any performance advantages.

The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

Carefully Controlled Manufacturing and Test Procedures Assure Compliance with Strict Quality Control Requirements.

Manufacturing Control

Type MS Resistors are produced under intensive manufacturing controls with processes which include power conditioning, overvoltage conditioning and maximum temperature conditioning.

Quality Control

From the certification and testing of all materials, to the supervision of manufacturing processes, all Caddock Type MS and MR Power Film Resistors are produced under procedures that have been approved for conformance to the requirements of Mil-I-45208 in many recent surveys.

Reliability Verification

Type MS resistors are included in the Caddock Reliability Testing Program. Conformance to specification parameters including Extended Life, Shock, Vibration and Humidity are verified on a periodic basis. Data from Type MS resistors can be compared by similarity to other Caddock resistor types, since Type ML, MM, MS, MP, MG and MK represent an identical combination of materials - aluminum oxide substrate, Micronox® resistance film and silicone insulating coating.

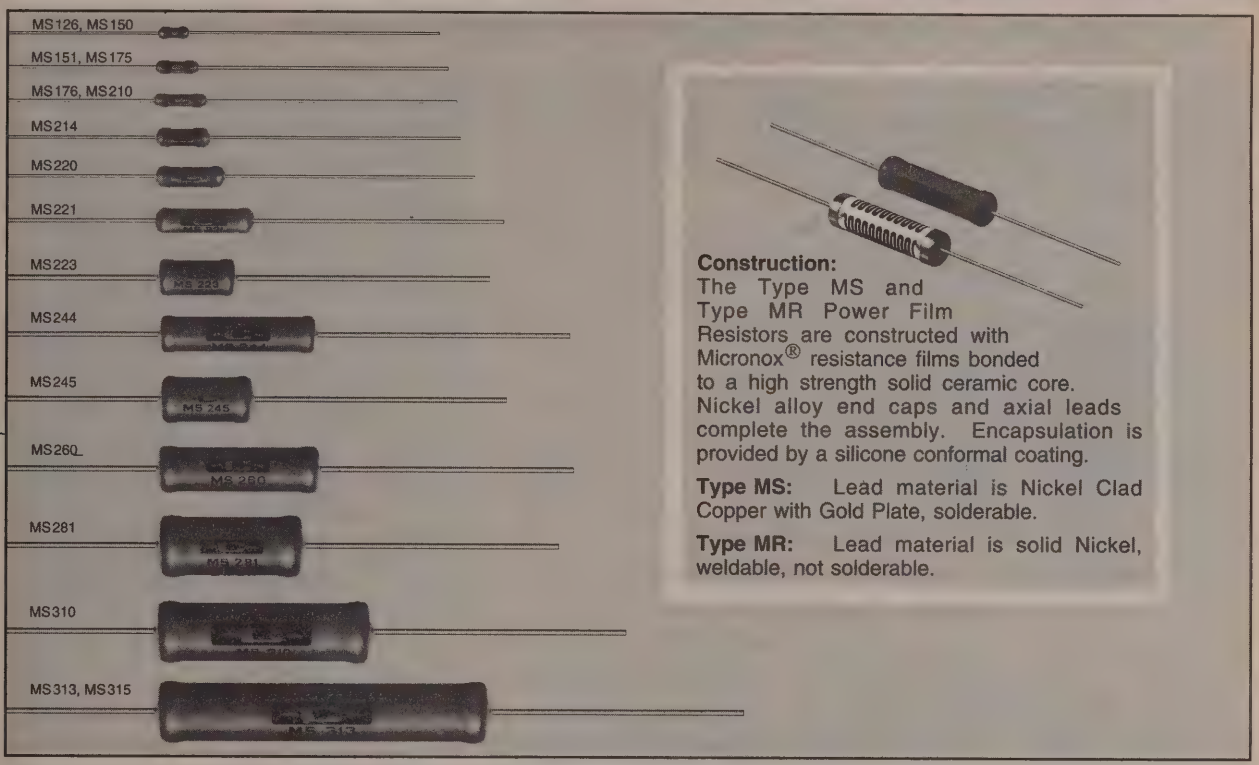
Type MS and MR Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS



Construction:
The Type MS and Type MR Power Film Resistors are constructed with Micronox® resistance films bonded to a high strength solid ceramic core. Nickel alloy end caps and axial leads complete the assembly. Encapsulation is provided by a silicone conformal coating.

Type MS: Lead material is Nickel Clad Copper with Gold Plate, solderable.

Type MR: Lead material is solid Nickel, weldable, not solderable.

Models with Caddock's Non-Inductive Serpentine Pattern are in non-shaded areas.

Specifications:

Resistance Tolerance: ±1% (tolerances to 0.1% on special order).

Temperature Coefficient: See Table for TC value. TC referenced to 25°C, ΔR taken at -15°C and +105°C.

Insulation Resistance: 10,000 Megohms, min.

Overload/Overvoltage: 5 times rated power with applied voltage not to exceed 1.5 times maximum continuous operating voltage for 5 seconds. ΔR 0.5% max. or 0.5 ohm max., whichever is greater.

Thermal Shock: Mil-Std-202, Method 107, Cond. C, ΔR 0.5% max. or 0.5 ohm max., whichever is greater.

Moisture Resistance: Mil-Std-202, Method 106, ΔR 0.5% max. or 0.5 ohm max., whichever is greater.

Load Life: 1,000 hours at rated power, ΔR 0.5% max. or 0.5 ohm max., whichever is greater.

Maximum Operating Temperature: +275°C.

Encapsulation: Silicone Conformal.

CADDOCK
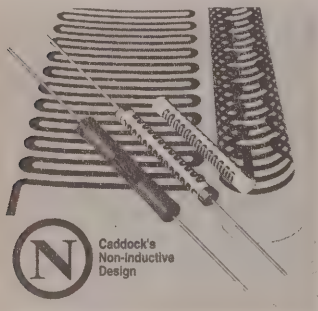
HIGH PERFORMANCE FILM RESISTORS

Type MM and ML Precision Film Resistors

High Temperature Resistors for Geophysical, Aerospace and Industrial Requirements

Type MM and ML resistors have a proven performance history in industrial, computer, military and space applications. Utilizing our proven Micronox® resistance films, these resistors are available with power ratings up to 3 watts and resistance values to 15 Megohms. These resistors are ideal for applications requiring tolerances as close as 0.1% and extended life stability of 0.1% per 1,000 hours.

Most models of Type MM and ML resistors are manufactured with Caddock's Non-Inductive Design that provides for neigh-boring lines to carry current in opposite directions. This efficient non-inductive construction is accomplished without derating of any performance advantages.



Type MM features:

- Max. Operating Temperature to +275°C.
- High Power Rating at +125°C.
- TC of 50 ppm/°C from -15°C to +105°C.
- Non-Inductive Performance Available.

Type ML features:

- Non-Inductive performance at a low cost.
- TC of 50 ppm/°C from -15°C to +105°C.

Type MV Low Resistance Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Values from 0.1 Ohm to 50 Ohms with Exclusive Non-Inductive Design

Type MV Low Resistance Power Film Resistors combine Caddock's Exclusive Non-Inductive Design with many high performance capabilities of Micronox® resistance films to achieve these special advantages:

- Low Resistance - from 0.1 ohm to 50 ohms.
- Maximum Operating Temperature up to +275°C.
- Five Sizes and Power Ratings.
- Full Power Ratings without derating for Non-Inductive Performance.

The interdigitated terminations in the Type MV resistors provide a multiple-path distribution of the current into parallel resistance sections, which provides low resistance values and non-inductive performance. This Exclusive Non-Inductive Design provides significant performance improvements in high speed or inductance sensitive electronic circuits, including high performance power amplifiers, high-speed data transmission systems, high frequency video amplifiers, current switching circuits and current sensing circuits.

For complete price and delivery information on the Type MV resistors, call or write our Sales Office.

Specifications:

Resistance Tolerance: ±1% (2%, 5% and 10% are also available).

Temperature Coefficient: 5 ohms and above ±100 ppm/°C, referenced to 25°C, ΔR taken at -15°C and +105°C.
Below 5 ohms ±(200 ppm + 0.00002 ohm)/°C, referenced to 25°C, ΔR taken at -15°C and +105°C.

Insulation Resistance: 10,000 Megohms, min.

Momentary Overload: 5 times rated power for 5 seconds, ΔR ±(1 percent + 0.001 ohm) max.

Thermal Shock: Mil-Std-202, Method 107, Cond. C, ΔR ±(1 percent + 0.001 ohm) max.

Moisture Resistance: Mil-Std-202, Method 106, ΔR ±(1 percent + 0.001 ohm) max.

Load Life: 1,000 hours at rated power, ΔR ±(1 percent + 0.001 ohm) max.

Encapsulation: Silicone Conformal.

Measurement Note: For these specifications, resistance measurement shall be made at a point 0.3 inch (7.62 mm) from the resistor body.

MP 820 and MP 821 Kool-Tab® Power Film Resistors

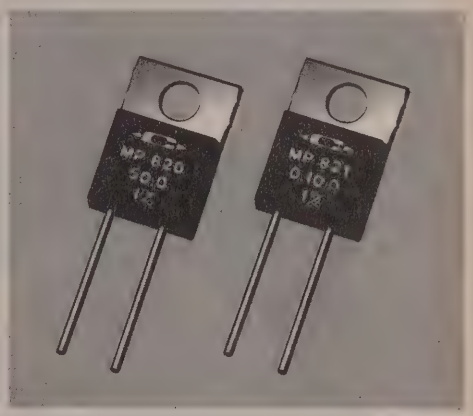
CADDOCK
HIGH PERFORMANCE FILM RESISTORS

20 Watts in the TO-220 Power Package with Metal Mounting Tab - 0.05 Ohm to 10 Kohm

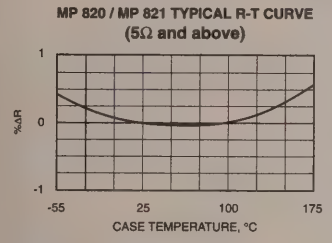
Series MP 820 Kool-Tab® Power Film Resistors introduce our proven Micronox® resistance film system in the widely accepted TO-220 Power Package to provide a compact 20 watt heat sink mountable resistor. The non-inductive design makes this resistor ideal in high frequency communications and power switching circuits.

The special performance features of the series MP 820 Kool-Tab® Power Film Resistor include:

- **20 Watt power rating at 25°C case temperature.**
- **Resistance values to 0.05 ohm for current sense applications.**
- **Non-Inductive Design.**
- Single screw mounting simplifies resistor attachment to the heat sink.
- Low profile provides an easier fit in tight places.
- A molded silicone case for environmental protection.
- Resistor element is electrically isolated from the metal heat sink tab.



Model No.	Power Rating	Dielect. Strength V_{RMS} AC	Max. Voltage	Resistance		Leadwire
				Min.	Max.	
MP820	20 Watts *	1,500	300	10.0 Ω	10 K	Tinned Copper
MP821	20 Watts *	1,500	——	0.05 Ω	9.99 Ω	Tinned Copper



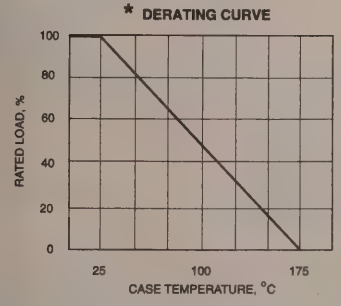
Temperature Coefficient:
TC referenced to 25°C, ΔR taken at +175°C

MP 820:
All resistance values, 0 to +50 ppm/°C

MP 821:
5.00 ohms to 9.99ohms, 0 to +50 ppm/°C
0.50 ohm to 4.99 ohms, 0 to +100 ppm/°C
0.05 ohm to 0.49 ohm, 0 to +200 ppm/°C

Non-Inductive Design

Series MP 820 Kool-Tab® Power Film Resistors are constructed with our Micronox® resistance film fired onto a flat substrate which is thermally bonded to the copper heat sink tab. The resistor body is then molded in silicone to finish the TO-220 configuration. The lead wire attachment and resistance element geometry are configured to provide outstanding non-inductive performance.



The case temperature is to be used for purposes of establishing the maximum applied power. See Derating Curve. The case temperature measurement is made on the metal mounting tab against the molded body, the device mounted on a heat sink, with thermal grease applied at a mounting torque of 6 to 8 in-lbs. Without a heat sink, when in free air at 25°C, the MP 820 / MP 821 is rated for 2.25 watts.

Derating for case temperature above 25°C is 0.133 W/°C.

Mounting Note: Maximum torque to be applied to mounting screw is 8 in-lbs.

Specifications:

Resistance Tolerance: ±1% (0.5%, 2%, 5% and 10% are also available).

Insulation Resistance: 10,000 Megohms, min.

Terminal Strength: Mil-Std-202, Method 211, Cond. A (Pull Test) 5 lbs., ΔR ±(0.2 percent + 0.001 ohm) max.

Thermal Shock: Mil-Std-202, Method 107, Cond. F, ΔR ±(0.3 percent + 0.001 ohm) max.

Momentary Overload: 2 times rated power with applied voltage not to exceed 1.5 times maximum continuous operating voltage for 5 seconds, ΔR ±(0.3 percent + 0.001 ohm) max.

Moisture Resistance: Mil-Std-202, Method 106, ΔR ±(0.5 percent + 0.001 ohm) max.

Load Life: 2,000 hours at rated power, ΔR ±(1.0 percent + 0.001 ohm). Power rating dependent upon case temperature. See derating curve.

Shock: 100G, Mil-Std-202, Method 213, Cond. I, ΔR ±(0.2 percent + 0.001 ohm) max.

Vibration, High Frequency: Mil-Std-202, Method 204, Cond. D, ΔR ±(0.2 percent + 0.001 ohm) max.

Measurement Note: For these specifications, resistance measurement shall be made at a point 0.2 inch (5.08 mm) from the resistor body.

CADDOCK
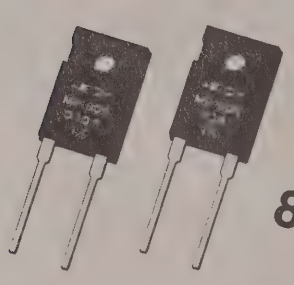
HIGH PERFORMANCE FILM RESISTORS

Type MP Kool-Pak™ Power Film Resistors

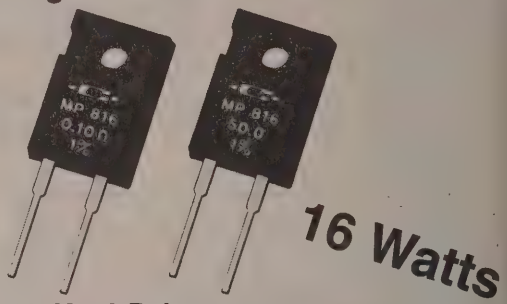
TO-126 and TO-220 Style Power Packages - Non-Inductive Designs

MP808 and MP816 Power Packages are Cost Effective Designs with an All Molded Package Configuration



MP 808 Kool-Pak™ Power Resistors
TO-126 Style Power Package

- 8 Watts at 25°C Case Temperature derated to zero at 150°C
- Thermally Conductive Molded Package
- Lower Cost
- Resistance Range of 0.10 ohm to 10K



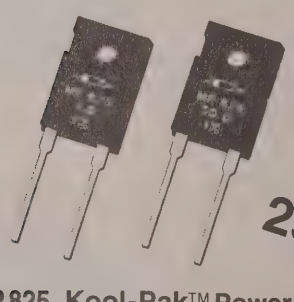
MP 816 Kool-Pak™ Power Resistors
TO-220 Style Power Package

- 16 Watts at 25°C Case Temperature derated to zero at 150°C
- Thermally Conductive Molded Package
- Lower Cost
- Resistance Range of 0.10 ohm to 10K

Construction of MP808 and MP816: The MP 808 and MP 816 Kool-Pak™ Power Film Resistors are constructed with Caddock's Micronox® resistance film fired onto a flat ceramic substrate. The terminal attachment and resistance element geometry are configured to provide outstanding non-inductive performance. The resistor body is completely surrounded by a high thermal conductivity molding compound to finish this **cost effective power resistor package.**

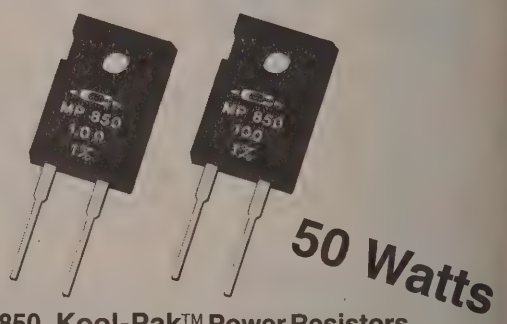
Patents Pending

MP825 and MP850 Power Packages Include an Integral Metal Mounting Surface for Highly Efficient Thermal Transfer



MP 825 Kool-Pak™ Power Resistors
TO-126 Style Power Package

- 25 Watts at 25°C Case Temperature derated to zero at 150°C
- Copper Heat Sink Integral in the Molded Package
- Resistance Range of 0.10 ohm to 10K



MP 850 Kool-Pak™ Power Resistors
TO-220 Style Power Package

- 50 Watts at 25°C Case Temperature derated to zero at 150°C
- Copper Heat Sink Integral in the Molded Package
- Resistance Range of 1.0 ohm to 10K

Construction of MP825 and MP850: The MP 825 and MP 850 Kool-Pak™ Power Film Resistors are constructed with Caddock's Micronox® resistance film fired onto a flat ceramic substrate. The terminal attachment and resistance element geometry are configured to provide outstanding non-inductive performance. **The ceramic substrate is bonded to a copper heat sink which becomes the metal mounting surface.** This assembly is molded in a high thermal conductivity molding compound with the copper heat sink flush with the back surface of the part.

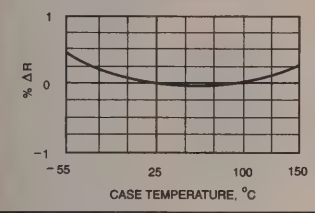
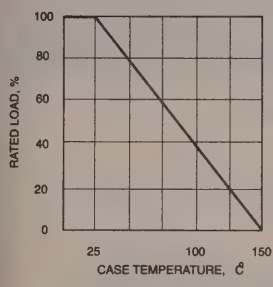
TYPICAL R-T CURVE
(5 Ω and above)



Temperature Coefficient:
TC referenced to 25°C, ΔR taken at +150°C

5.00 ohms and above, 0 to +50 ppm/°C
0.50 ohm to 4.99 ohms, 0 to +100 ppm/°C
0.10 ohm to 0.49 ohm, 0 to +200 ppm/°C

*** DERATING CURVE**



The case temperature is to be used for purposes of establishing the maximum applied power. See Derating Curve. The case temperature measurement is made with the thermocouple contacting the bottom insulated mounting surface of the package (center of bottom surface), the device mounted on a heat sink, thermal grease applied at a mounting torque of 6 to 8 in-lbs. Without a heat sink, when in free air at 25°C, the MP808 and the MP825 are rated for 1.25 watts, the MP816 and the MP 850 are rated for 2.25 watts.

Deratings for case temperature above 25°C are:
MP808: 0.064 W/°C MP816: 0.128 W/°C
MP825: 0.200 W/°C MP850: 0.400 W/°C

Mounting Note: The MP Kool-Pak™ Resistors must be mounted using a screw and compression washer mounting technique. This will provide sufficient pressure on the package over time and through large temperature variations to maintain the maximum power dissipation capability. Maximum torque to be applied to mounting screw is 8 in-lbs.

HIGH PERFORMANCE FILM RESISTORS

Type MK Precision Power Radial-Lead Film Resistors

Non-Inductive with New Expanded Resistance Range — 1 Ohm to 100 Megohms

Here are the low cost precision resistors that provide high density packaging in large volume printed circuit applications. Available in two miniature rectangular package configurations with standard lead spacings, Type MK Precision Power Radial-Lead Film Resistors now cover the entire resistance range from 1 ohm to 100 Megohms.

Constructed with Caddock's Micronox® resistance films fired onto a solid ceramic substrate, Type MK Precision Film Resistors combine all of these outstanding advantages:

- **±1% Resistance Tolerance is Standard** - tolerances to ±0.1% are available on special order.
- **Operating Temperature** - from -55°C to +175°C.
- **Full Power Rating at +125°C.**
- **Temperature Coefficient is Only 50 ppm/°C from 5 ohms to 5 Megohms and 80 ppm/°C up to 100 Megohms** - referenced to 25°C with the ΔR taken at -15°C and +105°C.
- **Extended Life Stability is Typically Better Than 0.1% per 1,000 Hours.**
- **Caddock's Non-Inductive Performance** - provides faster settling times and minimum distortion in all types of high frequency circuits.

This combination of performance advantages in a small, standardized case can simplify many engineering and production problems:

One size of Type MK resistor can replace many sizes of axial-lead resistors.

This table of "RN" style axial-lead resistors shows the many sizes and power ratings that can be replaced with either of the two models of Type MK Precision Film Resistors within the maximum allowable voltage ratings.

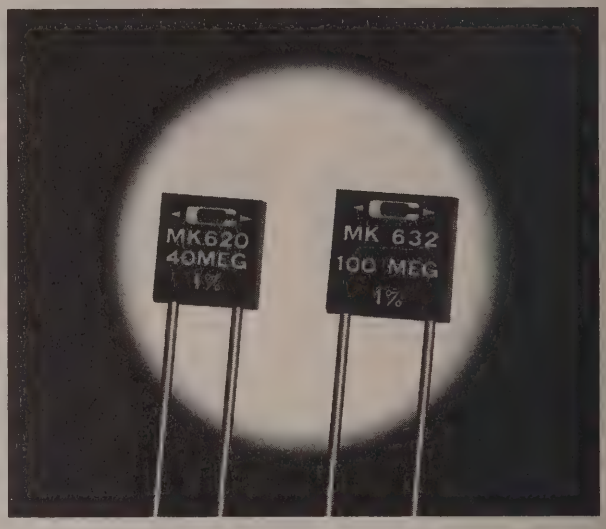
Comparison of Type MK and "RN" Ratings and Dimensions

Resistor Type	Power Rating	Maximum Resistance	Mounting Hole Spacing	
MK120 or MK620	.50 W	40 Megohms	.150 (3.81)	Even the smallest Type MK resistor can replace all of these RN type resistors
MK132 or MK632	.75 W	100 Megohms	.200 (5.08)	
RN50	.05 W	1 Megohm	.400 (10.15)	
RN55	.10 W	5 Megohms	.500 (12.70)	
RN60	.125 W	10 Megohms	.625 (15.90)	
RN65	.25 W	20 Megohms	.875 (22.20)	
RN70	.50 W	40 Megohms	1.000 (25.40)	

DIMENSIONS IN INCHES AND (MILLIMETERS)

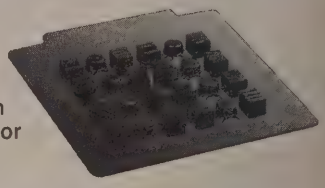
The largest Type MK - rated at .75 watt - requires less board space than even the .05 watt RN50.

The smallest Type MK - rated at .50 watt - provides power dissipation **equal** to the RN70 resistor. The RN70 resistor requires a mounting hole spacing of 1 inch and a side-to-side spacing of .25 inch, resulting in a total mounting area of .25 square inch - **10 times the area required for a .50 watt Type MK resistor!**



One standard resistor configuration can simplify board layouts.

With the exceptionally wide range of resistance values that are available in each model of Type MK Precision Film Resistors, circuits can now be designed for maximum packaging densities without the need for leaving extra space where resistor value changes can require larger resistors or non-uniform lead spacings.



Standardization of resistor size can speed assembly procedures and reduce procurement costs.

The standardization of resistor size can pay additional dividends by simplifying assembly procedures. The radial leads do not require additional bending prior to insertion, and the standard lead spacing can reduce the time required for assembly.

The combination of higher power ratings and smaller size can also lower procurement costs. By reducing the wide variety of sizes and types of axial-lead resistors to a single, standardized resistor type, unit prices can be lowered and inventory problems simplified. For specific price and delivery information, call or write our Sales Office.

Type MK Precision Power Radial-Lead Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MK Precision Film Resistors - Low and Standard Resistance Ranges

Model No.	Wattage	Max. Voltage	Oper. Temp. Max.	Dielect. Strength	Resistance			Dimensions	Encapsulation	Leadwire
					Low Min.	Standard Min.	Standard Max.			
MK120	.50	200	175°C	300	1 Ω	5 Ω	2 Meg	Ref. Case "A" Dwg.	Transfer Molded	Tinned Copper
MK132	.75	400	175°C	400	1 Ω	5 Ω	5 Meg	Ref. Case "B" Dwg.	Transfer Molded	Tinned Copper

Resistance Tolerance: ±1% (tolerances to ±0.1% available on values of 30 ohms or higher).

Overload/Overvoltage: 5 times rated power with applied voltage not to exceed 1.5 times maximum continuous operating voltage for 5 seconds, ΔR ±(0.15 percent + 0.01 ohm) max.

Operating Temperature: -55°C to +175°C.

Temperature Coefficient:

Resistance Range	Temp. Coef.
Standard : 5 Ω and above	50 ppm/°C
Low : 1 Ω to 4.99 Ω	200 ppm/°C

Temperature Coefficient referenced to +25°C, ΔR taken at -15°C and +105°C.

Insulation Resistance: 10,000 Megohms, minimum.

Load Life: 1,000 hours at rated power at +125°C, ΔR ±(0.4 percent + 0.01 ohm) max.

Thermal Shock: Mil-Std-202, Method 107, Cond. B, ΔR ±(0.2 percent + 0.01 ohm) max.

Moisture Resistance: Mil-Std-202, Method 106, ΔR ±(0.5 percent + 0.01 ohm) max.

Type MK Precision Film Resistors - Extended Resistance Range

Model No.	Wattage	Max. Voltage	Oper. Temp. Max.	Dielect. Strength	TC ppm/°C	Resistance		Dimensions	Encapsulation	Leadwire
						Min.	Max.			
MK620	.50	200	175°C	300	80	2.01 Meg	40 Meg	Ref. Case "A" Dwg.	Transfer Molded	Tinned Copper
MK632	.75	400	175°C	400	80	5.01 Meg	100 Meg	Ref. Case "B" Dwg.	Transfer Molded	Tinned Copper

Resistance Tolerance: ±1% (consult factory for tighter tolerances).

Overload/Overvoltage: 1.5 times max. voltage for 5 seconds, ΔR 0.5% max.

Operating Temperature: -55°C to +175°C.

Temperature Coefficient: See Table for TC value. TC referenced to +25°C, ΔR taken at -15°C and +105°C.

Insulation Resistance: 10,000 Megohms, minimum.

Load Life: 1,000 hours at rated power, ΔR 0.5% max.

Thermal Shock: Mil-Std-202, Method 107, Cond. B, ΔR 0.5% max.

Moisture Resistance: Mil-Std-202, Method 106, ΔR 0.5% max.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

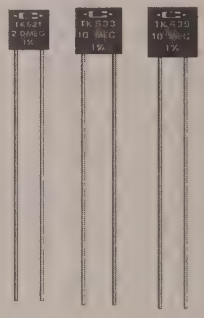
Type TK Low TC Precision Radial-Lead Film Resistors

Low TC of 5 ppm/°C, 10 ppm/°C or 20 ppm/°C and Resistance Range from 1Kohm to 10 Megs

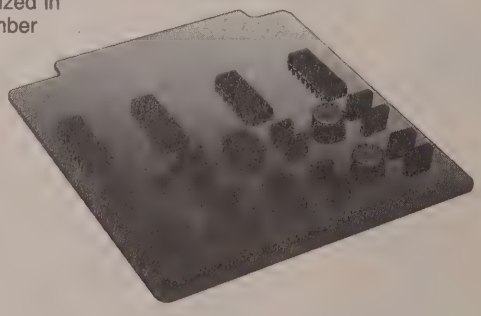
Caddock introduces a new design element for precision electronic circuitry - an advanced technology breakthrough that solves many critical circuit stability problems - the **Type TK Low TC Precision Radial-Lead Resistors with the Tetrinox® resistance system.**

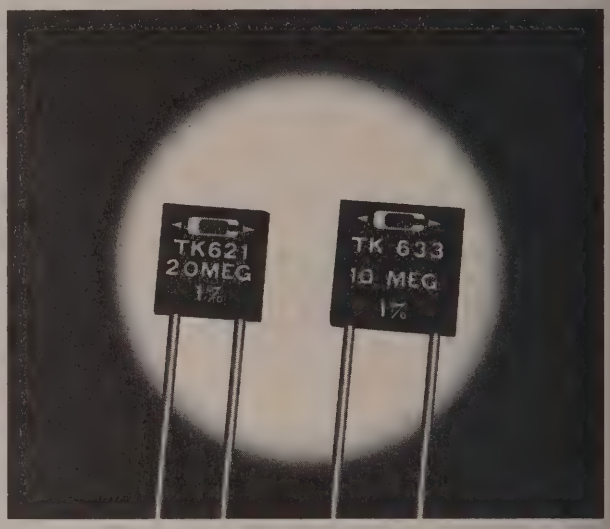
Type TK Low TC Precision Radial-Lead Film Resistors provide a combination of performance advantages never before available in a resistive component:

- **Low Temperature Coefficient** - better than 5 ppm/°C, 10 ppm/°C or 20 ppm/°C over the entire temperature range from -55°C to +125°C!
- **Long-Term Absolute Stability** - better than ±0.05% per 2,000 hours of operation.
- **Extended Resistance Range** - from 1,000 ohms to 10 Megohms.
- **Precision Tolerances** - ±1% is standard, and tolerances as close as ±0.05% are available.
- **Wide Operating Temperature Range** - from -55°C to +175°C.
- **Small Size** - with three miniature rectangular cases for maximum packaging density and minimum mounting area.
- **High Power Density** - with power ratings of .2 watt and .3 watt in molded cases, the largest of which is a standard CK06 package.



- **Caddock's Non-Inductive Performance** - provides faster settling times and minimum distortion in all types of high frequency circuits.
- **High Density Packaging** - the radial-lead mounting and small rectangular case of the Type TK resistors permit high packaging densities in low profile circuitry. Because the three models of the Type TK resistors are available in an exceptionally wide range of resistance values, lead spacing and mounting space can be standardized in a larger number of designs.





Building on over 20 years of experience with our unique complex oxide technology, Caddock has perfected the Tetrinox® resistance system - the first high resistance system to provide a TC that is well within 10 ppm/°C and that is also essentially linear over the entire temperature range from -55°C to +125°C.

The exceptional performance of Type TK resistors can achieve improvements in many circuit applications:

Low TC "Matched-Pair" Voltage Dividers Can be Assembled Without Pre-Selection of Resistors.

An important application for Type TK resistors is in "matched-pair" voltage dividers where the low 10 ppm/°C temperature coefficient provides ratio tracking of less than 20 ppm/°C without resistor pre-selection or special testing.

With factory selection, Type TK resistor pairs can be matched to within 1 ppm/°C.

Extended Resistance Range Reduces Power Requirements

Because the Type TK resistors provide resistance values as high as 10 Megohms - values that are up to 100 times higher than other types of ultra-low TC resistors - engineers can now design precision circuits with lower current drain and lower power requirements.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type TN Lab Grade Low TC Precision Film Resistors

Low TC of 5 ppm/°C, 10 ppm/°C or 20 ppm/°C from 0°C to 70°C
Tolerance of ±0.025%, ±0.05%, ±0.1% to ±1%, Values from 1 Kohm to 1 Meg

Type TN Lab Grade Low TC Film Resistors were specifically developed for use in 0°C to +70°C applications which require a low temperature coefficient and a high degree of precision. These resistors combine the outstanding characteristics of Caddock's Tetrinox® resistance system with a space efficient, non-inductive, radial-lead design. These resistors are intended for precision analog designs where the system is not exposed to full military or space grade operating conditions. For full military or space grade operating conditions, we recommend Caddock's **Type TK Low TC Precision Radial-Lead Film Resistors.** For lab grade applications which require higher voltage ratings (up to 1,400 volts) and power ratings (up to 0.75 watt), we recommend Caddock's **Type TF Low TC Ultra-Precision Film Resistors**.

The performance features of the Type TN Lab Grade Low TC Precision Film Resistors are:

- **Low Temperature Coefficient** - 5, 10 or 20 ppm/°C.
- **Ultra-Precision** - 6 standard tolerances from ±0.025% to ±1%.
- **Resistance Range** - from 1 Kohm to 1 Megohm.
- **Non-Inductive Design**.
- **Radial-Lead Design** - conserves board space.

Type TF Low TC Ultra-Precision Film Resistors

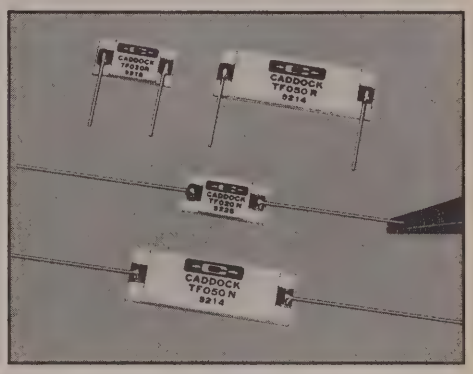
CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Absolute TC to 5 ppm/°C, Values from 1 Kohm to 125 Megohms, Absolute Tolerance to ±0.01%

Type TF precision resistors employ the Caddock Tetrinox® resistance films - the resistance system that sets a new standard for high value, ultra-stable precision resistors that provide an exceptional combination of performance characteristics:

- **Ultra-Precision** - Seven standard resistance tolerances from ±1% to ±0.01%.
- **A Wide Range of Resistance Values** - from 1 Kohm to 125 Megohms.
- **Low Temperature Coefficient** - 5 ppm/°C, 10 ppm/°C or 15 ppm/°C.
- **Long-Term Stability** - to 0.01% per 1,000 hours.

This completely new approach to quantity production of ultra-precision resistors is the result of combining our unique complex oxide technology with an advanced high thru-put laser manufacturing capability.



Type TF - Standard Resistance Range - 1 Kohm to 10 Megohms

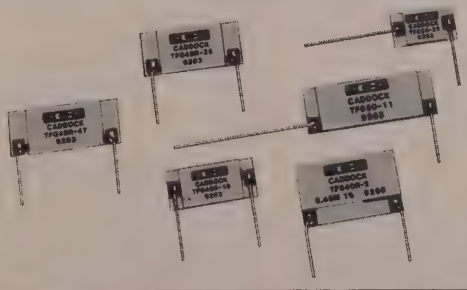
Custom Type TF Resistors

Additional cost savings can be realized when your high volume ultra-precision Type TF resistor is optimized for:

- Voltage rating
- Power rating
- Mechanical configuration
- Ratio matched sets



And for special requirements, custom Type TF resistors are available with:

- TC of 5 ppm/°C, 10 ppm/°C, 15 ppm/°C, 20 ppm/°C or 25 ppm/°C.
- Shelf stability of 0.0025% per year.

Type TF resistors can also be produced with custom-spaced radial leads that will plug directly into your existing circuit layout.

CADDOCK
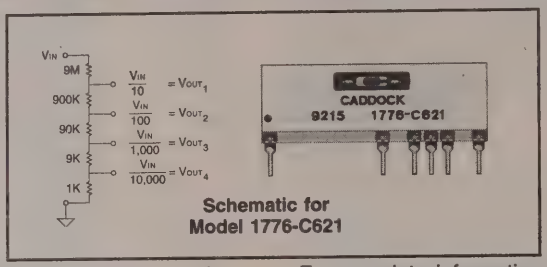
HIGH PERFORMANCE FILM RESISTORS

Type 1776 Precision Decade Resistor Voltage Dividers

Input Voltage Dividers for Digital Multimeters and Range-Switching Instruments

The exceptional performance of this extensive family of Type 1776 Precision Decade Resistor Voltage Dividers has been achieved through the special combination of advantages provided by Caddock's Tetrinox® resistance films. This advanced film resistor technology provides the performance characteristics required by the precision input signal circuits of both bench-type and laboratory digital instruments.

In addition to requiring less board space, these compact precision resistor networks deliver higher performance than selected discrete resistor sets and thin-film networks.



Schematic for Model 1776-C621

There are now 39 standard models in the expanded family of Type 1776 precision resistor networks that include -

- 3, 4 and 5 - decade voltage dividers with ratios from 10:1 to 10,000:1.
- 1,200 volts continuous ratings and overvoltage to 2,000 volts.
- Many combinations of Ratio and Absolute Tolerance, and Ratio and Absolute Temperature Coefficient.

For complete information on quantity price and delivery, call or write our Sales Office.

Specifications:

(Numbers inside circles reference columns in Model No. table)

① **Ratio Tolerance:** Maximum ratio difference between two resistors in the network. (See the specific Figures for the Ratio Definition).

② **Ratio Temperature Coefficient:** Ratio track from 0°C to +70°C.

③ **Voltage Coefficient of Ratio (ppm/volt):** R1 in series with any combination of R2, R3, R4 and R5, 100 volts to rated voltage.

④ **Load Life:** Ratio stability of resistance under full load, rated voltage applied to R1 in series with any combination of R2, R3, R4 and R5.

⑤ **Shelf Stability of Ratio:** Six months at shelf conditions.

⑥ **Overvoltage:** Maximum voltage of 1.67 times rated DC voltage. Volts DC or peak AC applied to R1 and any combination of R2, R3, R4 and R5 in series with R1 for 10 seconds.

⑦ **Voltage Rating:** DC or RMS AC voltage applied to R1 in series with any combination of R2, R3, R4 and R5.

Storage Temperature: -55°C to +85°C.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type 1787 Current Shunt Resistor Networks

Accurate Current Sensing in Multi-Range Instrumentation

Type 1787 Current Shunt Resistor Networks utilize Caddock's Micronox® resistance films and advanced high thru-put laser manufacturing capabilities to achieve many vital advantages in precision current measurement circuits, including laboratory and bench-type digital instrumentation:

- The thin-profile single-package configuration replaces as many as four discrete current shunt resistors.
- The monolithic construction and standardized lead spacing simplify installation.
- Caddock Micronox® resistance films provide exceptional stability for improved long-term measurement accuracy.

Twelve standard models in five network arrangements provide the specific accuracy and resistance values required for a wide range of current measuring instruments and circuits.

Prototype quantities of most models of the Type 1787 Current Shunt Resistor Networks are available either from stock or within 6 weeks after receipt of order.

① **Absolute Tolerance:** Tolerance of R_A, R_B, R_C or R_D when measured in accordance with proper Figure No.

② **Absolute Temperature Coefficient:** Temperature coefficient of R_A, R_B, R_C or R_D from 0°C to +70°C, referenced to +25°C.

③ **Load Life:** Stability of R_A, R_B, R_C or R_D with full power applied individually for 2,000 hours at +70°C.

④ **Shelf Life:** Stability of R_A, R_B, R_C or R_D for six months at shelf conditions.

Storage Temperature: -55°C to +85°C.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

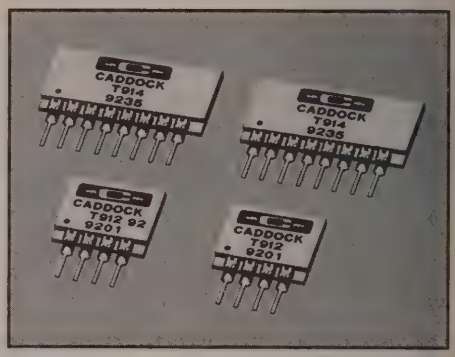
Type T912 and T914 Precision Resistor Networks

Resistor Pairs and Quads with Ratio Characteristics for Precision Analog Circuits

Type T912 and T914 Precision Resistor Networks are constructed with Caddock Tetrinox® resistance films to achieve the precise ratio performance and stability required by highly accurate amplifier circuits, voltage reference circuits and precision bridge circuits.

- **Ratio Tolerance** - from ±0.1% to ±0.01%.
- **Ratio Temperature Coefficient** - 10 ppm/°C, 5ppm/°C or 2 ppm/°C.
- **Absolute Temperature Coefficient** - 25 ppm/°C.
- **Ratio Stability of Resistance at Full Load for 2,000 hours** - within ±0.01%.
- **Shelf Life Stability of Ratio for 6 Months** - within ±0.005%.

Both the T912 and the T914 are available in 14 standard resistance values between 1,000 ohms and 1 Megohm. Caddock's high thru-put manufacturing capability assures that prototype and large-volume production quantities are available either from stock or within 6 weeks after receipt of order.



Standard Type T912 and Type T914 Precision Resistor Networks

In addition to the 14 standard **equal value** models of the Type T912 and T914, the Type T912 can also be ordered with -

- **10:1 Resistance Ratio** - for use in amplifier gain-setting.
- **9:1 Resistance Ratio** - for use in voltage reference dividers.

Ordering Information: T912 - A 10K - 010 - 02

Model Number

Ratio Code Letter: *

A - T912 with R_1: R_2 where $R_2 = 10R_1$

1K:10K	10K:100K	40K:400K
2K:20K	20K:200K	50K:500K
5K:50K	25K:250K	100K:1 Meg

B - T912 with R_1: R_2 where $R_2 = 9R_1$

2K:18K	20K:180K	50K:450K
5K:45K	25K:225K	100K:900K

No Letter - T912 with $R_1 = R_2$

No Letter - T914 with $R_1 = R_2 = R_3 = R_4$

Standard Resistance Values: * (R_1)

1K	10K	40K	200K	500K
2K	20K	50K	250K	1 Meg
5K	25K	100K	400K	

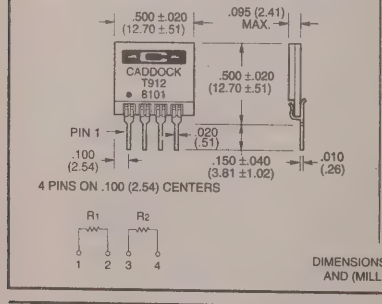
Special or mixed resistance values are available as custom networks. See the custom section at the bottom of this page.

Ratio Tolerance: * -100 = 0.1% -020 = 0.02% -050 = 0.05% -010 = 0.01%

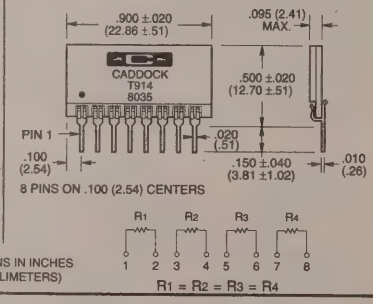
Ratio Temperature Track (0°C to 70°C): * -10 = 10 ppm/°C -05 = 5 ppm/°C -02 = 2 ppm/°C

* (This information appears on the back side of the network)

Type T912
Ratios Available: 1:1, 9:1, 10:1 and Custom.



Type T914
Ratios Available: 1:1 and Custom.



DIMENSIONS IN INCHES AND (MILLIMETERS)

R1 = R2 = R3 = R4

Specifications:

Absolute Tolerance: ±0.1% for all resistors.

Absolute Temperature Coefficient: ±25 ppm/°C referenced to 25°C, ΔR taken at 0°C and 70°C.

Voltage Rating: 30 volts DC or RMS AC applied to R_1, R_2, R_3 and R_4.

Power Rating: 0.10 watt applied to R_1, R_2, R_3 and R_4 (not to exceed rated voltage).

Package Power Rating: Type T912, 0.200 watt. Type T914, 0.400 watt.

Storage Temperature: -55°C to +105°C.

Insulation Resistance Between Isolated Pins: Pin 2 to Pin 3, Pin 4 to Pin 5, or Pin 6 to Pin 7, 1,000 Megohms, minimum.

Dielectric Strength Between Isolated Pins: 50 volts RMS AC.

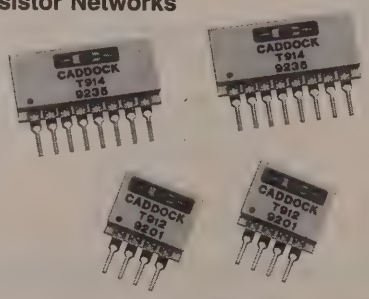
Ratio Stability Under Load: Ratio change between any two resistors in the network under full load for 2,000 hours at 70°C, 0.01% maximum.

Shelf Stability of Ratio: Six months at shelf conditions, 50 ppm maximum.

Custom Model T912 and T914 Precision Resistor Networks

For applications requiring non-standard resistance values, the T912 and T914 custom configurations can include these special features:

- Mixed resistance values with a maximum ratio of 250-to-1. (Example: 1.0 Megohm and 4 K)
- Absolute TC as low as 15 ppm/°C.
- Ratio TC as low as 2 ppm/°C.
- Custom voltage ratings.
- Matched resistors of any special value between 1 K and 2 Megohms.



Call or write our Applications Engineering for performance, price and availability of these custom resistor networks.

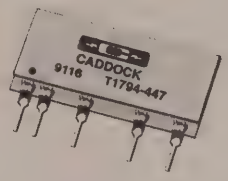
Precision Resistor Networks Overview

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Custom Precision SIP Resistor Networks Engineered to your Application...Fast

FAST Custom Precision Networks within 8 weeks

- Resistance Values from 100 ohms to 50 Meg
- Absolute Tolerance from ±0.025% to ±0.25%
- Ratio Tolerance as tight as 0.01%
- Absolute TC of 15 ppm, 25 ppm or 50 ppm/°C
- Ratio TC of 5 ppm, 10 ppm, 25 ppm or 50 ppm/°C



Standard Precision SIP Resistor Networks

For Precision Analog Designs

Type T912 Two Resistor Networks
Type T914 Four Resistor Networks

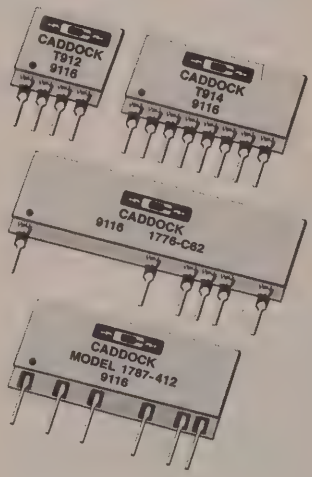
- **Ratio Tolerance 0.01%** to 0.10%
- **Ratio TC 2 ppm**, 5 ppm or 10 ppm/°C

Type 1776 Decade Voltage Dividers

- Ratios of 10:1, 100:1, 1000:1 and 10000:1
- Ratio Tolerance 0.02%, 0.05%, 0.10% to 0.50%
- Ratio TC 5 ppm, 10 ppm, 25 ppm or 50 ppm/°C
- 1200V Input Voltage Rating

Type 1787 Current Shunts

- Resistance Values from 0.9 ohm to 100 ohms
- 0.1Ω Available in a Custom Network
- Absolute Tolerance from ±0.05% to ±0.25%
- Absolute TC of 25 ppm to 100 ppm/°C



Transient Tolerant Precision SIP Networks

For Telecom Applications and Voltage / Power Monitoring Applications

- Lightning Transient Handling while maintaining Precision Tolerance.
- Quick Fail-Safe Performance when exposed to Cold Start Voltages of 120 VAC, 240 VAC or 600 VAC. Protects Telephone System Wiring from damage or ignition.
- Available with Thermal Cut Off Protection mounted on the Resistor Network substrate. When excessive Low Voltage Power Cross causes excessive heating in the Resistor Network, the Thermal Cut Off opens the circuit and protects the circuit board from heat damage or ignition.
- Resistance: 50Ω Pair, 100Ω Pair, 150Ω Pair or 200Ω Pair
- Precision Ratio Tolerance of 0.1%, 0.25%, 0.5% or 1.0%

CARBORUNDUM® NON-INDUCTIVE POWER RESISTORS

Choose Type SP for great A-C power handling capability, whether it be at power frequency or many megahertz.

Choose Type A when high resistance is required in a high power non-inductive resistor.

Choose Type AS for its ability to absorb huge amounts of energy and for its non-inductive property at high voltage.

CHARACTERISTICS	Type SP	Type AS	Type A
Maximum Operating Temperature: °C	350	230 150*	230
Temperature Coefficient: Percent per degree C, -55°C to maximum rated temperature	+0.2 -0.08	+0.0 -0.08	+0.0 -0.2
Voltage Coefficient: Maximum percent per kilovolt per inch active length (overall length less termination)	1.0	1.0	—
Short Time Overload: Maximum percent change after 5 cycles 10 times rated power, 5 seconds on, 90 seconds off	2.0	2.0	—
Moisture Resistance: Maximum percent change when tested per MIL-STD-202 method 103	2.5	2.5	2.5

*With epoxy insulation for use in oil.

STANDARD SIZES

(Special sizes are also available: consult factory.)

Type	A	B	C (SP & AS)	C (A)	D

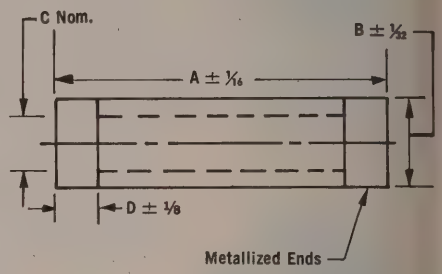
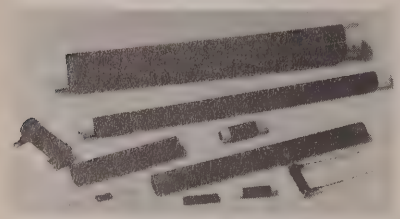
890 SP, AS, & A	18.0	1.00	0.75	0.5	0.88
891 SP	18.0	2.00	1.50	—	1.00
892 SP	24.0	2.00	1.50	—	1.00



SERIES 800 AND 1000

This general line is available in a wide variety of sizes and terminations. They retain the non-inductive and heavy load characteristics of all Carborundum ceramic resistors. These resistors can handle up to 1000 watts, 165 KJ and 165 KV in resistance values from 1 ohm to 1 megohm.



Parts are specified by the four or five character type number (for example 885SP, 888AS, 890A), the first two digits of the resistance, a single digit to indicate the power of ten multiplier, and a "J" for ± 5%, a "K" for ± 10%, or an "L" for ± 20%. Where the resistance is less than ten ohms, the power of ten multiplier is not used, and an "R" replaces the decimal point. Thus R50 = 0.50 ohm, 7R5 = 7.5 ohm, 220 = 22.0 ohm, 152 = 1500 ohm, etc. Standard construction for SP resistors is aluminum metalization. Type A resistors have nickel metalization. Type AS resistors have silver metalization with a dielectric coating. This standard feature is designated by "DS." Radial tab ("G") and axial tab ("H") terminations are available on SP and AS resistors. "No Arc" ("N") butt-end terminations are available on AS resistors for applications requiring high energy or current density performance. Epoxy coating is available on AS and A resistors for use in oil ("O"). Typical part numbers: 889SP501K represents a Type SP, 500 ohm ±10%; 886AS500KDS represents a standard Type AS, 50 ohm ±10%, with dielectric coating and silver terminations. 890A503L represents Type A, 50,000 ohm ±20%. 886AS500NO represents Type AS, 50 ohm ±10% with "No Arc" terminal and epoxy coating. Consult plant for termination dimension details and additional options and part number detail.

CARBORUNDUM

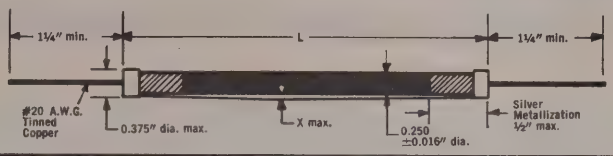
CARBORUNDUM® NON-INDUCTIVE POWER RESISTORS FOR SPECIAL PROBLEM SOLUTIONS

SERIES 102/104/106/109AS & SP PENCIL-TYPE RESISTORS

These 1/4" diameter resistors are available in a variety of lengths. Pencil shaped resistors offer unique non-inductive and high-voltage properties in a compact, easily-wired configuration.

Type AS for high voltage and energy applications.

Type SP for high AC power handling capabilities.



Length	Type No.	Resistance Available (ohms) Min.	Resistance Available (ohms) Max.	Average Power @ 40°C (watts)	Peak** Energy (joules)	Peak ** Voltage (volts)

** Allowable peak energy/voltage will depend on the resistance value.

TYPE 234 AND 231 RESISTORS

Carborundum type 234 and 231 resistors are a small size non-inductive bulk type resistor (there are no spirals or windings), capable of dissipating a full 10 watts of power (Type SP) or absorbing 275 Joules of energy (Type AS).

234 — 1/4" x 1"

231 — 5/32" x 3/4"

Specifications	234SP	234AS	231SP	231AS

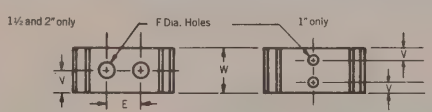
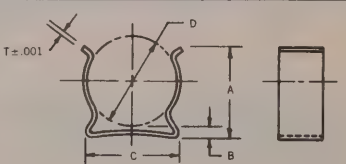
TERMINATION AND MOUNTING

Electrical connection to the resistive bodies of resistors is made by flamesprayed metal end bands. The standard metal is aluminum for type SP, nickel or silver for types AS and A. Special terminations of brass or copper overspray or tinned ends are readily available specials. Add "B," "C," or "T" respectively to the part number to designate these special terminations.

In most cases, connections to the resistors may be made by stock clips and connector caps such as these:





MOUNTING CLIPS DIMENSIONS

Wire Wound: Axial Lead – Type AL

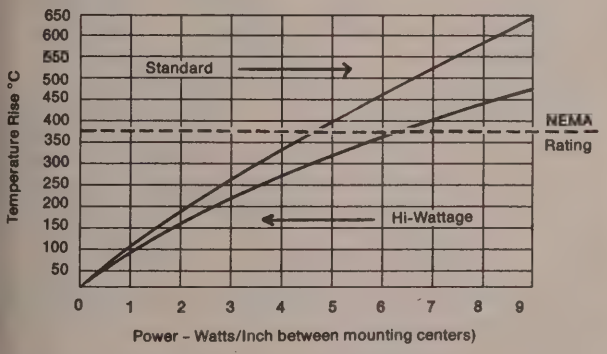
Most economical alternative for your power disipating needs

Features:
- ☐ High quality alloy resistance wire with silicone impregnated, interwoven fiberglass core
- ☐ Variety of core diameters and lengths
- ☐ Variety of temperature coefficients
- ☐ Available coated with proprietory silicone insulation
- ☐ Tape & reel packaging to customer specification
- ☐ U.S. made

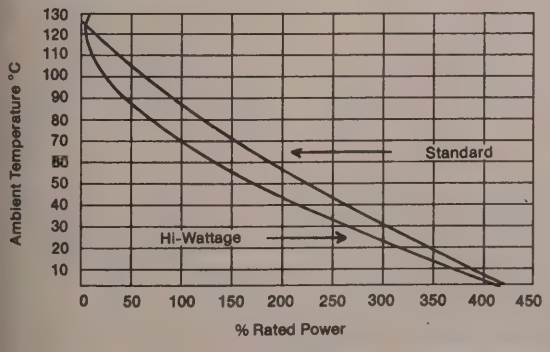
Specifications:
- ☐ Resistance range: .02 ohm min. to 13k (depending on core length)
- ☐ Tolerance: ±10% standard; down to ±2% available
- ☐ Temperature coefficient: to 200 PPM (consult factory)
- ☐ Power rating: 4, 5, or 6 watts per inch available
- ☐ Terminals: oxygen-free, tinned copper leads: .032"-.040", lead lengths up to 3"; 10 lb. minimum pull strength, formed leads available to customer specification

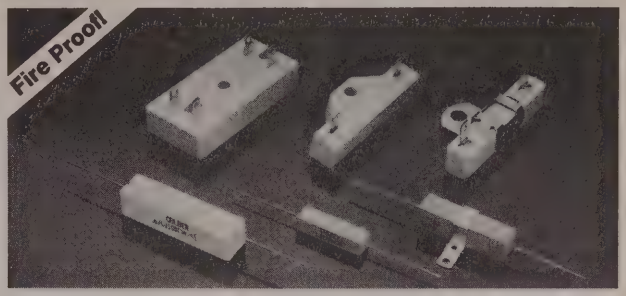
Performance:

Temperature Rise vs. Load Curve



Derating Curve for High Ambient Temperature





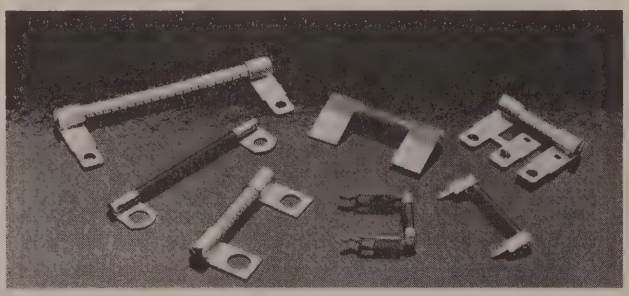
Wirewound Resistors: Commercial Power – Type CW & RU

Electronic and automotive industry standard sizes

Features:
- ☐ Economical, reliable resitors from 2 to 50 watts
- ☐ High quality, fireproof ceramic case and inorganic fill
- ☐ Custom inorganic encapsulant provides high thermal conductivity
- ☐ High quality alloy resistance wire on silicone coated and impregnated, interwoven, fiberglass core
- ☐ Brackets and standoffs available
- ☐ Fusistor styles available
- ☐ Formed leads to customer specification
- ☐ U.S. made

ALSO AVAILABLE: Moisture resistant, fireproof ceramic case and heat-treated, inorganic encapsulant with **silicone base.**

Specifications:
- ☐ Resistance range: .005 ohm min. to 13k (depending on core length)
- ☐ Tolerance: ±10% standard, down to ±2% also available
- ☐ Temperature coefficients: to 200 PPM, consult factory
- ☐ Power rating: 2-50 watts
- ☐ Terminals: brass, tinned brass, or tinned steel; axial lead or radial leads



Wire Wound Radial Terminals (Flag) – Type AW

Standard electronic and auto industry terminals

Features:
- ☐ Variety of terminal materials and styles
- ☐ High quality alloy resistance wire with silicone impregnated, interwoven fiberglass core
- ☐ Variety of temperature coefficients available
- ☐ Variety of core diameters & lengths
- ☐ Available coated or uncoated
- ☐ U.S. made

Specifications:
- ☐ Resistance range: to customer specifications
- ☐ Tolerance: ±10% standard, ±5% also available
- ☐ Temperature coefficients: to 300 PPM, consult factory
- ☐ Power rating: 4, 5, 6 watts per inch available
- ☐ Terminals: brass, tinned brass, or tinned steel, silicone base or epoxy coating available, resistance value stamped on terminal

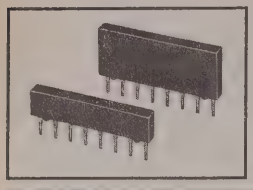
A COMPANY OF VISHAY DALE®

MODEL MSM
Thick Film Resistor Networks
Military, MIL-R-83401 Qualified, Type RZ
Single-In-Line, Molded - 01, 03, 05 Schematics



FEATURES
- MIL-R-83401 qualified
- .195" [4.95] "A" and .350" [8.89] "C" maximum seated heights
- Highly stable thick film
- T.C.R. available in "K" (± 100PPM/°C) or "M" (± 300PPM/°C) characteristic
- All device leads are hot-solder dipped
- Rugged molded case construction
- Compatible with automatic insertion equipment
- 100% screen tested per Group A, Subgroup 1 of MIL-R-83401
- All devices are capable of passing the MIL-STD-202, Method 210, Condition E "Resistance to Soldering Heat" test
- Available in tube pack

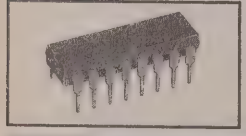
Tolerance: ± 2% standard. ± 1% and ± 5% available.
Temperature Coefficient: (- 55°C to + 125°C) "K" = ± 100PPM/°C, "M" = ± 300PPM/°C.
Resistor Power Rating: (Maximum at 70°C .2 watt) MSMXXA-01, MSMXXC-01 and MSMXXC-03 = .2 watt, MSMXXA-03 = .12 watt, MSMXXC-05 = .11 watt, MSMXXA-05 = .07 watt.
Package Power Rating: (Maximum at 70°C) MSM06A-01 = .60 watt, MSM06A-03 = .36 watt, MSM08A-01 = .84 watt, MSM08A-03 = .48 watt, MSM10A-01 = 1.08 watt, MSM10A-03 = .60 watt, MSM06C-01 = 1.00 watt, MSM06C-03 = .60 watt, MSM08C-01 = 1.40 watt, MSM08C-03 = .80 watt, MSM10C-01 = 1.80 watt, MSM10C-03 = 1.00 watt, MSM06A-05 = .56 watt, MSM06C-05 = .88 watt, MSM08A-05 = .84 watt, MSM08C-05 = 1.32 watt, MSM10A-05 = 1.12 watt, MSM10C-05 = 1.76 watt.
Maximum Operating Voltage: 50 VDC.
Operating Temperature Range: - 55°C to + 125°C.

MECHANICAL SPECIFICATIONS

Body: Molded epoxy.
Terminals: Copper alloy, hot-solder dipped.
Solderability: Per MIL-R-83401.
Weight: "A" Profile: 6 pin = .4 gram, 8 pin = .5 gram, 10 pin = .6 gram. "C" Profile: 6 pin = .7 gram, 8 pin = .9 gram, 10 pin = 1.1 gram.

A COMPANY OF VISHAY DALE®

MODELS MDM14 and MDM16
Thick Film Resistor Networks
Military, MIL-R-83401 Qualified, Type RZ
Dual-In-Line Package - 01, 03, 05 Schematics



FEATURES
- MIL-R-83401 Qualified
- Epoxy molded construction
- All device leads are hot-solder dipped
- 100% screen tested per Group A, Subgroup 1 of MIL-R-83401
- T.C.R. available in "K" (± 100PPM/°C) or "M" (± 300PPM/°C) depending on style
- All devices are capable of passing the MIL-STD-202, Method 210, Condition E "Resistance to Soldering Heat" test
- Available in tube pack

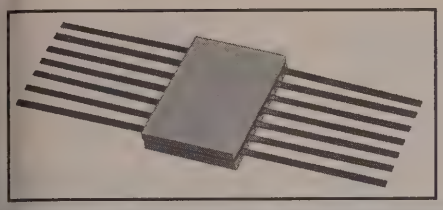
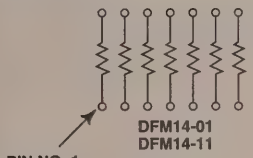
MODEL DFM14
Thick Film Resistor Networks
Military, MIL-R-83401 Qualified, Type RZ
01, 02, 05, 11, 12, 15 Schematics

A COMPANY OF VISHAY DALE®

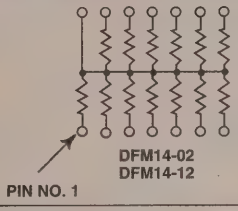


FEATURES
- 01, 02, 05 schematics - gold plated leads
- 11, 12, 15 schematics - hot solder dipped
- MIL-R-83401 qualified
- Highly stable thick film
- T.C.R. available in "K" (± 100PPM/°C) or "M" (± 300PPM/°C) characteristic
- 100% screen tested per Group A, Subgroup 1 of MIL-R-83401
- .065" [1.65] height for high density packaging
- All devices are capable of passing the MIL-STD-202, Method 210, Condition E "Resistance to Soldering Heat" test

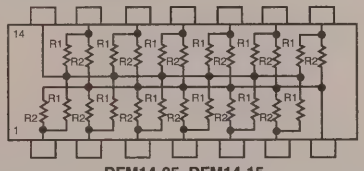
01, 11 Schematic



02, 12 Schematic



05, 15 Schematic

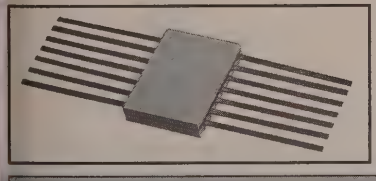


ELECTRICAL SPECIFICATIONS

Resistance Range: 01 and 02: 10 ohm to 1 Megohm. 05: Contact factory.
Tolerance: ± 2% standard. ± 1%, ± 5% available.
Temperature Coefficient: (- 55°C to + 125°C) "K" = ± 100PPM/°C. "M" = ± 300PPM/°C.
Isolation Resistance: 01, 11 = > 100 Megohm.
Resistor Power Rating: (Maximum at 70°C) 01, 11 = 0.050 watt. 02, 12 = 0.025 watt. 05, 15 = 0.015 watt.
Package Power Rating: (Maximum at 70°C) 01, 11 = 0.350 watt. 02, 12 = 0.325 watt. 05, 15 = 0.350 watt.
Maximum Operating Voltage: 50 VDC.
Operating Temperature Range: - 55°C to + 125°C.

MODELS DFP14 and DFP16
Thick Film Resistor Networks
Flat Pack, 01, 02, 11, 12 Schematics

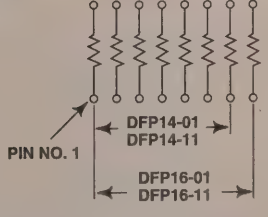
A COMPANY OF VISHAY DALE®



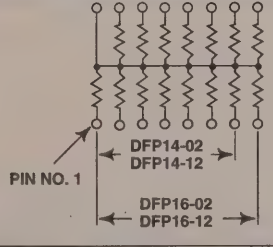
FEATURES
- 01 and 02 schematics - gold plated leads
- 11 and 12 schematics - tin-lead plated leads
- .065" [1.65] height for high density packaging
- Low temperature coefficient (- 55°C to +125°C) ± 100PPM/°C
- Hot-solder dipped or gold-plated leads
- Highly stable thick film
- Wide resistance range
- All devices are capable of passing the MIL-STD-202, Method 210, Condition E "Resistance to Soldering Heat" test

CIRCUITS

01, 11 Schematic



02, 12 Schematic



ELECTRICAL SPECIFICATIONS

Resistance Range: 10 ohm to 1 Megohm.
Tolerance: ± 2% standard. ± 1% and ± 5% available.
Temperature Coefficient: (- 55°C to + 125°C) ± 100PPM/°C typical.
Isolation Resistance: 01 and 11: >100 Megohm.
T.C. Tracking: (- 55°C to + 125°C) 50PPM/°C.
Resistor Power Rating: (Maximum at 25°C) 01, 11 = 0.25 watt. 02, 12 = 0.15 watt.
Package Power Rating: (Maximum at 25°C) 0.65 watt.
Voltage Coefficient of Resistance: < 50PPM/V typical.
Maximum Operating Voltage: 75 VDC.
Operating Temperature Range: - 55°C to + 125°C.
Storage Temperature Range: - 55°C to + 150°C.

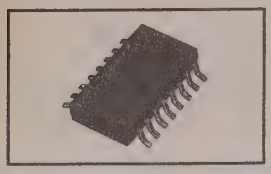
MODEL SOMC
Thick Film Resistor Networks
Dual-in-Line, Small Outline Molded Dip
01, 03, 05 Schematics - 14 or 16 Pins

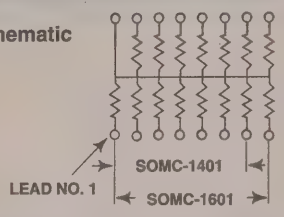
A COMPANY OF VISHAY DALE®



FEATURES
- .090" [2.29] maximum seated height
- Rugged, molded case construction
- Highly stable thick film
- .050" [1.27] lead spacing
- Low temperature coefficient, (- 55°C to + 125°C) ± 100PPM/°C
- Reduces total assembly costs
- Compatible with automatic surface mounting equipment
- Wide resistance range
- Uniform performance characteristics
- Meets EIA PDP100, SOGN-0002 outline dimensions
- Available in tube pack or tape and reel pack

CIRCUITS

01 Schematic



03 Schematic

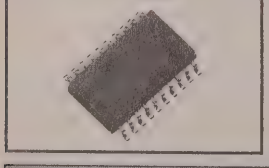
Temperature Coefficient: (- 55°C to + 125°C) ± 100PPM/°C typical.
Resistor Power Rating: (Maximum at 70°C) 01, 05 = .080 watt. 03 = .160 watt.
Package Power Rating: (Maximum at 70°C) 01, 05 = 14 pin 1.05 watts, 16 pin 1.200 watts. 03 = 14 pin 1.125 watts, 16 pin 1.280 watts.
T.C. Tracking: (- 55°C to + 125°C) 50PPM/°C.
Voltage Coefficient of Resistance: < 50PPM/V typical.
Maximum Operating Voltage: 50 VDC.
Operating Temperature Range: - 55°C to + 125°C.
Storage Temperature Range: - 55°C to + 150°C.

MODEL SOGC
Thick Film Resistor Networks
Dual-In-Line, Small Outline Molded Dip

A COMPANY OF VISHAY DALE®



FEATURES
- .110" [2.79] maximum seated height
- Rugged, molded case construction
- Highly stable thick film
- .050" [1.27] lead spacing
- Low temperature coefficient, (- 55°C to + 125°C) ± 100PPM/°C
- Reduces total assembly costs
- Compatible with automatic surface mounting equipment
- Wide resistance range
- Uniform performance characteristics
- Meets EIA PDP 100, SOGN-0003 outline dimensions
- Available in tube pack or tape and reel pack

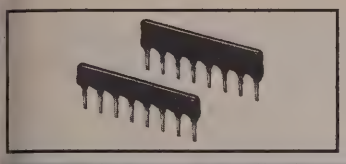
MODEL CSC
Thick Film Resistor Networks
Single-In-Line, Coated - 01, 03, 05 Schematics
4 thru 10 Pins "A" Profile, 4 thru 12 Pins "B" Profile



FEATURES
- .195" [4.95] "A" or .250" [6.35] "B" maximum seated height
- Highly stable thick film
- Low temperature coefficient (- 55°C to + 125°C) ± 100PPM/°C
- Reduces total assembly costs
- Resistor elements protected by tough epoxy conformal coating
- Wide resistance range
- Available in bag pack or tube pack

Storage Temperature Range: - 55°C to + 150°C.

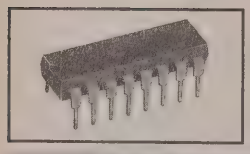
MODELS MDP16-45 and MDP16-46
Thick Film Resistor Networks
Dual-In-Line, Molded

A COMPANY OF VISHAY DALE®



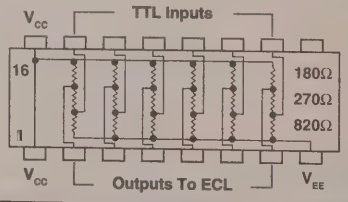
FEATURES
- .190" [4.83] maximum seated height
- Rugged, molded case construction
- Low temperature coefficient (- 55°C to + 125°C) MDP16-45: ± 100PPM/°C. MDP16-46: ± 250PPM/°C
- Compatible with automatic insertion equipment
- Highly stable thick film
- Reduces P.C. board space and total assembly costs
- Available in tube pack

CIRCUITS

-45 Schematic

TTL to ECL translator

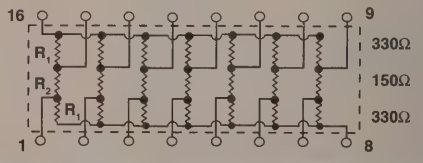
The MDP16-45 network consists of 18 resistors of 3 different values, internally divided into six (6) identical three (3) resistor sections for TTL to ECL translation.



-46 Schematic

SCSI-BUS signal terminator

The MDP16-46 network consists of 21 resistors of 2 different values, internally divided into seven (7) identical three (3) resistor sections for SCSI-BUS terminator applications.



ELECTRICAL SPECIFICATIONS

Resistance Values: MDP16-45: 180 ohm, 270 ohm and 820 ohm in each of six (6) sections. MDP16-46: 330 ohm, 150 ohm and 330 ohm in each of seven (7) sections.
Resistance Tolerance: MDP16-45: ± 2%. MDP16-46: ± 5%.
Resistance Temperature Coefficient: (- 55°C to + 125°C) MDP16-45: ± 100PPM/°C typical. MDP16-46: ± 250PPM/°C typical.
Temperature Coefficient of R Tracking: ± 150PPM/°C.
Resistor Power Rating: (Maximum at 25°C) .125 watt.
Package Power Rating: (Maximum at 25°C) 2.0 watts.
Voltage Coefficient of Resistance: < 50PPM/V typical.
Operating Temperature Range: - 55°C to + 125°C.
Storage Temperature Range: - 55°C to + 150°C.

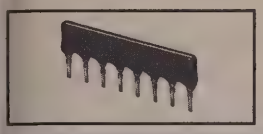
MODEL CSRC
Resistor/Capacitor Networks
Single-In-Line, Coated
ECL and Line Terminator Schematics

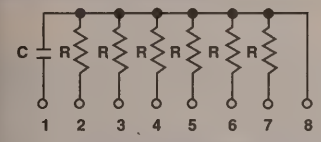
A COMPANY OF VISHAY DALE®



FEATURES
- Highly stable, thick film resistors, ± 150PPM/°C
- X7R type capacitor for ECL terminator
- NPO or X7R capacitors for line terminator
- Wide operating temperature range, - 55°C to + 125°C

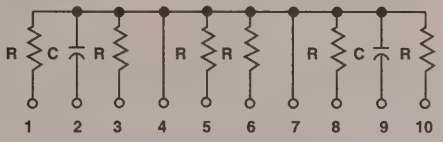
CIRCUITS

CSRC-08B20 Schematic



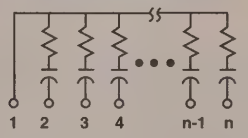
The CSRC-08B20 single-in-line 10k ECL terminator network is used for decoupling and line termination in systems using 10k ECL logic.

CSRC-10B21 Schematic



The CSRC-10B21 single-in-line 100k ECL terminator network is used for decoupling and line termination in systems using 100k ECL logic.

CSRC-XXC30 Schematic



The CSRC-XXC30 single-in-line terminator network is used for line termination and is available in 6, 7, 8, 9, 10, 11 and 12 pin sizes.

RESISTOR SPECIFICATIONS

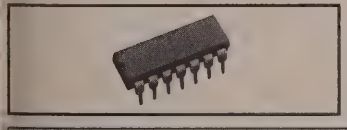
Resistance Range: CSRC-08B20, CSRC-10B21 = 50 ohm, 68 ohm, 100 ohm, 150 ohm. CSRC-XXC30 = 50 ohm to 1 kilohm.
Tolerance: ± 5% standard. ± 2% available.
Temperature Coefficient: (- 55°C to + 125°C) ± 150PPM/°C.
Operating Voltage: CSRC-08B20, CSRC-10B21 = 8 VDC maximum. CSRC-XXC30 = 50 VDC maximum.

CAPACITOR SPECIFICATIONS

Model: CSRC = 08B20, CSRC-10B21 = X7R. CSRC-XXC30 = NPO or X7R.
Standard Values: CSRC-08B20, CSRC-10B21 = .01 µf. CSRC XXC30: NPO type = 56 pf, 100 pf, 220 pf, 470 pf. X7R type = 1000 pf, .01 µf.
Tolerance: CSRC-08B20, CSRC-10B21 = 20% standard. CSRC-XXC30, NPO type = ± 10%, X7R type = ± 20%.
Voltage Rating: CSRC-08B20, CSRC-10B21 = 25 VDC. CSRC-XXC30 = 50 VDC.

MODEL MDRC
Resistor/Capacitor Networks
Dual-In-Line, Molded, 16 Pin

A COMPANY OF VISHAY DALE®



FEATURES
- .190" [4.83] maximum seated height
- Rugged molded case construction
- Highly stable thick film
- Reduces total assembly cost
- Low temperature coefficient (-30°C to + 85°C) ± 100PPM/°C
- Compatible with automatic insertion equipment
- Reduces P.C. board space

CIRCUITS

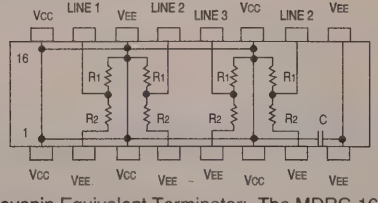
MDRC-1641 Schematic

- 2.0 Volt ECL Terminator: The MDRC-1641 circuit contains 11 resistors of nominally equal value and a .01 microfarad decoupling capacitor.

MDRC-1642 Schematic

- 5.2 Volt ECL Terminator: The MDRC-1642 circuit contains 12 resistors of 510 ohm each and a .01 microfarad decoupling capacitor.

MDRC-1643 Schematic



Thevenin Equivalent Terminator: The MDRC-1643 contains four pairs of series resistors. The circuit is compatible with ECL pin configurations.

ELECTRICAL SPECIFICATIONS

Tolerance: ± 2% or 2 ohm, whichever is greater.
Capacitor Tolerance: .01 microfarad + 40%, - 20%.
Capacitor Voltage Rating: 25 volts maximum.
Capacitor Dissipation Factor: < 3%.
Resistance Temperature Coefficient: (- 30°C to + 85°C) ± 100PPM typical.
Resistor Power Rating: (Maximum at 25°C) MDRC-1641, MDRC-1642 = .15 watt. MDRC-1643 = .20 watt.
Package Power Rating: 2.0 watt maximum at 25°C.
Temperature Coefficient of R Tracking: ± 50PPM/°C.
Voltage Coefficient of Resistance: < 50PPM/V typical.
Operating Temperature Range: - 30°C to + 85°C.
Storage Temperature Range: - 30°C to + 85°C.

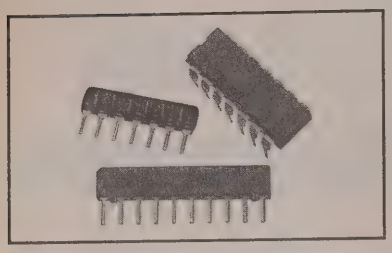
CUSTOM NETWORKS
DIPS, Molded SIPS, Coated SIPS

A COMPANY OF VISHAY DALE®

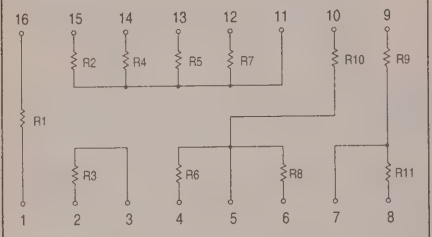


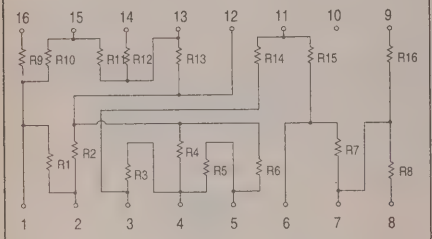
FEATURES

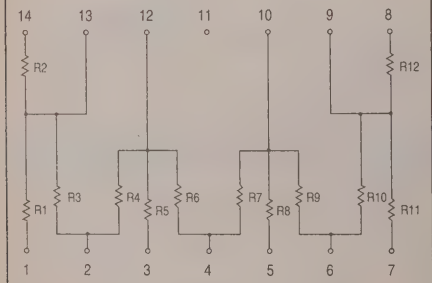
- Fast turnaround time
- Unlimited schematics possible
- Design through production
- Processed to MIL-R-83401
- High temperature solder joints
- Made in the U.S.A.
- Wide resistance range
- Ultra high precision laser trimming
- Double sided printing and through holes/VIAs
- High density circuit designs
- Tighter parameters available
- High power ratings available
- Custom resistor, capacitor, diode and inductor network combinations

SCHEMATICS

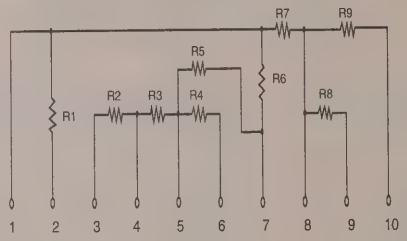
DIPS

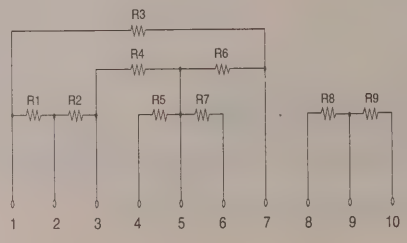


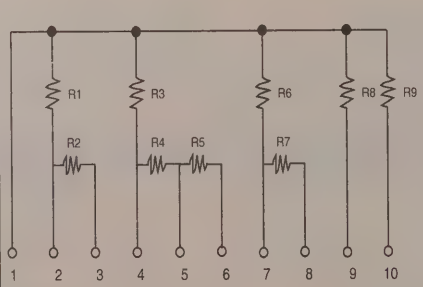




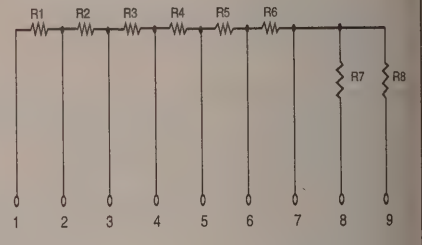
SIPS, Molded

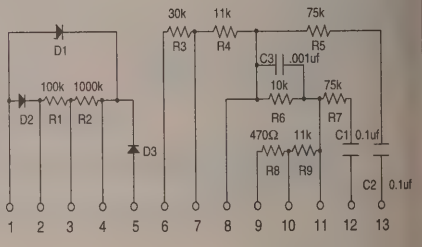


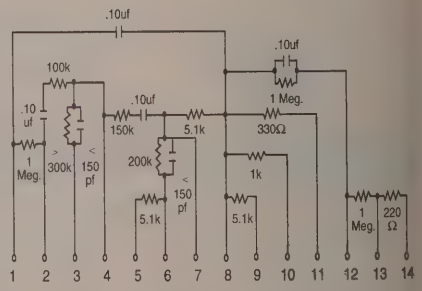




SIPS, Coated







ELECTRICAL SPECIFICATIONS

Resistance Range: 1 ohm to 20 Megohm.
Tolerance: ± 0.5%. Tighter tolerances available.
Temperature Coefficient: ± 50PPM/°C available.
T. C. R. Tracking: ± 50PPM/°C available.
Ratio Matching: ± 0.5% available.
Power Per Resistor: 1/8 watt @ 70°C typical.

MECHANICAL SPECIFICATIONS

Resistive Element: Thick film.
Solder Joints: High temperature SN10.
Encapsulation: Phthalate for molded. Epoxy for conformal coated.
Lead Lengths: .060" [1.52] to .190" [4.83] molded, .060" [1.52] to .290" [7.37] coated.
Substrates: 96% Alumina. Thicknesses: .020" [.508] to .100" [2.54].
Resistor Coatings: Glass passivation, dielectrics for crossovers.

ENVIRONMENTAL SPECIFICATIONS

Temperature Limits: - 65°C to + 125°C.

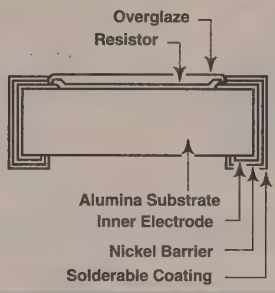
MODEL TNPW
Thin Film Chip Resistors
Industrial, Precision

A COMPANY OF VISHAY DALE®

FEATURES
- Internationally standardized size
- Automatic placement compatibility
- Reflow solderable
- Thin film resistance element
- Wraparound termination
- Inner electrode protection
- 8mm reel or bulk packaging
- Operating temperature range is - 55°C to + 125°C



STANDARD ELECTRICAL SPECIFICATIONS

MODEL	RESISTANCE TEMPERATURE COEFFICIENT	RESISTANCE RANGE (Ohms)	TOLERANCE	MAXIMUM OPERATING VOLTAGE	POWER RATING @ 70°C

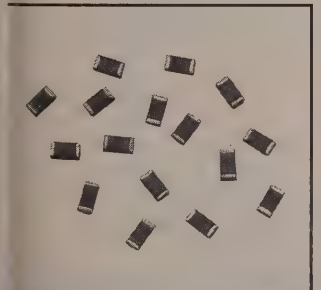
MODEL TNPWM
Thin Film Chip Resistors
Military/Established Reliability
MIL-R-55342/7 Qualified, Type RM, Precision

A COMPANY OF VISHAY DALE®



FEATURES
- Internationally standardized size
- Meets requirements of MIL-R-55342
- Established Reliability - Verified failure rate (contact factory)
- 8mm reel, tray or bulk packaging
- Flow solderable • 100% screen tested • Inner electrode protection
- Thin film resistance element and wraparound termination
- Automatic placement compatibility
- Operating temperature range is - 55°C to + 150°C
- Power rating at 70°C is .125 W
- Maximum operating voltage is 100 V
- Termination material is pretinned nickel barrier wraparound

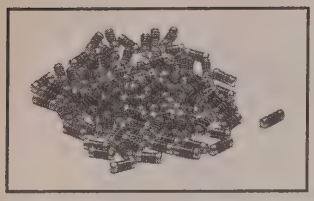
MODEL SMM0204
Cylindrical Thin Film Chip Resistors
Industrial, Precision

A COMPANY OF VISHAY DALE®



FEATURES

- Cylindrical, leadless body style (MELF)
- Automatic placement compatibility
- Reflow and wave solderable
- Thin film resistance element
- Solderable end cap construction
- Color band marking
- 8mm tape width reel or bulk packaging
- Maximum operating voltage is 200V
- Power rating at 70°C is 0.25W

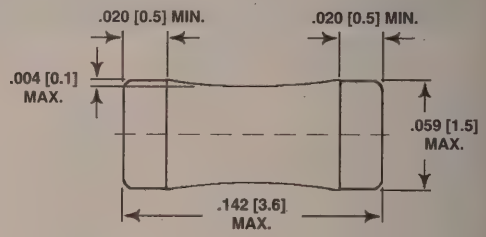
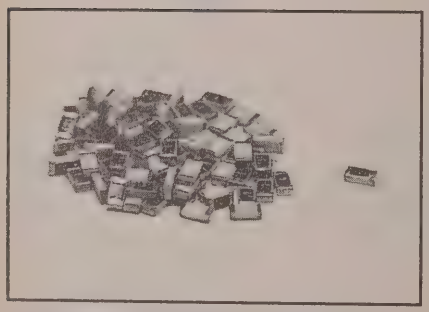
DIMENSIONAL CONFIGURATIONS

[Numbers in brackets indicate millimeters]



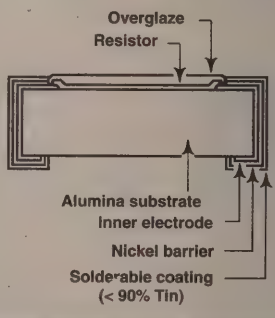
MODEL CRCW0603
Thick Film Chip Resistors
Industrial

A COMPANY OF VISHAY DALE®



FEATURES

- Internationally standardized size
- Automatic placement compatibility
- Flow solderable
- Inner electrode protection
- Thick film resistance element
- Wraparound termination
- Standard resistance values = E-24
- Operating temperature range is - 55°C to + 125°C



ELECTRICAL SPECIFICATIONS

Maximum RCWV: 50 V. Rated continuous working voltage (RCWV) shall be determined from RCWV = The square root of Rated Power x Resistance Value or from maximum RCWV (50 V) whichever is less.

Resistance Range: 10 ohm to 1 Megohm.

Resistance Tolerance: 1%, 5%.

Power Rating at 70°C: 1/16 watt.

Maximum Overload Voltage: 100 V.

Dielectric Withstanding Voltage: 200 V.

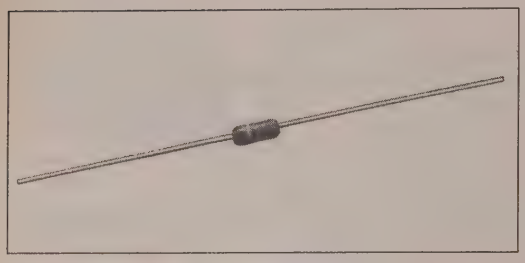
MODEL CCF-07
Metal Film Resistors
Industrial, 2% and 5% Tolerance

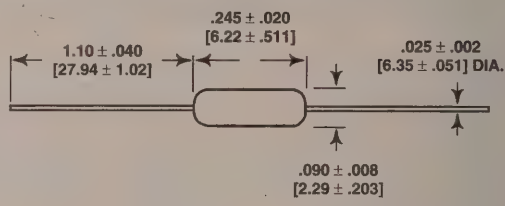
A COMPANY OF VISHAY DALE®



FEATURES
- 1/4 watt at 70°C power rating
- 2% and 5% tolerance
- 100PPM/°C and 200PPM/°C temperature coefficient
- Flame retardant epoxy conformal coating
- Standard 4 band color code marking for ease of identification after mounting
- Tape and reel packaging for automatic insertion. Meets EIA 296-E, Class I.

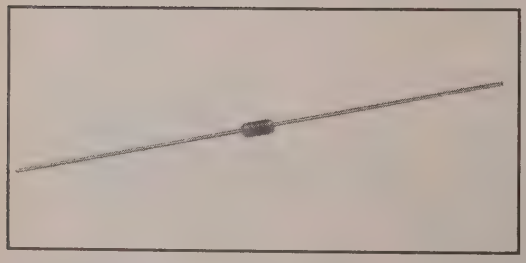
ELECTRICAL SPECIFICATIONS
Resistance Range:
10 ohm to 1 Megohm for ± 2% tolerance.
10 ohm to 2 Megohm for ± 5% tolerance.
Resistance Tolerance: ± 2%, ± 5%.
T. C.: (- 65°C to + 150°C).
± 100PPM/°C for 2% tolerance.
± 200PPM/°C for 5% tolerance.
Power Rating: 1/4 watt at + 70°C.
Maximum Working Voltage: 250 V RMS.
Insulation Resistance: 10,000 Megohm.
Operating Temperature Range: - 65°C to + 150°C.

DIMENSIONAL CONFIGURATIONS
[Numbers in brackets indicate millimeters]



MODELS CCF-50, CCF-55, CCF-60
Metal Film Resistors
Industrial, 1% Tolerance

A COMPANY OF VISHAY DALE®



FEATURES
- Power Ratings: 1/4 and 1/2 watt at 70°C
- 100PPM/°C temperature coefficient
- Superior electrical performance
- Flame retardant epoxy conformal coating
- Standard 5 band color code marking for ease of identification after mounting
- Tape and reel packaging for automatic insertion. Meets EIA 296-E, Class I.

ELECTRICAL SPECIFICATIONS
Resistance Range: 10 ohm to 1 Megohm.
Resistance Tolerance: ± 1%.
T. C.: (- 65°C to + 165°C) ± 100PPM/°C.
Power Rating at 70°C:
CCF-50 = 1/4 watt.
CCF-55 = 1/4 watt, 1/2 watt.
CCF-60 = 1/2 watt, 3/4 watt.
Maximum Working Voltage:
200 V RMS for CCF-50.
250 V RMS for CCF-55.
350 V RMS for CCF-60.
Insulation Resistance: 10,000 Megohm.
Operating Temperature Range: - 65°C to + 165°C.

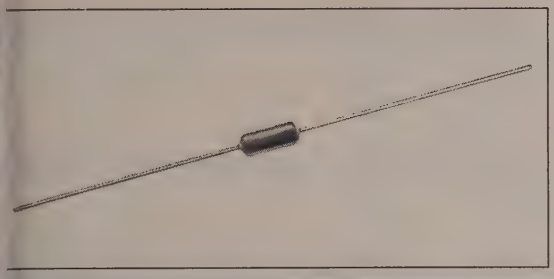
MODEL PTF
Metal Film Resistors
Industrial, Precision
Low T.C. - Tight Tolerance

A COMPANY OF VISHAY DALE®



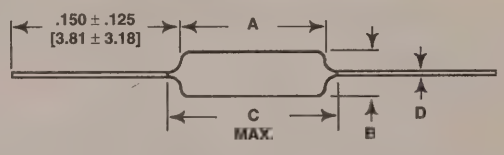
FEATURES
- Extremely low temperature coefficients of resistance
- Standard T. C.: T-10, ± 15PPM/°C. T-13, ± 10PPM/°C. T-16, ± 5PPM/°C.
- Very low noise and voltage coefficient
- Wide precision resistance range in small package
- 100% laser spiralled
- Very good high frequency characteristics
- Acceptance testing available
- Proprietary epoxy coating provides superior moisture protection
- Can replace wirewound bobbins

STANDARD ELECTRICAL SPECIFICATIONS

MODEL	85°C RATING	MAXIMUM WEIGHT (Grams)	MAXIMUM WORKING VOLTAGE	RESISTANCE RANGE (Ohms)	AVAILABLE TOLERANCE RANGE
PTF-51	1/20 W	.11	200	50-100k	± 1% to ± 0.02%
PTF-56	1/8 W	.35	300	50-500k	± 1% to ± 0.01%
PTF-65	1/4 W	.75	500	50-1M	± 1% to ± 0.05%

MATERIAL SPECIFICATIONS
Element: Precision deposited nickel-chrome alloy with controlled annealing
Core: Fire-cleaned high purity ceramic
Encapsulant: Specially formulated epoxy compounds. Coated construction.
Termination: Standard lead material is solder-coated copper. Solderable and weldable per MIL-STD-1276, Type C.

DIMENSIONAL SPECIFICATIONS
[Numbers in brackets indicate millimeters]



MODEL	A	B	C (Max.)	D
PTF-51	.150 ± .020 [3.81 ± .508]	.070 ± .010 [1.78 ± .254]	.200 [5.08]	.016 [.406]

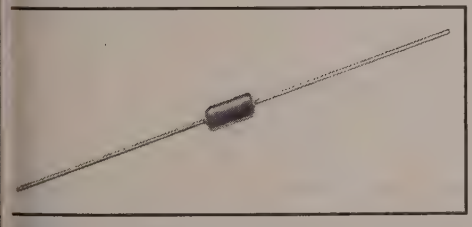
MODEL CMH-55-100
Metal Film Resistors
Industrial, High Value

A COMPANY OF VISHAY DALE®



FEATURES
- 1/4 watt at 70°C power rating
- ± 0.5%, ± 1%, ± 2% tolerance
- Tape & reel packaging for automatic insertion available. Meets EIA 296-E.
- Non decade values available
- Flame retardant epoxy conformal coating
- Small dimensional size to value ratio
- 50PPM/°C and 100PPM/°C temperature coefficients

ELECTRICAL SPECIFICATIONS
Resistance Range: 5.01MΩ thru 15MΩ.
Resistance Tolerance:
5.01MΩ - 10MΩ = ± 0.5%, ± 1%, ± 2%. 10.1MΩ - 15MΩ = ± 1%, ± 2%.
Temperature Coefficient: (- 20°C to + 125°C). 5.01MΩ -10MΩ = 0 ± 50PPM/°C, 0 ± 100PPM/°C. 10.1MΩ - 15MΩ = 0 ± 100PPM/°C.
Power Rating: Limited by maximum working voltage.
Maximum Working Voltage: 250 V RMS.
Insulation Resistance: 10,000 Megohm minimum.
Operating Temperature Range: - 65°C to + 165°C.

DIMENSIONAL CONFIGURATIONS
[Numbers in brackets indicate millimeters]

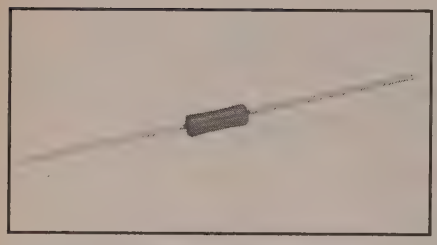
MODEL CPF
Metal Film Resistors
Industrial, Power, Flameproof

A COMPANY OF VISHAY DALE®



FEATURES
- High power rating, small size
- Flameproof, high temp. coating
- Special filming and coating processes
- Low noise
- Low voltage coefficient
- Excellent high frequency characteristics

STANDARD ELECTRICAL SPECIFICATIONS

MODEL	WATTAGE RATING (70°C)	VOLTAGE RATING	RESISTANCE RANGE 1% AND ABOVE (Ohms)
CPF-1	1	250 W	0.1-150k
CPF-2	2	350 W	0.1-150k
CPF-3	3	500 W	0.1-150k

Contact factory for resistance range in precision tolerance.

ELECTRICAL SPECIFICATIONS
Resistance Tolerance: .1%, .25%, .5%, 1%, 5%.
T. C.: (-55°C to +125°C) ±100PPM/°C, ±50PPM/°C, ±25PPM/°C.
Dielectric Strength: 900 VAC.
Insulation Resistance: 10,000 Megohm minimum.
Operating Temperature Range: - 65°C to + 230°C.

MATERIAL SPECIFICATIONS
Element: Proprietary nickel-chrome alloy.
Core: Fire-cleaned high purity ceramic.
Coating: Special high temperature conformal coat.
Termination: Standard lead material is solder-coated copper. Solderable and weldable per MIL-STD-1276, Type "C".

MECHANICAL SPECIFICATIONS
Terminal Strength: 2 pound pull test.
Solderability: Continuous satisfactory coverage when tested in accordance with MIL-STD-202, Method 208.

DIMENSIONAL CONFIGURATIONS

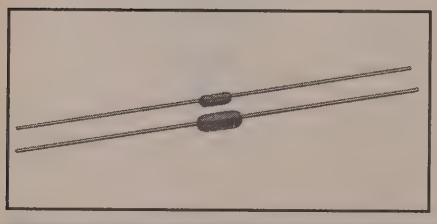
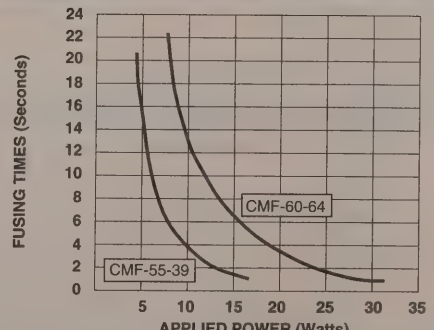
MODELS CMF-55-39 and CMF-60-64
Metal Film Resistors
Special Purpose, Fusible, Flameproof

A COMPANY OF VISHAY DALE®



FEATURES
- Fusible - Circuit protection in case of other component failure
- Flameproof - Meets EIA RS-325, will not flame when overloaded
- Special filming and coating processes

FUSIBLE, FLAMEPROOF (Typical Fusing Times)



ELECTRICAL SPECIFICATIONS
Resistance Range: 5 ohm to 10 kilohm
Resistance Tolerance: ± 1%
T. C.: (- 65°C to + 165°C) ± 100PPM/°C
Power Rating: CMF-55-39 = 1/4 watt and CMF-60-64 = 1/2 watt at + 70°C (Derate linearly from rated power at + 70°C to zero power at + 165°C)
Maximum Flame Test Voltage:
CMF-55-39 = 350 V RMS or DC
CMF-60-64 = 500 V RMS or DC
Insulation Resistance: 10,000 Megohm
Operating Temperature Range: - 65°C to + 165°C

MODELS HN, HS, HT, HY
Metal Film Resistors
Military/Established Reliability, MIL-R-55182 Qualified
Type RNR and RNN, Hermetically Sealed

A COMPANY OF VISHAY DALE®

FEATURES

- Qualified to MIL-R-55182 Characteristics C and E
- Terminal Type RNR shall be used as a substitute for RNC for Characteristics C and E
- Performance exceeds requirements of MIL-R-55182
- Excellent high frequency performance and long term stability
- Hermetic glass enclosure is impervious to harmful environments
- Inert gas filled, very low noise and high reliability

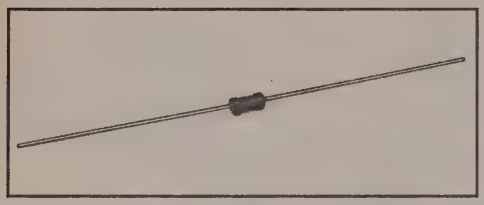
MODEL RNX
Metal Oxide Resistors
High Voltage, Special Purpose

A COMPANY OF VISHAY DALE®



FEATURES

- For oil bath or open air operation
- Low T.C.: ± 200PPM/°C standard. ± 100PPM/°C, ± 50PPM/°C available.
- Tolerance: ± 1% standard to 1 Gigohm. ± 5% above 1 Gigohm. ± 0.5% available in 50PPM/°C only. Special tolerances and/or T.C. matching available upon request.

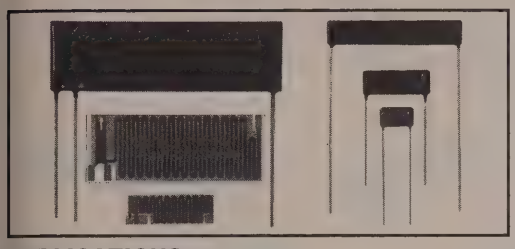
MODELS TR and TD
Thick Film Resistors and Dividers
Special Purpose, High Voltage

A COMPANY OF VISHAY DALE®



FEATURES
- 0.25 watt to 3.0 watt at + 25°C
- Outstanding stability under adverse conditions
- Stable cermet resistive element bonded to a high-purity alumina substrate
- Tough epoxy-based coating and high voltage stability
- Designs built from customer supplied schematics
- Dividers available leaded or non-leaded
- Typical resistance ratios of 1000:1, 2000:1, etc.
- TCR tracking to ± 10PPM/°C depending on values
- Typical thickness of .055" [1.40] for space preservation

APPLICATIONS
Applications include power supplies, transformers and any application requiring operation within an environment where high voltages are used.

ELECTRICAL SPECIFICATIONS
Resistance Range: 500 ohm to 1000 Megohm.
Resistance Tolerance: ± 1% to ± 20% standard.
Ratio Tolerance: 0.25% to 5% standard.
Temperature Coefficient: < 200PPM/°C; Ratio T. C. to 5PPM/°C.
Maximum Voltage: 25,000 volts.
Insulation Resistance: 10,000 Megohm minimum.
Voltage Coefficient: 2PPM/°C per volt standard, tighter available.
Dielectric Strength: 5,000 volts, $\Delta \leq \pm 1\%$.
Moisture Resistance: 0.5%, 240 hour test.
Load Life: 0.5%, 1000 hours at rated power.

MECHANICAL SPECIFICATIONS
Resistive Element: Thick film.
Substrate: 96% pure alumina.
Encapsulation: Epoxy base, conformal coating.
Terminals: 60/40 solder coated copper.
Terminal Strength: 4.5 pounds for 30 seconds.
Power: Derated from ambient temperature + 25°C.

ENVIRONMENTAL SPECIFICATIONS
Temp. Range: - 55°C to + 125°C for resistors, to + 150°C for dividers.
Thermal Shock: .25% (5 cycles, - 55°C to + 125°C).

STANDARD ELECTRICAL SPECIFICATIONS

MODEL WSC
Wirewound Resistors
Precision Power, Surface Mount

A COMPANY OF VISHAY DALE®

FEATURES
- Molded epoxy encapsulation
- Available in non-inductive styles with Aryton-Perry windings for lowest reactive components

STANDARD ELECTRICAL SPECIFICATIONS

MODEL	POWER RATING	RESISTANCE RANGE (Ohms) ± .5%, ± 1%, ± 3%, ± 5%
WSC-1/2	1/2 W	.05-1.41k
WSC-1	1 W	.05-2.77k
WSC-2	2 W	.005-10.4k

ELECTRICAL & MATERIAL SPECIFICATIONS

Resistance Tolerance: ± .5%, ± 1%, ± 3%, ± 5%.
Temperature Coefficient: (Below 0.1Ω, call factory.)
± 90PPM/°C, 0.1Ω - 0.99Ω.
± 50PPM/°C, 1.0Ω - 9.9Ω.
± 20PPM/°C, 10Ω and up.
Dielectric Strength: 500 VAC.
Insulation Resistance: 1000 MΩ minimum dry, 100 MΩ after moisture test.
Short Time Overload: 5 seconds at 5 times rated power.
Solderability: 60/40 electro tin plated terminals to facilitate soldering.
Element: Copper-nickel or nickel-chrome alloy (depends on resistance value).
End Caps: Nickel silver alloy.
Molding: Epoxy encapsulation.
Standard Terminals: Tinned copper alloy.

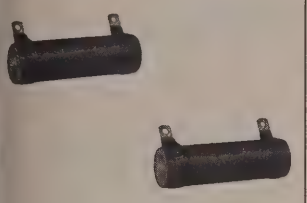
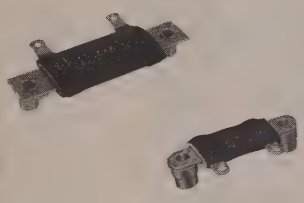
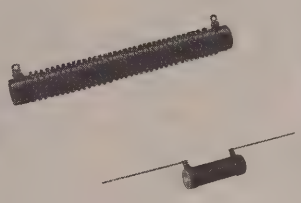
MODELS HL, NHL, HLx Wirewound Resistors

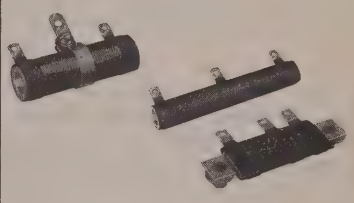
Industrial Power

A COMPANY OF VISHAY DALE®

Tubular: MODEL HL MODEL NHL (Non-Inductive)	Flat: MODEL HL MODEL HLM, Miniature	Edgewound: MODEL HLZ Tubular: MODEL HLW	Adjustable: MODEL HLA Tapped: MODEL HLT
			








APPLICATIONS - HL (Tubular)

Dale® HL resistors for inexpensively dissipating larger amounts of power in DC or low frequency AC circuits.

Special applications include grid resistors, voltage dropping resistors, high voltage bleeder resistors in power supplies, bias supply resistors, voltage divider networks, filament dropping resistors, load resistors, shunt resistors.

APPLICATIONS - NHL (Non-Inductive, Tubular)

Dummy antennas, terminating resistors, any resistance function where low effective inductance is needed.

Dale NHL resistors utilize Aryton-Perry winding (two single-layer parallel windings in opposite directions) to cancel most of the inductive effects.

Note: NHL resistors utilize the same cores, terminals and mounting hardware as HL models. However, resistance values are lower because of spacing allowances which must be made in the Aryton-Perry winding.

FEATURES - HL (Flat)

High power-to-size ratio. Mounting accommodations ideally suited to high density packaging. Self-stacking hardware for horizontal or vertical placement. Withstands high vibration without loosening. Mountings function as heat sinks allowing greater heat dissipation and less derating of stacked units.

EXCLUSIVE BRACKET DESIGN FOR HLM

Mounting strap fits snugly through core and is bound tightly against unit by two eccentric spacers. Eliminates expensive replacements and improves heat transfer and power handling capabilities. (Patent 3390367)

FEATURES - HLZ (Edgewound)

Designed to meet heavy-duty requirements where space is at a premium. High thermal capacity for intermittent or short duration. Silicone coating allows maximum heat transfer from wire surface.

Resistance Tolerance: ± 10% standard. ± 5% available.

Dielectric Strength: 1000 V terminals to mounting hardware.

Temperature Rise: 375°C at full power. Slightly higher temperatures will occur in maximum resistance units.

Construction: A ribbon element is edgewound onto a ceramic tube and is coated with silicone. Silicone coating holds ribbon wire firmly against core while allowing maximum exposure of wire surface for heat transfer by radiation and convection.

FEATURES - HLW (Tubular)

Resistance Tolerance: 5% tolerance standard 1 ohm and above. 10% below 1 ohm. Lower tolerances available.

Construction: Identical to Model HL, but with lug-attached leads to facilitate direct electrical connection by soldering.

FEATURES - HLA (Adjustable)

Adjustable resistor or voltage divider. Resistor can be used to quickly obtain odd resistance values. Resistor can be used as multi-tap resistor. One or more adjustable lugs can be provided for voltage-divider applications.

Tolerance: The standard tolerance on the total resistance is ± 5% and is checked with the adjustable terminal removed from the unit, in accordance with MIL-R-19365C.

Wattage Rating: To avoid overloading any section of an adjustable resistor, do not exceed the maximum rated current based on total resistance. The wattage ratings shown on the chart apply only when the entire resistance is in the circuit. The adjustable lug divides the wattage rating in proportion to the divided resistance.

FEATURES HLT (Tapped)

Provides fixed taps for voltage dividers.

Tolerance: ± 10% Standard tolerance for the total resistance.

Power Rating & Maximum Resistance: The winding space is slightly reduced by the additional terminals, resulting in a small reduction of power rating and maximum resistance. Consult the factory for information on specific applications. To insure proper resistor design, the power rating for each section must be specified.

Moving Adjustable Lugs: The coatings protect the resistance wire from shifting and shorting to other turns during adjustment. However, the following three steps should always be taken whenever adjustments are made: (1) Turn off current to avoid possible operator injury and damage to the unit. (2) Loosen adjustable lug until it will slide completely free, without touching the exposed wire. (3) When adjustment point has been selected, retighten lug only enough to assure a firm contact, do not tighten beyond this point. Failure to follow these three steps in order can result in damage to the resistor.

COMMERCIAL, POWER Wirewound Resistors

Axial Lead, Vertical Mount, Four Lead Radial Terminals, Surface Mount

A COMPANY OF VISHAY DALE®

	**MODEL CPW** **Wirewound Resistors** Commercial, Power, Axial Lead, Fireproof Inorganic Construction, High Surge Capabilities, Non-inductive Models Available	**ELECTRICAL SPECIFICATIONS** **Resistance Tolerance:** ± 1%, ± 2%, ± 3%, ± 5%. **Resistance Range:** .1Ω to 45kΩ. **T.C.:** Below 9.9Ω, ± 50PPM/°C. 10Ω & up, ± 30PPM/°C. **Maximum Working Voltage:** $\sqrt{PR}$. **Operating Temperature:** - 55°C to + 275°C. **Wattage Rating:** 2, 3, 5, 7, 10, 15 and 20.

COMMERCIAL, POWER Wirewound Fuse Resistors

Axial Lead, Radial Terminals Custom Designed Molded Models Available

A COMPANY OF VISHAY DALE®

	MODEL CA-(X)F **Wirewound** **Fuse Resistors** Commercial, Power, Axial Lead, Multiple Physical Configurations Available	**ELECTRICAL SPECIFICATIONS** **Resistance Tolerance:** ± 10% std. ± 5% available. **Maximum Working Voltage:** $\sqrt{PR}$. **Power Rating:** Model 4000, 4 watts per inch. Note: Generally standard processed units will fuse before 60 seconds when subjected to 12 x rated power minimum. By combining special alloys, materials and other techniques, faster fusing times may be accomplished. **Applications:** Kitchen appliances, automotive and entertainment devices, computers and power supplies.
	**MODEL CP-(X)F** **Wirewound** **Fuse Resistors** Commercial, Power, Axial Lead, Fireproof Inorganic Construction, Multiple Physical Configurations Available	**ELECTRICAL SPECIFICATIONS** **Resistance Tolerance:** ± 5% minimum. **Resistance Range:** .05Ω to 1200Ω. **Operating Temperature:** - 55°C to + 275°C. **Terminal Strength:** 7 pound pull test. **Wattage Rating at 25°C:** 2, 3, 5, 7, 10, 15, 20 and 22. Note: Generally standard processed units will fuse before 60 seconds when subjected to 15 x rated power minimum. By combining special alloys, materials and other techniques, faster fusing times may be accomplished.
	MODEL CPR-(X)F **Wirewound** **Fuse Resistors** Commercial, Power, Circuit Board Lock-In Mounting Tabs, Radial Terminals, Multiple Phyical Configurations Available	**ELECTRICAL SPECIFICATIONS** **Resistance Tolerance:** ± 5% minmum. **Resistance Range:** .1Ω to 1100Ω. **Operating Temperature:** - 55°C to + 275°C. **Terminal Strength:** 7 pound pull test. **Wattage Rating at 25°C:** 5, 7, 10, 15 and 20. Note: Generally standard processed units will fuse before 60 seconds when subjected to 15 x rated power minimum. By combining special alloys, materials and other techniques, faster fusing times may be accomplished.
	**MODEL RS-1F** **Wirewound** **Fuse Resistors** High Temperature Silicone Molded, Low T. C., Fast Acting, Custom Designed For Your Application	**ELECTRICAL SPECIFICATIONS** **Resistance Tolerance:** ± 3%, ± 5% ± 10%. **Resistance Range:** .12Ω to 500Ω. **T.C.:** ±50PPM/°C, 1Ω thru 9.9Ω. ±30PPM/°C, 10Ω & up. **Power Rating:** 1.0 watt std. Higher ratings available. **Dielectric Strength:** 750 VAC. **Fusing Times:** 1 millsecond to 1 second. **Minimum Fusing Current:** Approximately 4 times the continuous operating current obtainable on some designs. Larger ratios produce better designs.

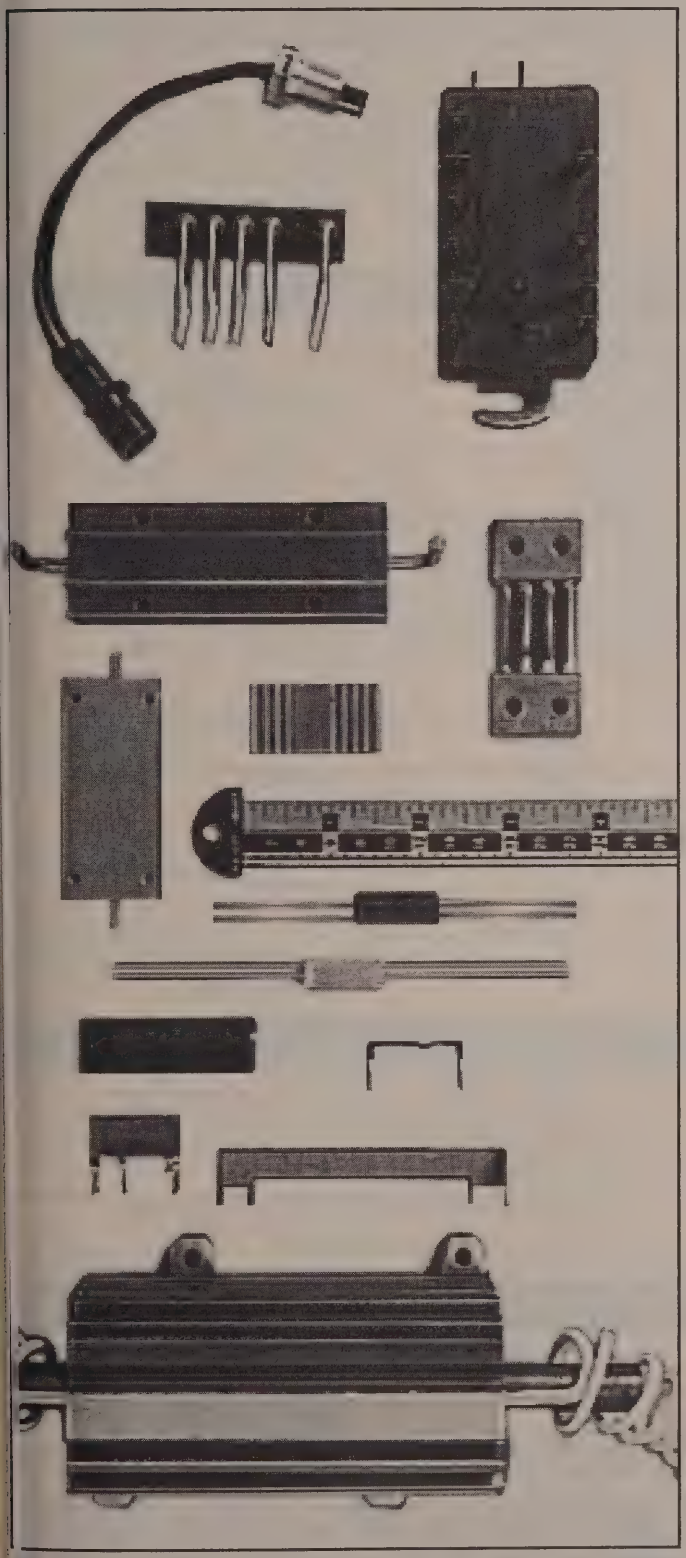
SPECIAL PURPOSE Wirewound Resistors

Engineered to Your Special Requirements

A COMPANY OF VISHAY DALE®



The photo at left illustrates only a few of the many special purpose wirewound resistors built by the Dale Special Products Section in the Wirewound Division.

Full-time engineers assigned to this section draw on the industry's largest file of non-standard resistor design and production information. Often, in a matter of minutes, these engineers determine a fast, practical route to the production of your non-standard part.

The list below shows some of the options and combinations which can be achieved:

WIREWOUND OPTIONS

Construction: Heat sink, silicone coated, epoxy or silicone molded (single or multi-element), hermetic seal (ceramic tube or metal can encapsulated), clip mounted or fireproof inorganic construction.

Leads: Radial and axial type, special materials and dimensions, spaded, threaded, insulated, quick-disconnect eyelet, printed circuit, ferrule.

Matching: T. C. by pairs, value and set, close tolerance, resistance ratio.

Special Types: Extended low or high resistance range, adjustable, low reactance, special wire alloys, very low or high T. C., high stability, special tolerances, tapped, water cooled, temperature sensitive, inductive.

Pre-conditioning: Power aging, temperature cycling, temperature and power, short-time overload, thermal shock, X-ray, temperature aging.

Shunts: Low value, 4-terminal resistors built to customer specifications or designed by our engineers to meet your current sensing requirements.

Fuse Resistors: Our hybrid components designed to act as an ordinary resistor under normal circuit conditions, and as a fuse under fault conditions. Dale offers a variety of standard types, physical sizes and basic styles. Each application should be referred to Dale for an individual design to insure optimum performance in any particular circuit. See our special pages on fuse resistors.

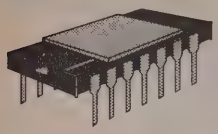
PRECISION THIN - FILM RESISTOR



HERMETIC DIP

MOLDED SIP

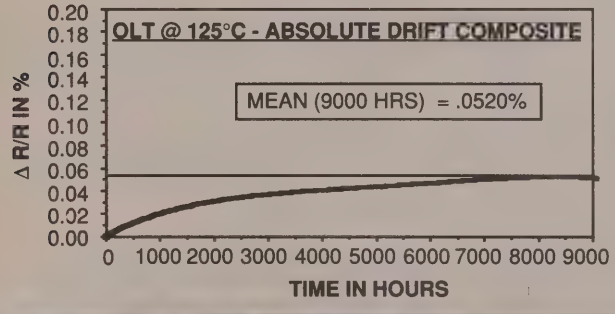
COATED SIP

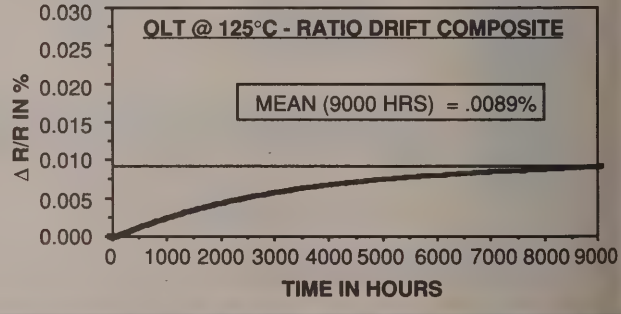
SOIC 
Electro - Films Inc. is a leading supplier of thin-film resistive components offering the broadest line of products in the industry. The products range from hybrid substrates, unpackaged resistor networks and chip resistors to a wide variety of packaged resistor networks including surface mount components.

Both NiCr and TaN resistor material can be sup - plied depending upon the application. Parts can be produced to MIL STD 883C level B or S, 83401 or 55342 as appropriate for the particular product. The table below illustrates the range of parameters attainable. All tolerances and values are not available in every type package or configuration. EFI Application Engineering looks forward to discussing your particular application and suggesting appropriate packaging solutions.

GENERAL PRODUCT CAPABILITY CHART

PARAMETER	NiCr	TaN
Resistance Values	1 ohm to 2 Megohm	1 ohm to 25 Megohm
Absolute Tolerance	±0.05%	±0.1%
Absolute TCR	10 PPM/ °C to 50 PPM/ °C	10 PPM /°C to 100 PPM / °C
Ratio Tolerance	±0.003%	±0.02%
Ratio TCR	±0.5 PPM / °C	±2.0 PPM / °C
Stability: 1000 Hrs. @ 125°C	0.020% Absolute; 0.005% Ratio	0.080% Absolute; 0.02% Ratio
Stability: 1 Yr. @ 125°C	0.052% Absolute; 0.010% Ratio	0.015% Absolute; 0.04% Ratio
Stability: 1000 Hrs. @ 200°C	0.15% Absolute	





HYBRID CIRCUIT SUBSTRATES

* Patterned and etched
* With / without resistors
* Sizes to 3" x 4"
* Conductors: Au standard, Cu available
* Ni barrier for solderability
* Sputtered metals available: NiCr, TaN, TiW, TaW,Ti, Mo, Ni, Pd
* Plated metals: Au, Cu, Ni
* Overcoat for wirebond crossovers available
* MIL STD 883C, 2032 visual

UNPACKAGED RESISTOR NETWORKS

* Wide range of values on same chip
* Silicon or alumina substrates
* NiCr or TaN resistors
* MIL STD 883C, 2032 visual
* Tight ratio tolerance, to 0.003%
* Tight TCR tracking to ±0.5 PPM / °C

COMPONENTS & PACKAGED NETWORKS

LLCC 
MOLDED DIP 
SLRC 
VERSA - CHIP 
PACKAGE TYPES AVAILABLE

Electro-Films, Inc. supplies standard and custom precision resistor networks in most standard packages in addition to several proprietary packages. Both industrial and military versions, including MIL STD 883C level H and K and MIL STD 83401 are available.

Ratio tolerances to 0.01% can be achieved in most package styles. Performance characteristics are summarized on the facing page.

EFI also manufactures R/C networks for use in EMI/RFI filtering applications. High volume, cost competitive thin film versions of thick film networks in both 50 mil and 25 mil lead spaced SOIC's are also available.

SURFACE MOUNT

LLCC: Leadless Chip Carrier

- 16, 18, 20, 28 leads
- MIL STD 83401
- MIL STD 883C level H or K

FLAT-PAKS

- Hermetic: 14, 16, 24 lead std.
- MIL STD 883C level H or K
- MIL STD 83401

PLCC: Plastic Leadless Chip Carrier

- 16, 18, 20, 28, 44 pads
- Industrial, MIL STD 83401
- Mixed Values and Tolerance

SOIC: Small Outline Leaded

8, 14, 16, lead narrow body
16, 18, 20, 24, 28 lead wide body
Industrial, MIL STD 83401

SLRC: Single Layer Resistor Carrier

- 4 to 36 pads
- Industrial
- Mixed Values and Tolerances

SOT-23 Microdivider

- Smallest Divider available
- Wide range of ratios
- Industrial

Wrap Around Chip Resistors

- Std. 402, 805, 1206 Series
- Tolerances to 0.05%
- TCR's 10, 25, 50 ppm/ c
- Solder Coated or Gold Terminals
- Nickel Barrier for Solderability

PLUG-IN

Dual In-Line

Hermetic:
8, 14, 16, 20, 24 leads
MIL STD 883C level H or K, MIL STD 83401

Molded:
8, 14, 16, 20, 24 leads
MIL STD 83401; Industrial

Single In-Line

Molded:
- 4, 7, 8, 9, 10 leads
- Industrial; MIL STD 83401

Coated:
- 3 to 10 leads
- Industrial

ELECTRICAL CONFIGURATIONS

The standard electrical configurations that are available in the above packages are isolated resistor, common bus, series connected, and R/2R ladders. In general the values and tolerances can be mixed within a given network for these configurations without incurring an artwork charge.

EFI also specializes in custom networks providing rapid delivery.

NEW PRODUCTS

R/C Networks:

- FMI/RFI Filters
- Capacitance to 1000pf
- Resistance to 1 megohm
- Tolerances 5, 10, 20 %
- 50 and 25 mil lead spaced SOIC's
- Molded SIP, DIP and PLCC's

Low Cost Resistor Networks:

Miniature thin film networks in previous thick film applications at low prices.

- Tolerance 5, 10, 20 %
- 50 and 25 mil lead spaced SOIC
- Pull Up and Line and MECL term.

THIN - FILM CHIP RESISTORS

SFM 
CBB

CTR

CBC

This is the broadest line of thin-film chip resistors available - silicon or alumina substrates, TaN or NiCr resistive material, wire bond or solder attach, tight absolute and center-tap ratio tolerances, low TCR and excellent long term stability. (For Microwave Chip Resistors, see our ad under Microwave Components.)

SILICON CHIP RESISTORS

TYPE	SIZE (Mils)	FEATURE	RESISTOR MATERIAL	* POWER
CTR	30 X 20	Center Tap - 1 Ω to 1MΩ	TaN or NiCr	250 mw
SFM	20 X 20	Single Value - 4.3 Ω to 1MΩ	TaN or NiCr	250 mw
BCR	20 X 20	Single Value, Back Contact	TaN	250 mw
SFX	40 X 40	Single Value - 1M to 2.5 MΩ	TaN	20 mw
MTR	33 X 33	Multi-Tap, 11 Taps 400 Ω to 240 KΩ	TaN	250 mw
PWA	30 X 45	Single Value - High Power	TaN or NiCr	500 mw
NET	30 X 30	(2) Resistors, series or isolated	TaN or NiCr	125 mw

* Power @70°C derated to 0 @ 175°C (100V max.)

ELECTRICAL SPECIFICATIONS	
TCR	± 100 PPM / °C STD ± 10, ±25, ±50 Special
Stability	< 0.2% Type dependent (1000 Hrs. @ 125°C)
Tolerance	0.1% to 10 %

PRECISION WIREWOUND RESISTORS

GENERAL RESISTANCE

A PRIME TECHNOLOGY COMPANY

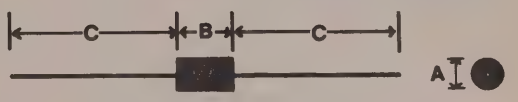
1,500,000 resistors in stock — all manufactured to meet the most exacting standards of accuracy, stability and reliability.

General Resistance has been engaged in the development and manufacture of precision wirewound resistors for over 30 years. The widest possible range of form factors is available, including axial and PC mounting types, in resistance values and accuracies to meet virtually any requirement.

"Standard values" are normally available from stock. And *any* resistance value from 1Ω to 1,100,000Ω, as well as accuracies other than the "standard" ±0.1%, ±0.025% and ±0.01%, are available.

All General Resistance resistors are manufactured to the exacting standards typified by military specifications such as MIL-R-93/MIL-R-39005 (RB and RBR styles).

ECONISTOR, MINI-OHM, AND MAXI-OHM



CURRISTOR

HUNTINGTON ELECTRIC, INC.

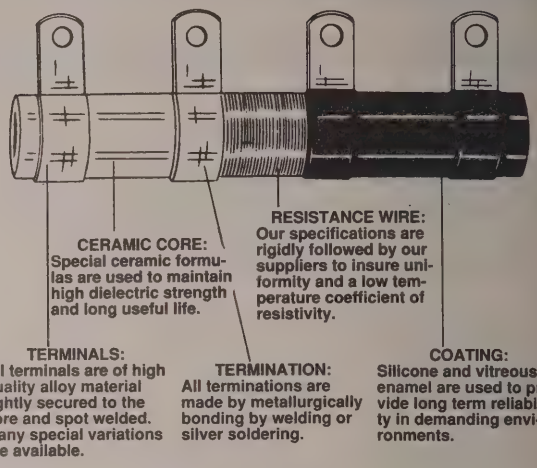
RESISTORS

About the Company

Huntington Electric, Inc. has been in business since 1950. Our products are designed and manufactured to the highest degree of reliability and quality in the industry. Our practice of blending quality, price, delivery and flexibility has given us the reputation and responsibility necessary to qualify as a quality vendor for major electrical and electronic manufacturers throughout the world.

Our on-time, as promised, delivery schedules, coupled with our process quality controls, insure you of getting what you want when you want it. Why go any where else?

FAST LANE SERVICE -
TWO (2) WEEK DELIVERY GUARANTEED



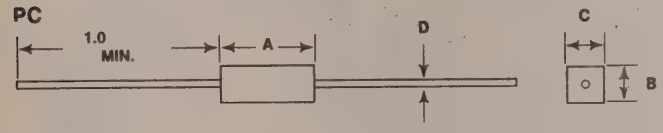
CERAMIC CORE:
Special ceramic formulas are used to maintain high dielectric strength and long useful life.
RESISTANCE WIRE:
Our specifications are rigidly followed by our suppliers to insure uniformity and a low temperature coefficient of resistivity.
TERMINALS:
All terminals are of high quality alloy material tightly secured to the core and spot welded. Many special variations are available.
TERMINATION:
All terminations are made by metallurgically bonding by welding or silver soldering.
COATING:
Silicone and vitreous enamel are used to provide long term reliability in demanding environments.

Ceramic Housed Wirewound - *Axial Leaded Standard/Tab Mount*

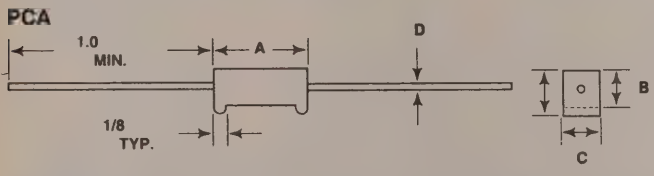
Standard Features

- Ceramic housing
- Axial leads
- 3 watts to 50 watts
- 5% or 10%
- 1 ohm to 40K ohm
- Solvent Resistant
- Temperature Coefficient 800 ppm below 1 ohm 300 ppm above 1 ohm
- Fireproof construction
- High temperature potting compound

Standard Configuration- PC Style



Alternate Configuration- PCA Style



Type	Watts	A	B	C	D	Resistance Range
PC-3	3	.875	.3125	.3125	.032	1 ohm 10K ohm

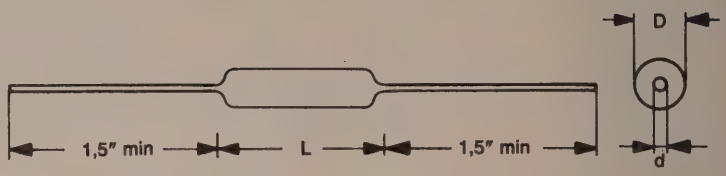
Nickel-cadmium	Cd	Ni oxides	1.35	165	1.2	33	60
Silver-zinc	Zn	AgO	1.85	285	1.5	100	170
Silver-cadmium	Cd	AgO	1.4	230	1.05	55	120
Zinc-nickel oxide	Zn	Ni oxides	1.75	185	1.6	55	110
Zinc-air[c]	Zn	Air (O_2)	1.6	815	1.1	150	155
Cadmium-air[c]	Cd	Air (O_2)	1.2	475	0.8	90	90
Zinc-O_2	Zn	O_2	1.6	610	1.1	130	120
H_2-O_2	H_2	O_2	1.23	3,000	0.8	45	65
Reserve:							
Cuprous chloride	Mg	CuCl	1.5	240	1.4	45	65[d]
Silver-chloride	Mg	AgCl	1.6	170	1.5	60	95[d]
Zinc-silver oxide	Zn	AgO	1.85	285	1.5	30	75[e]
Thermal	Ca	[b]	2.8	240	2.6	10	20[f]
Ammonia-activated	Mg	*m*-DNB	2.2	1,400	1.7	22	60[g]
High-	NA	S	2.1	685	1.8	200	[h]
temperature	Li	S	2.2	1,150	1.8	200	[i]
Solid electrolyte	Ag	Polyiodide	0.66	. . .	0.6	180	75[j]
Fuel cell:							
Hydrogen[c]	H_2	Air	1.23	26,000	0.7		[k]
Hydrazine[c]	N_2H_4	Air	1.5	2,100	0.7	800[b]	[l]
Methanol[c]	CH_2OH	Air	1.3	1,400	0.9	175[b]	185[m]

[a] Delivered capacity when discharged at normal temperatures (20°C) at normal discharge rates.
[b] Based on fuel consumption only.
[c] Weight of air not considered in computation of watt hours.
[d] Water-activated
[e] Automatically activated; high rate discharge; 2- to 10-min rate.
[f] Fused salt; heat-activated; high rate discharge; 2- to 10-min rate.
[g] Four-minute discharge rate.
[h] β-alumina electrolyte, 300°C operation.
[i] Fused salt; 350°C operation.
[j] Solid $RbAg_4I_5$ electrolyte.
[k] Several different cathode materials used.
[l] Fuel consumption is based on source of H_2.
[m] Based on methanol battery-fuel supply in situ.

Power Precision Wirewound Resistors

- ❑ 0.4W to 10.0W at 275°C
- ❑ Space efficient
- ❑ Welded Construction
- ❑ High temperature conformal coating
- ❑ Radial leads available
- ❑ Tolerances to ±.01%
- ❑ Meets MIL-R-26 requirements



Imperial Type	MIL-R-24/ MIL-R-39007	Wattage Rating	Maximum Resistance		Dimensions (inches)		Lead Diameter "d"

STANDARD TOLERANCES (±): 0.05%, 0.10%, 0.25%, 1.0%, 3.0%, 5.0%

STANDARD TEMPERATURE COEFFICIENTS:

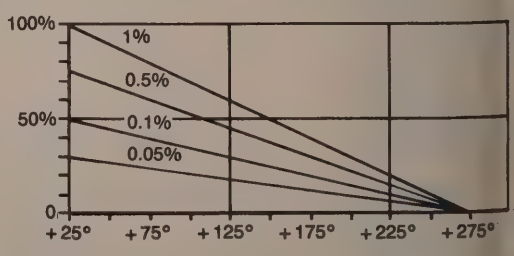
1 to 9 Ω ±50 PPM/°C
10 Ω and above ±20 PPM/°C
below 1 Ω ±90 PPM/°C

Consult factory for special temperature coefficient requirements.

CONSTRUCTION:

Alumina Oxide Core. Coppernickel alloy or nickel chrome alloy resistance wire. Leads are copperweld, tinned, solderable and weldable.
Lead diameter: AWG#18 (.040"), #20 (.032"), #22 (.025"), #24 (.020").

Non-inductive winding available: Divide maximum resistance by two; multiply maximum voltage by 0.707. Specify Imperial type "NPA.



POWER RATING:

Maximum continuous operating temperature is 275°C per MIL-R-26.

Aluminum Housed Power Precision Wirewound Resistors

- 6.0W to 50.0W at 275°C
- Designed to provide maximum heat dissipation
- Ideal high power to size ratio
- Aluminum housing allows chassis mounting and heat sink capabilities
- Meets or exceeds MIL-R-18546 and MIL-R-39009

STANDARD TOLERANCES: ±0.05% to ±3.0%

STANDARD TEMPERATURE COEFFICIENTS: ±20 PPM/°C. Other temperature coefficients available. Higher T.C. on low Ω values.

CONSTRUCTION: Steatite or Alumina core. Completely welded.

Non-Inductive Winding: Divide maximum resistance by two; multiply working voltage by .707. Specify Imperial Type "NPL".

POWER RATING: Operating temperature range: −55°C to +275°C Maximum hotspot under full rated power at ±25°C ambient per MIL-R-18546.

Derating is required for reduced chassis mounting area and for high ambient temperatures.

Precision Resistors

Axial Subminiature Precision Wirewound Resistors

Features:

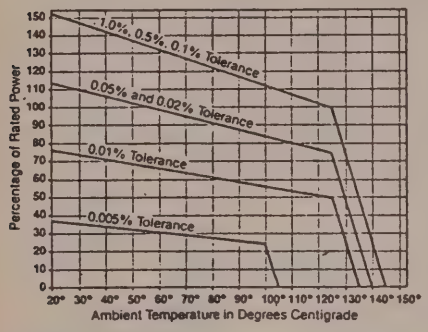
- 0.06W to 0.175W at 125°C
- Ultra-precision for critical applications
- Ideal for miniaturized circuitry
- Long term stability
- Complete Traceability
- Tolerances to ±.005%

Standard Temperature Coefficient:

-55°C to +125°C

<10Ω ±30 PPM/°C
10 to 99Ω ±20 PPM/°C
100 Ωand above ±10 PPM/°C

Lower T.C's available over a limited temperature range



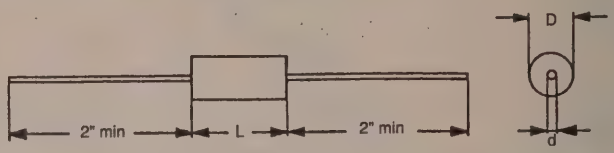
Power Rating:

*Based on continuous full-load operation at 125°C
<125°C Load derated to zero at 145°C >125°C Load may be increased

To insure maximum stability, power should be derated, depending on the tolerance required.

Power dissipation is affected by altitude, and derating at the rate of 10%/10,000 feet is recommended.

*This rating curve is intended to serve only as a guide.



Imperial Type	Commercial Wattage	Max. Volt	Max* Resistance	Min. ±Tolerance	Diameter "D" ±.005"	Length "L" ±.025"	Lead "d" AWG

RESISTANCE RANGE: Minimum resistance of the above series at minimum Tolerance is 100Ω

Axial Miniature Precision Wirewound Resistors

Features:

- 0.20W to 2.0W at 125°C
- Higher resistance values-small size
- Variety of circuit applications
- More economical than subminiaturized
- Complete Traceability
- Tolerances to ±.005%

Standard Temperature Coefficient:

-55°C to +125°C

<10Ω ±30 PPM/°C
<10Ω to 99Ω ±20 PPM/°C
100Ω and above ±10 PPM/°C

Radial Lead and Lug Precision Wirewound Resistors

Features:
- 0.25W to 1.0W at 125°C
- Long term stability
- Convenience of wiring-easy installation
- Lug style terminals eliminate need for heat sinks. (In most applications)
- Built to withstand severe vibration and shock

Standard Temperature Coefficient:
-55°C to +125°C

<10Ω	±30 PPM/°C
10 to 99Ω	±20 PPM/°C
100Ω and above	±10 PPM/°C

To insure maximum stability, power should be derated, depending on the tolerance required.

Power dissipation is affected by altitude, and derating at the rate of 10%/10,000 feet is recommended.

*This rating curve is intended to serve only as a guide.

Construction: Radial lugs are made of heavily tinned copper with a clearance hole to accomodate up to #14 wire. The axial mounting hole will accomodate standard hardware.

SURFACE MOUNT
Chip Resistors

Manufacturer of Quality Chip Resistors Since 1974

High Megohm, Wraparound Terminations

Features

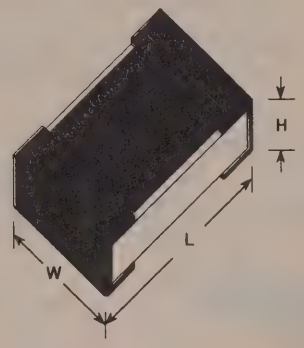
- 10 MΩ to 1,000 MΩ
- Wraparound PtAg (Platinum silver) terminations
- RC-C-0805-XXXX-X PtAg with 62/36/2 solder coated terminations for superior solder attachment
- RC-3-0805-XXXX-X PtAg terminations for epoxy or wire bonding.
- Testing to MIL-R-55342 is available

Dimensions

- Length: 0.078" ±0.005"
- Width: 0.050" ±0.005"
- Height: 0.020" max.

Specifications

- Operating temperature: –55°C +150°C
- Rated power at 70°C: 175 MW
- Resistance range: 10 MΩ to 1,000 MΩ
- Resistance tolerances: ±15%, ±35%
- Max. working voltage: 150V
- VCR measured from 0.1 to 10V:
  10 MΩ to 220 MΩ = 0.02%/V typ.
  240 MΩ to 1,000 MΩ = 0.08%/V typ.
- TCR measured from +25°C to +125°C:
  10 MΩ to 500 MΩ = ±75 PPM/°C typ.
  560 MΩ to 1,000 MΩ = ±200 PPM/°C typ.



Gigohm, Wraparound Terminations

Features

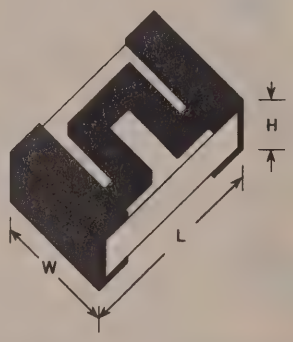
- 1.2 Gigohm to 1,000 Gigohm
- Wraparound PtAg (Platnum silver) terminations
- HC-C-0805-XXXX-X PtAg with 62/36/2 solder coating terminations for superior solder attachment
- HC-3-0805-XXXX-X PtAg terminations for epoxy or wire bonding.
- Testing to MIL-R-55342 is available

Dimensions

- Length: 0.078" ± 0.005"
- Width: 0.050" ± 0.005"
- Height: .0.020" max.

Specifications

- Operating temperature: –55°C +150°C
- Rated power at 70°C: 175 MW
- Resistance range:
  1.2×10^9 Ω to 1×10^{12} Ω
- Standard resistance tolerances:
  ±15%, ±35%
- Max. working voltage: 150V
- VCR measured from 0.1V to 10V:
  1.2×10^9 to 2×10^{10} Ohms = 0.03%/V typ.
  2.2×10^{10} to 2×10^{11} Ohms = 0.33%/V typ.
- TCR measured from +25°C to +125°C:
  1.2×10^9 to 2×10^{10} Ω = ±250 PPM/°C typ.
  2.2×10^{10} to 2×10^{11} Ω = ±600 PPM/°C typ.



Subminiature, Wraparound Terminations

Features

- Subminiature thick film chip resistors
- Designed for higher frequency and micro miniature size applications
- Termination of PtAu (platinum gold) for all types of attachments: solder, wire bonding or conductive epoxy
- Testing to MIL-R-55342 is available

Dimensions	RC-4-0302	RC-4-0402
Length	.030" ± .005"	.045" ± .003"
Width	.020" ± .003"	.025" ± .003"
Height	.015" ± .005"	.015" ± .005"

Specifications	RC-4-0302	RC-4-0402
Operating Temperature	–55°C to +150°C	–55°C to +150°C
Max. Working Voltage	50V	60V
Rated Power at 70°C	63mW	125mW
Resistance Range	10Ω to 20MΩ	*1Ω to 50 MΩ
Standard Resistance Values	E24	E24
Resistance Tolerances	5%, 10%	2%, 5%
Temperature Coefficient of Resistance	250 ppm/C° typ.	250 ppm/C° typ.

*Note: 1Ω to 9.1Ω available in RC-D-0402 style ±10%.

IRC CALL 1-800-IRC-OHMS

THE RESISTOR PEOPLE
A TT Group Company

RESISTOR SOLUTIONS FOR TOUGH APPLICATIONS

IRC is more than just another resistor supplier. We've been providing resistor solutions to customers for more than 60 years. Our proven resistive technology gives you the edge, whether your application calls for thick film, thin film or wirewound resistors. If your tough application is waiting for the right resistor solution, call the resistor people at IRC: 1-800-IRC-OHMS.

1) RG Series: Available in RL, RN, and RNC MIL styles (2) SPH Series: Drop-in replacement for BWH * For fusing characteristics see data sheet.
P20 Series: Drop-in replacement for BW20 Power ratings @ 70°C unless otherwise indicated. For available network schematic configurations, consult data sheet.
= Length H = Height above printed circuit board in case of rectangular cross section or radial leaded devices. W = Width for rectangular devices or diameter for cylindrical types. S = Lead wire diameter.

L = Length H = Height above printed circuit board in case of rectangular cross section or radial leaded devices. W = Width for rectangular devices or diameter for cylindrical types. S = Lead wire diameter.

eem MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination.* This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float.* Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof.* May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card.* The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage.* Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage.* The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

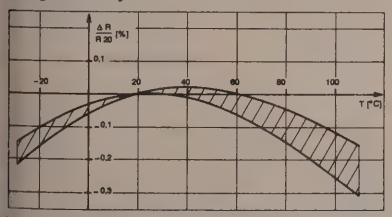
ISA-PLAN® precision resistors are ideal for sensing and controlling current. ISA-PLAN® resistor elements are are etched from rolled Manganin or optional Zeranin® foil. The foil is then laminated to a substrate resulting in a planar geometry which is ideal for high power dissipation and low inductance. Special annealing and manufacturing processes guarantee low temperature coefficient of resistance and excellent long-term stability.

Manganin, Zeranin® and Temperature Coefficient of Resistance

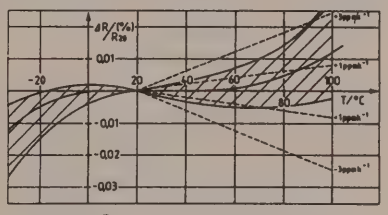
All conducting materials change resistance in response to temperature. This is typically nonlinear, but but it is usually approximated by a straight line between two temperatures. The slope of the line is known as the temperature coefficient of resistance, or "TCR."

Manganin was first developed by ISABELLENHUTTE about 100 years ago, and is the standard resistance material in the ISA-PLAN® family. Its resistance response to temperature is given in the shaded region in the figure below. From 20 to 60°C it is 10 ppm/°C. From 60 to 100°C it is 25 ppm/°C. Unless otherwise noted, tcr values for resistors are for Manganin alloys.



Manganin's resistive response to temperature. Shaded area denotes DIN 46460 allowable tolerance. Variations may result due to different design and nominal values.

Zeranin® was first produced in 1965 by ISABELLENHUTTE and is available as an option on the ISA-PLAN® product line. Its resistance response to temperature is shown in the following graph. It is approximately one order of magnitude less responsive to temperature than Manganin. It offers a tcr of 3 ppm/°C from 20 to 100°C, and on the RUG resistor, it is available with a tcr of 1 ppm/°C over this temperature range.

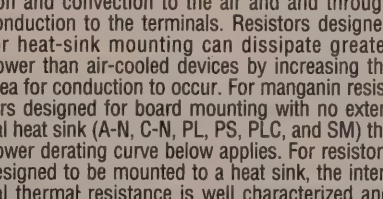


Zeranin's® resistive response to temperature.

Power Rating

Resistors convert electrical energy to thermal energy according to Ohm's law:P=EI=I²R where P is power in watts, E is the voltage drop across the resistor, I is the current and R is the resistance. The resistor must dispose of the heat generated. Equilibrium is achieved when the heat generated is equal to the heat disposed and a stable internal temperature results. This temperature must not exceed a limit that varies depending on resistor technology. If this temperature is exceeded, the stability will be compromised, or the resistor could be destroyed. For ISA-PLAN® technology, the maximum recommended continuos foil temperature is 125°C. The resistors are burned in at 140°C during manufacturing to assure stable long-term resistance when operating at 125°C.

From the foil, the heat flows away through radiation and convection to the air and and through conduction to the terminals. Resistors designed for heat-sink mounting can dissipate greater power than air-cooled devices by increasing the area for conduction to occur. For manganin resistors designed for board mounting with no external heat sink (A-N, C-N, PL, PS, PLC, and SM) the power derating curve below applies. For resistors designed to be mounted to a heat sink, the internal thermal resistance is well characterized and given in this literature for thermal analysis. Isotek can provide technical support if required.



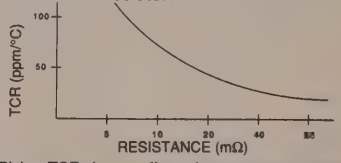
Power derating curves for air cooled resistors of different tolerances.

Pulse Power

The unique laminated construction makes ISA-PLAN® particularly adept at handling pulsed power by increasing the effective thermal mass of the resistance element. A factor of 10 times the continuos power rating is generally acceptable for pulses up to one second in duration. This varies somewhat with the specific resistor package and with the duty cycle of the pulse.

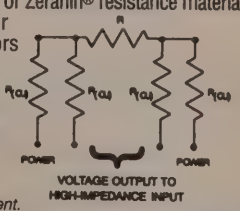
Kelvin Connection

Kelvin or four terminal connection is recommended for low-ohmic current sensing resistors. The lower in ohmic value, the more strongly it is advised.This is because the copper terminals become an ever increasing part of the overall resistance as the value decreases. The tcr of copper is around 4000 ppm/°C. This produces a large variation in effective resistance as the temperature of the resistor changes. This influence is illustrated by the graph below, which shows how the benefit of 10 ppm/°C Manganin is diminished by the copper when the resistance drops below about 80mΩ in a two terminal resistor.



Rising TCR due to effect of copper with decreasing resistance.

This problem is eliminated with Kelvin connections where the voltage drop is measured on the resistor itself and directed to a high impedance source. The tcr is only a function of the Manganin or Zeranin® resistance material. ISA-PLAN® four terminal resistors have the Kelvin connections etched directly to the resistive element.



Kelvin measurement.

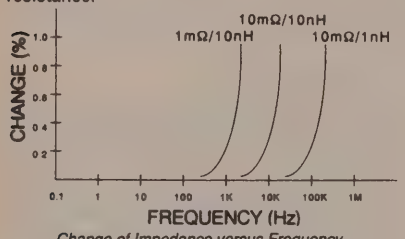
Reactance, Impedance & Inductance

The presence of capacitance or inductance in an AC circuit produces a phase shift between the current and voltage known as reactance. Impedance is the ratio of effective voltage divided by effective current in an AC circuit. In low ohmic resistors, the effect of inductive reactance dominates. While the inductance of the resistors described in this literature are typically less than 10 nH, mounting and wiring or trace layout can increase the effective inductance. The total impedance (which determines the resulting measured voltage drop) is given by:

$$Z=[R^2 = (2\pi fL)^2]^{0.5}$$

A 1 mΩ resistor with a net inductance of 10 nH produces an error in measurement of 1% at a frequency of 2.23 kHz. The figure below illustrates the relationship between frequency, inductance and resistance. The error increases with increasing frequency and decreasing resistance.



Change of Impedance versus Frequency.

Thermal EMF

Dissimilar metals in contact produce a voltage. This voltage varies with temperature and is known as "thermal emf." This emf must be considered in low value resistors in DC circuits. Copper, the terminal material, is used as the reference metal. Manganin and Zeranin® have low thermal emfs of <2μV/°C with copper. One side of the resistor is a =2μV/°C generator and the other side is a -2μV/°C generator. Ideally, both ends of the resistor are at the same temperature, and the thermal emfs cancel. The low terminal emfs of Manganin and Zeranin® minimize this influence on the measurement, but it is up to the user to assure that the resistor is not being non-uniformly heated by other components in the application. Since measurements are generally above 50 mV, a few degrees of differential temperature will not affect the accuracy materially.

Noise

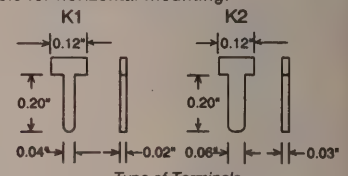
Noise is an undesired signal from the resistor. Noise in ISA-PLAN® metal foil resistors is primarily due to thermal effects. Thermal noise comes from random electron motion in the resistive material, resulting in a small and fluctuating potential difference across the terminals. This is given by the equation:

$$E=[4KTR\ (f2-f1)]^{0.5}$$

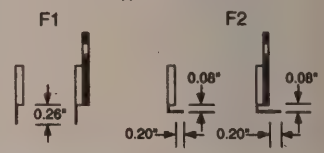
where K is Boltzmann's constant, T is the absolute temperature in Kelvin, R is the resistance and (f2-f1) is the bandwidth in Hertz. Typically, this noise is less than a few μV and can be ignored in most applications.

Terminals and Current Limits

For through-hole resistors, the standard terminal is shown as K1 below. For applications over 35 amps, the optional K2 is recommended up to 80 amps. (PBH and PBV have K2 power terminals as standard.) For over 80 amps, the high-power packages with screw terminals or buss bar mounting are recommended. Type F2 terminals are available for horizontal mounting.



Type of Terminals



Connection Types

Ordering Notes:

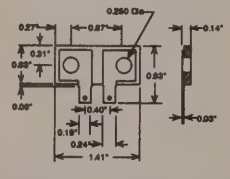
1. An "R" is used in place of the decimal to avoid its loss.
2. Manganin is the standard resistance material. To specify Zeranin® material, place a "Z" after the package designation.

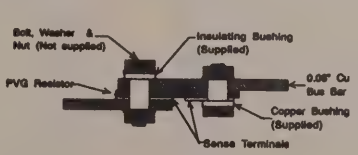
EXAMPLE: BSH-Z-R001-1.

BUS-BAR MOUNTED

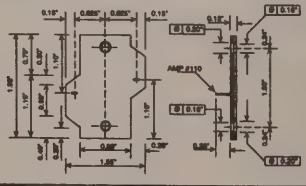
The PVG and BSH resistors are ideal for use in high-power supplies, UPS equipment and motor drives. Both packages are designed to be integrally mounted into the current-bus structure. This results in a mechanically rigid construction as well as space savings and assembly convenience. This unique design enables the current bus to also serve as heat-sink.

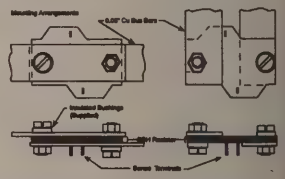
MODEL PVG 10 WATT/FOUR-TERMINAL (50 ppm/°C)





MODEL BSH 30 WATT/FOUR-TERMINAL (50 ppm/°C)

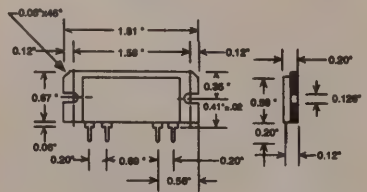




THROUGH-HOLE

Through-hole resistors are available in packages ranging from 0.5 watts to 10 watts of power dissipation. The PBH/PBV resistors are recommended for general purpose use while the A-series is recommended where exceptional accuracy and tcr performance is required.

MODEL A-H1



MODEL A-H2

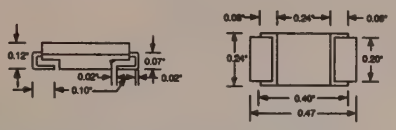
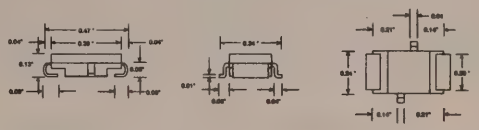
SURFACE MOUNT

These are the first low-ohmic resistors fully compatible with surface mounting and soldering equipment. Both are supplied in embossed 24 mm carrier tape per EIA-481 for automatic mounting.

MODEL SMR

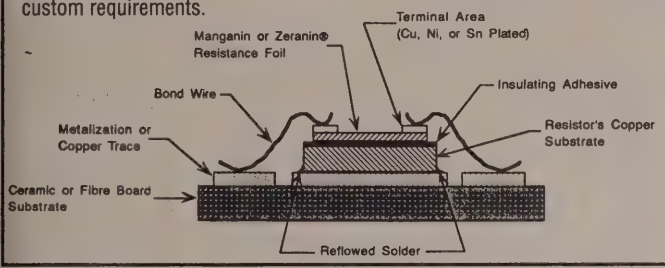


MODEL SMV

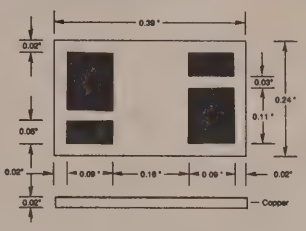


WIRE-BONDABLE

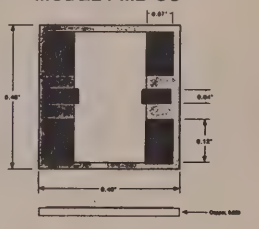
ISOTEK has developed sense resistors for use with hybrid circuit technology. two examples appear here. The substrate is thin copper to maximize heat conduction to the ceramic or cold-plate. Extremely high currents have been measured in small areas with this technology. Consult Isotek with custom requirements.



MODEL PMA-Cu



MODEL PMB-CU

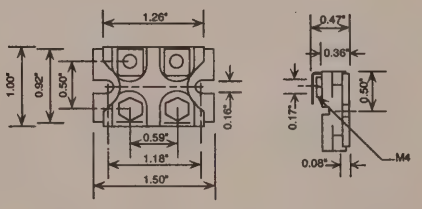


HIGH-POWER SCREW TERMINAL BASE MOUNT

MODEL RTO- 50 Watt

The RTO is identical to the SOT227B "ISOTOP" package (TO-238). With 2500 VAC isolation to the base, the resistor can be operated at the high side of the AC line.Ideal for use as a current sense resistor or as a power resistor in snubber RC-bypass for protection of transistors and thyristors. The heavy copper terminals allow continuous currents up to 200 A and short pulse currents to 1500 A. The RTO is available in 2,3, and 4 terminal configurations with single, double or triple resistors.

Resistance Range: 0.2 mΩ-100Ω
Inductance: 6 nH (R010);
Tolerance: 1.0, 2.0, 5.0%
Weight: 1 oz;
Internal Heat Resistance: 1.5°C/Watt
TCR: 50 ppm/°C Manganin; 20 Zeranin®
Ordering Example: RTO-A-R010-1(10mΩ/1.0%)for 2 or 4 term.; RTO-G-(1-3)R001-(3-4)R010-(4-2)R001-1 for separate 2 term., double resistor, resistor network, triple resistor and triple network.



AVAILABLE CONFIGURATIONS

A — Two-terminal Resistor

B — Four-terminal Resistor

C — Two-separate Two-terminal Resistors

D — Double Resistor

E — Resistor Network (Low ohmic resistor in four-terminal

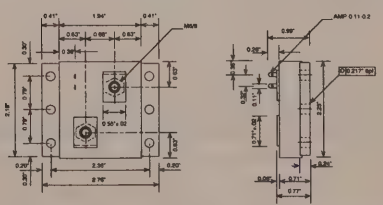
F — Triple Resistor Ideal for sense resistors, or as power resistors in smubber RC-bypass

G — Triple Network

MODEL RUG- 100 Watt

Designed for high DC and low frequency AC current, the RUG's package geometry is common to high power transistor modules. In this package, Zeranin® can be specified at a 3 ppm/°C or 1 ppm/°C tcr. Manganin is standard at 10 ppm/°C.

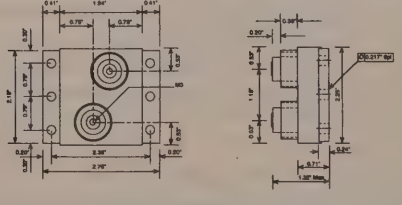
Resistance Range: 1 mΩ-1Ω
Inductance: 9 nH (R010)
Tolerance: 0.1, 0.2, 1.0%
Weight: 9.3 ounces
Internal Heat Resistance: 0.3°C/Watt
Ordering Example:
RUG-R050-1 (50 mΩ/1.0%)



MODEL REG- 250 Watt

The REG is a high power, high isolation (5000 Volts AC to base) resistor that has been specially developed for RC snubber protection. It can withstand instantaneous pulse power up to 2 kW. The resistive element is directly bonded to a ceramic plate that is again bonded to the copper base plate. This construction guarantees a very low internal heat resistance of less than 0.1°C/Watt and high isolation.

Resistance Range: 1 Ω-1500 Ω
Inductance: 400nH (22R0)
Tolerance: 0.1, 0.2, 5.0%
Weight: 9.5 ounces
Ordering Example:
REG-100R-1 (100Ω/1.0%)



ISA-PLAN® PRECISION CURRENT SHUNT NETWORKS

ISA-PLAN® resistor networks were specially designed for application in digital and analog current measuring and regulation devices in which the current must be measured over a range of several orders of magnitude. Since each resistor element is etched from the same physical section of metal foil, the matching of the resistors to each other is unsurpassed in the industry.

JULIE RESEARCH LABORATORIES INCORPORATED

PRECISION WIREWOUND RESISTORS

PRECISION RESISTORS FOR EVERY APPLICATION

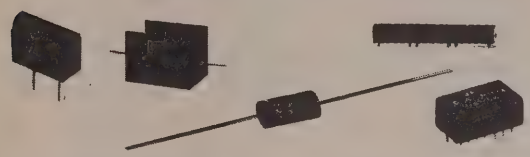
Precision Resistors for every application imaginable; high quality, low priced precision resistors are available for your every design need and at delivery schedules even distributors can't beat!! JULIE RESEARCH resistors are guaranteed for a lifetime performance in almost every value, tolerance and stability.

Available as individual, ratio or network assemblies, these expertly manufactured and trimmed resistors assist you in eliminating countless hours of Production Test time from your design. In addition, the use of these very stable resistors contribute to reliable design and reduced component count. Specify a Julie Resistor. Better yet, call us and we will assist in helping you get the best price-performance unit your application and budget will allow.

JUST A FEW OF THE PROVEN APPLICATIONS FOR THESE LOW REACTANCE HIGH PERFORMANCE RESISTORS ARE:

- Transducer Calibrating Networks
- Current Metering
- Gyro Torquing
- AC and DC Precision Bridge Elements
- Amplifier Summing Elements
- D/A Converters
- Reference Divider
- Precision Multiplier
- Resistive Divider Networks
- Shunting
- AC or DC Ratio
- High Performance MIL Spec
- Zener Trimming Networks

RESISTOR STYLES



SPECIFICATIONS

Precision wirewound resistor accuracy and stability available in standard DIP styles.

Range: 100Ω to 100 KΩ per resistor.

Ratio Accuracy: To .001% for ratio 1:1.

Stability: Network .002% for standard ranges.

Temperature Coefficient: 1 ppm/°C to 20 ppm/°C.

Custom designs available — contact factory for other package styles.

SPECIFICATIONS

Range: Individual Resistors, 1 ohm to 5 megohms. Ratio Sets, 1:1 to 10^4:1 depending on total resistance required.

Accuracy: Standard accuracy of resistors, 0.005% for values from 1000 ohms to 5 megohm. Standard accuracy of ratio sets, 0.0025% for ratios near 1:1. Accuracies from 0.002% to 0.1% are available (at corresponding prices) on special order.

Stability: Resistors, 0.002% per year for standard ranges.

Accuracy Over Military Temperature Range: ±0.02% from −45°C to +85°C.

Matching Over Military Temperature Range: ±0.005% from −45°C to +85°C.

Retrace Over Military Environmental Conditions: 0.002%.

Temperature Coefficient: Resistors, 5 ppm/°C standard. (Available as low as 1.0 ppm/°C). Ratio sets, 2.5 ppm/°C standard.

Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.

Thermal Transients: All thermal-induced transient effects, e.g.: self-heating, Seebeck and Peltier effects, are less than 0.0015% at rated power dissipation. Self-heating and time constants of thermal transients are reduced to 10% of normal values in air.

Current Capability: To 2 amperes.

Voltage: Between Terminals, 300 volts maximum, Terminals to Case, 500 volts maximum.

SPECIFICATIONS

Range: Individual Resistors, 1 ohm to 10 megohms. Ratios, 1:1 to 10^4:1, depending on total resistance required.

Accuracy: Standard accuracy of resistors, 0.01%, for values from 100 ohms to 5 megohm. Standard accuracy of ratios, 0.005%, for ratios near 1:1. Intermediate accuracies of 0.05% and up and higher accuracies to .0025% are available on special order.

Stability: Resistors 0.003% per year for standard ranges.

Accuracy Over Military Temperature Range: 0.02% from −30°C to +85°C.

Retrace Over Military Environmental Conditions: 0.003%.

Temperature Coefficient: Resistors, 5 ppm/°C standard, (available as low as 1.0 ppm/°C). Ratios, 2.5 ppm/°C standard.

Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.

SPECIFICATIONS

Range: Individual Resistors, 0.1 ohm to 100 ohms.

Accuracy: Standard accuracy of resistors, 0.01%, for values from 1.0 ohm to 100 ohms. (R_1 x G) .005% (CH).

Stability: Resistors 0.003% per year for standard ranges.

Accuracy Over Military Temperature Range: 0.02% fom −30°C to +85°C.

Retrace Over Military Environmental Conditions: 0.003%.

Temperature Coefficient: Resistors, 5 ppm/°C standard, (available as low as 2.5 ppm/°C).

Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.

Voltage and Power Ratings: See chart.

Construction: See charts.

Group Encapsulation: Special techniques permit group encapsulation of high-accuracy units on a high-yield basis, enabling better accuracies at competitive costs. (See JRL Bulletin B-11.)

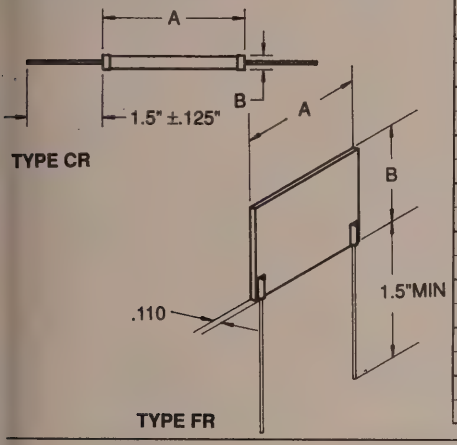
PRECISION METAL OXIDE HIGH VOLTAGE RESISTORS

- **Coatings:** Epoxy varnish standard for cylindrical resistors; conformal epoxy for flat. Consult factory for silicon, glass, or other coatings.
- **Leads:** Tinned copper .032" standard on all styles except CR1040 (which has .020" leads standard). 0.020 leads available on CR12XX Series; 0.020 nickel cap and lead standard with glass-encapsulated resistors (not available with Type CR1040 or CR25XX Series). Consult factory for other sizes and materials.
- **Tolerances:** 10%, 5%, 2%, and 1% standard (above 500G, 10% only). Tolerances to .5% available for some types.



- **Maximum Surface Temperature:** 220°C for cylindrical styles (CR1040, CR12XX, CR25XX Series); 150°C for flat styles (FRXXXX and FDXXXX Series).
- **Voltage Coefficient:** Typically less than 5 ppm/V in mid-resistance values.
- **TCR:** Tighter temperature coefficients than those tabulated available on some models.
- Burn-in and other specialized testing to high reliability specifications (e.g. MIL-R-49462) available. Consult factory.

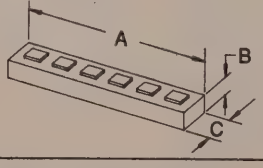
- Electrodes solder-coated for ease of soldering
- High mechanical and dielectric strength
- Custom desigh to customer requirements
- Easy to Install



PRECISION VOLTAGE DIVIDER RESISTOR NETWORKS AND RESISTOR-CAPACITOR NETWORKS

- Fast delivery! Typical turn-around time: 10 days
- Custom designed; divider ratios to 1000:1
- Coating: conformal epoxy
- Burn-in and other specialized testing to high reliability specifications (e.g. MIL-R-49462) available. Consult factory
- Dividers and networks are available in the following packages: (1) flat design (like Type FR resistors); (2) Surface Mount design, both Single and Dual In-Line Package; and (3) custom design
- TCR tracking as low as 25 ppm/°C

CHIP AND WIRE HYBRID CIRCUITS CUSTOM DESIGNED AND MANUFACTURED

We've had plenty of experience designing and manufacturing thick film hybrids to the most demanding customer specifications. K and M Electronics' SMT hybrids are standard components of the world's finest miniature high voltage power supplies.

Your circuit will receive personal attention from the initial concept, through computer-aided design and manufacture, until the final product is tested and delivered to you – – in less time than you might think.

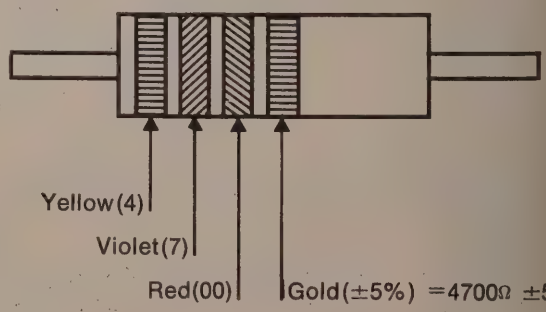
Example:



Bantry Components, Inc.

KRL's complete product line is now available in Surface Mount Packaging, including: Precision wirewound resistors with temperature coefficients from ±1 PPM to ±10 PPM with tolerances from ±.005% to ±1%; Power Resistors from 1 to 3.5 watts with Wirewound or Metal Oxide elements; Linear Response Temperature Compensating resistors; and Specialty Fuse resistors. While other manufacturers rely on mechanical terminations and connections, KRL has chosen to utilize standard Manufacturing techniques for thru-hole resistors, including Mil-R-93 and Mil-R-26 standards for wirewound resistors and applied them to the production of a surface mountable device. As always, KRL's Application Specialists are available to assist with design criteria for any Surface Mount or Thru-Hole resistive component need.

GENERAL SPECIFICATIONS

- Standard Tolerances: .005%, .01%, .02%, .05%, .1%, 0.2%, 0.5%, & 1%
- Standard Temperature Coefficient ±5 PPM to ±10 PPM (±1 PPM avail)
- Temperature Compensating TC's from +80 through +6000 PPM
- Custom Designs Welcome
- TC Matching to ±0.5 PPM/°C @25°C
- Stability: 0.0025% (1st Year), 0.005% (2nd Year). 0.001% is available

♣ KRL Temperature Compensating WIRE WOUND RESISTORS

KRL High T.C. Resistors are available in any of the packages listed in this Catalog

RESISTANCE RANGE—10Ω to 5MegΩ

TOLERANCE—Standard from 10%, 5%, 3% and 1%. Accuracies to 0.1% are available. Consult factory for special requirements.

TEMPERATURE RANGE—From −55°C to +145°C

TEMPERATURE COEFFICIENTS—Available from +80PPM/°C to +6000PPM/°C (See Table Right). Use Order Code A thru T for standard T.C.'s shown.

SPECIAL TEMPERATURE COEFFICIENTS—If you need a special...non-standard T.C., use Order Code X and specify the exact T.C. required and temperature range of operation with +25°C as reference temperature. (Factory must approve all non-standard T.C.)

APPLICATIONS—Since there are many packages that a High T.C. Resistor can accommodate, it is impossible to show all types. Most often a customer will have a unique situation and our engineering department will gladly aid in any design and development of customer requirements. KRL High T.C. Resistors have found their way into Power Supplies, Motor Controllers, Computers, Electronic Circuits for D to A and A to D Converters, Temperature Sensors for the Medical Electronics Field, Aircraft Systems, Aerospace Flight Modules, and in Automotive Electronic Ignition Systems.

KRL Order Code	TEMPERATURE COEFFICIENT		Maximum (2) Resistance In Percent
	Cold Range In PPM/°C −55°C to +25°C	Heat Range In PPM/°C +25°C to +125°C	
A	+80±20	+80±20	80
B	+100±10	+100±10	80
C	+120±10	+120±10	80
D	+140±30	+140±30	80
E	+180±30	+180±30	80
G	+290±30	+290±30	25
H	+380±40	+400±40	70
J	+450±50	+450±50	60

L	+850±80	+850±80	50
M	+1000±100	+1000±100	50
N	+1500±200	+1400±200	50
P	+2600±200	+2600±200	50
Q	+3500±300	+3500±300	40
R	+4000±400	+4500±400	10
T	+5000±300	+6000±300	10
X (1)	SPECIAL T.C., SPECIFY EXACT TCR. SUBJECT TO FACTORY APPROVAL		

(1) KRL will manufacturer to any T.C.R. to meet customer specifications.
(2) Maximum resistance in percent should be applied to the style chosen in the normal catalog listing column marked Maximum Resistance.

♣ KRL Nonflame Fusible Metal Film Resistors FPR SERIES

FPR Nonflame Fusible Metal Film Resistors

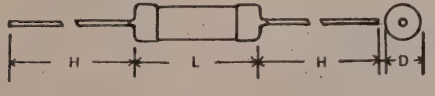
The FPR Nonflame Fusible Metal Film Resistors were designed to limit thermal surge and resulting circuit damage due to excessive voltage. FPR Resistors provide reliable and accurate blow characteristics. The FPR resistors fail in an open mode. These resistors are available in ohmic values from .22 to 100k ohms, and wattage sizes from ¼ to 3 watts.

Various telephone power line, and tip & ring circuits utilize the FPR resistor to protect sensitive parts from lightning strike surges. Other circuits that would benefit from these fusible resistors are inputs that may be exposed to line voltage faults, or power supplies that need current limiting with a safe, nonflame failure mode. Since each circuit has different and custom requirements, KRL/Bantry will work with your engineering staff to choose the correct part for your application.

FEATURES

- Small package size.
- Noncombustible insulating coating.
- Coating resists freon cleaning solvents.
- Temperature coefficients less than ±200 PPM.
- Uniform fusing characteristics.

DIMENSIONS:



TYPE	L±.04	D±.024	H±.25	Lead Awg	Resistance Range
FPR-¼W	.276	.104	1.25	24	0.22Ω—100K Ω

ELECTRICAL SPECIFICATIONS:

Resistance Tolerance: 5% , 3%, 1% Std (Accuracies available to .01%)

Temperature Coefficient: 90 PPM/°C Less than 1Ω; 50 PPM/°C 1Ω to 10Ω; 30 PPM/°C 10Ω to 100Ω; 20 PPM/°C 100Ω and above.

Short Term Overload: 5 Seconds at 5 times rated power.

Operating Range: -55°C to +275°C (U Rating) or +350°C (V Rating).

Covering: Flame Retardent Silicone (Molded & Coated)

Windings: Space wound on Ceramic or Alumina Oxide Cores. Noninductive windings are available & identified by adding an "N" in front of the style number.

METAL OXIDE VARISTORS & CERAMIC CAPACITORS

MAIDA DEVELOPMENT COMPANY
"DOMESTIC MANUFACTURERS SINCE 1947"

90,000 square foot manufacturing facilities located in Hampton, Virginia

Maida

See our Ceramic Capacitor Listings - Section 1500.

serving the electronics industry as partners in progress for more than forty-five years

Maida Development Company is a domestically owned and operated manufacturer of a wide variety of electronic ceramic components. Since 1947, we have specialized in the custom design and fabrication of ceramic disc capacitors - from ceramic dielectric powder formulation through finished devices - to meet the specific requirements of our customers. Maida's major capacitor products include (1) Class I, Class II, and Class III high voltage disk capacitors, 1 KDVC thru 30 KDVC; (2) capacitors safety- recognized by UL, CSA, and VDE. for across-the-line, line-by-pass, and antenna-coupling applications; (3) close tolerance adjusted NPO disk capacitors; (4) low-inductance leadless disks; (5) slot-mountable "trapezoids" for printed circuits; (6) trimmer capacitors; (7) post insulators/capacitors; (8) radial tubular capacitors; (9) feedthrus and (10) sparkgaps.

Maida Development Company also produces a complete line of metal oxide varistors (MOV's) designed for transient voltage suppression and surge energy absorption. We are now the only U.S. manufacturer of these components, with ceramic formulation, powder preparation, fabrication and assembly facilities all located in this country. Maida's varistors are recognized by UL, CSA and VDE. Please contact Maida's Sales Department to request our full-line varistors catalog.

Delivery is both timely and reliable - with either bulk or tape and reel packaging.

Our sales representatives are strategically located throughout the USA and world. Maida welcomes the opportunity to discuss and bid on requirements not covered by this catalog. Please contact our Engineering Department.

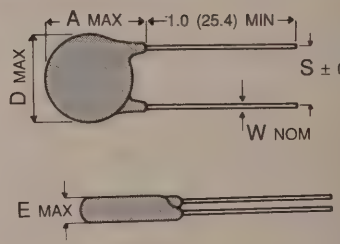
D69	0.6	D75	1.4

STANDARD DIMENSIONS: inches (mm)



Style Designation: (typical)

D69--ZOV511RA110

Style Designation: (typical)
D69--ZOV511RA110

WHERE:

- **D-** Coating identification, D means standard flame-retardent fluid bed epoxy.
- **69-** Size code, 2 numbers. See Dimensions Table.
- **--** Lead Configuration code, 1 or 2 numbers used for non-standard leads. Standard leads use no code.
- **ZOV-** Material identifier, zinc oxide varistor.
- **511-** AC Voltage Rating code, 2 significant figures plus number of zeroes that follow, I.e. 511 is 510 VAC.
- **RA-** Special instructions code, RA is standard.
- **110-** Energy Rating code, up to 4 numbers. See Ratings Tables

MEMCOR-TRUOHM represent the cumulative design and production knowledge gained during 30 years experience in the industry.

Let MEMCOR-TRUOHM sales engineers aid you with your special design and application requirements.

For price, quality, and delivery look to MEMCOR-TRUOHM. Immediate delivery on stock value resistors. Typical 3-5 week delivery on other standard values and special requirements. These products are available from MEMCOR-TRUOHM's Nationwide Authorized Distributor Network.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

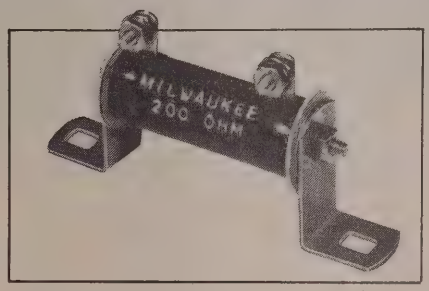
CUSTOM ROUNDWIRE POWER RESISTORS

BASIC CONSTRUCTION

MRC can build a resistor to your specifications on any of the basic cores shown. If these do not fit your needs, engineering assistance is available for 32 additional cores. Ratings based on 325°C above 25°C ambient. Consider the following options to meet your requirements, special applications, and size limitations.

- **Special Tolerance**
  Resistance tolerances to ±1%
- **Special Coatings**
  Silicone-cement



- **Special Taps**
  Most any to fit your specifications
- **Special Windings**
  Aryton-Perry (non-inductive round-wire only)
  Bifilar (non-inductive)

- **Special T.C.**
  Temperature coefficient to 20 ppm/°C
- **Special Terminals**
  Single and double ¼" quick connect
  Metal sleeve ferrule
  Live-bracket
- **Hardware**
  Terminal hardware
  L-bracket mounting
  Spring clip mounting
  Vertical mounting hardware

LOAD BANKS

MRC will custom design and build load banks to your requirements.

AVAILABLE WATTAGE RATINGS by core size. Ratings based on 325°C above 25°C ambient.

VITREOUS ENAMEL RIBWOUND RESISTORS

BASIC CONSTRUCTION

Crimped ribbon resistance wire is edgewound and then locked to the ceramic core with vitreous enamel. The resistance wire is spot welded to the terminal bands. MRC Ribwounds can be supplied in fixed, adjustable, or tapped styles. Cement or silicone coatings are optional.

HI-OHM RIBWOUNDS AN EXCLUSIVE WITH MRC

In the chart below, note that the maximum ohmic value shown for each wattage is 3 to 4 times higher than that normally available. This development is the result of precision rib winding machines designed specifically by MRC. Unique in the industry, these precision machines produce a winding with extreme uniformity. This allows much closer turns providing significantly higher resistance. Hi-Ohm Ribwounds can replace lower ohmic value roundwire power resistors with savings in size.

OHMS	OHMS	OHMS
0.1	1.25	10.0
0.15	1.5	12.0
0.2	2.0	15.0
0.25	2.5	16.0
0.375	3.0	20.0
0.5	4.0	25.0
0.6	5.0	33.0
0.75	6.0	50.0
1.0	8.0	100.0

Many 300 watt units are stocked in both fixed and adjustable styles. Listed are the more popular 300 watt ohmic values. All other wattage ratings and styles are made to order.

APPLICATIONS

Recommended for use where high energy is to be dissipated in the lower ohmic ranges. With its ability to dissipate greater heat, the ribwound resistor is almost one half the physical size of an equally rated roundwire.

Ribwound wattage ratings are based on a temperature rise of 375°C above an ambient of 40°C.

They can be mounted with spring clips (thru 1⅛" dia.); thrubolt hardware, individual or multiple-stacked bracket assemblies or live-bracket assemblies.

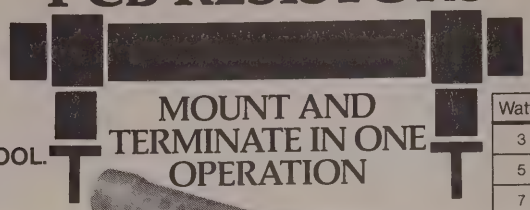
PCB RESISTORS



- **Built-in Standoffs Keep Board COOL.**
- Mounting feet prevent rocking.
- Power ratings 3 to 20 watts.
- Wide ohmic range.
- One-piece welded terminals.
- Standard pin spacing: 1/10″ cc multiples, special spacing on request.
- Rectangular pins .025 x .045 in. (mount in .078″ dia. PCB holes).
- Silicone-Quartz coating.
- Standard tolerances ±5% over 1 ohm, ±10% under 1 ohm & adjustable.
- 20 PPM upon request.
- Wattages based on 275° C rise above an ambient of 25° C.

* U.S. Patent 3,462,651.

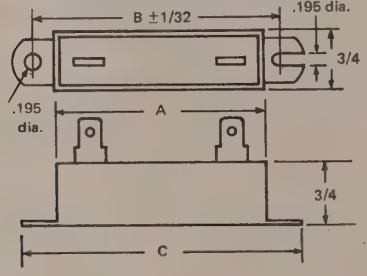
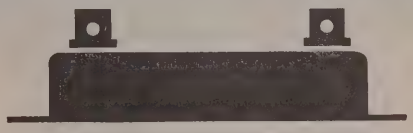
METAL CASE RESISTORS

For Motor Starting, Speed Control, Solid State Ignition Systems, Shunts, Potted Circuits, and Voltage Dropping

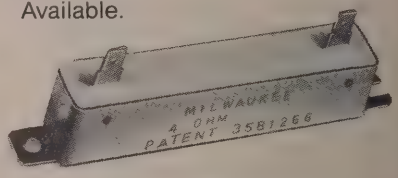
- High Heat Sink Capability—Flush Mounted Metal Case dissipates heat faster.
- Rugged—Shock Resistant.
- Wattage Rating-20 to 100 Watts-based on 275°C ambient.
- Resistance Range 0.2 ohm to 66,000 ohms (depending on voltage).





- Dielectric Strength—1500 Volts RMS (must be specified).
- Terminals—quick connect—screw/solder lugs.

- Additional Mounting Configurations Available.



Watts Ratings at 275° C rise showing benefit of mounting flush for full heat sink.††		Dimensions			Ohmic Range		Part Number

EDGEWOUND POWER RESISTORS

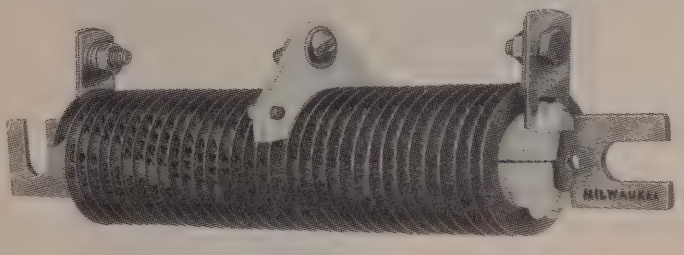
EDGE·POWER



HIGH CAPACITY GOOD WEIGHT/WATTAGE RATIO

EDGE-POWER resistors complement Milwaukee Resistor's roundwire, ribwound and grid resistors which have been the industry's workhorse of electrical power dissipation for many years.

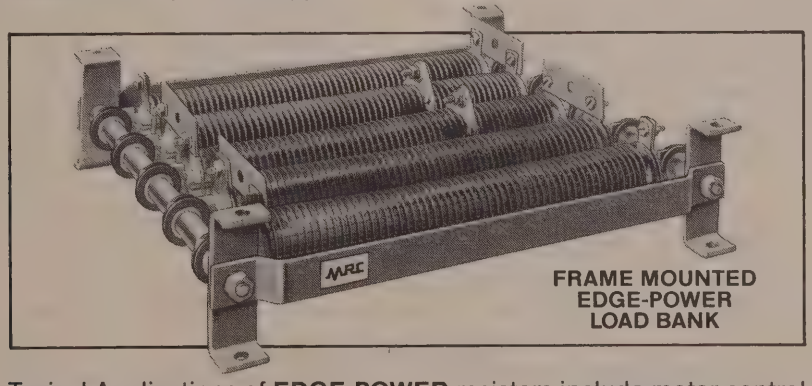
A continuous range of resistor types are now available for your high current applications. EDGE-POWER falls naturally between MRC's ribwound and grid resistors and allows full design versatility from one source.

Because of the open coil construction of EDGE-POWER resistors, heat dissipation is efficient, and reasonable surges/overloads are easily accommodated.

The heavy duty resistance-alloy coil is supported on specially designed porcelain insulators which provide insulation and proper turn-to-turn spacing. The end-slot/side-slot support bar provides versatility in mounting and adapts easily to many existing installations.

Movable tap terminals are available as an option. Terminal hardware for cable attachment is provided as a standard item on all terminals and taps.

Frame mounted load banks (as shown below) can be furnished with taps and jumpers to meet your circuit specifications (series, parallel or combination). Your load bank inquiries are invited.



FRAME MOUNTED EDGE-POWER LOAD BANK

Typical Applications of **EDGE-POWER** resistors include motor control (starting, plugging, speed control and braking), load dumping, ballast, current limiting, and voltage dropping. Edgewound resistors are commonly found in:

- Overhead Cranes
- Locomotives
- Lift Trucks
- Plating Baths
- Elevators
- Power Supplies
- Arc and Spot Welders
- Battery Lines/Chargers
- Many Industrial Controls

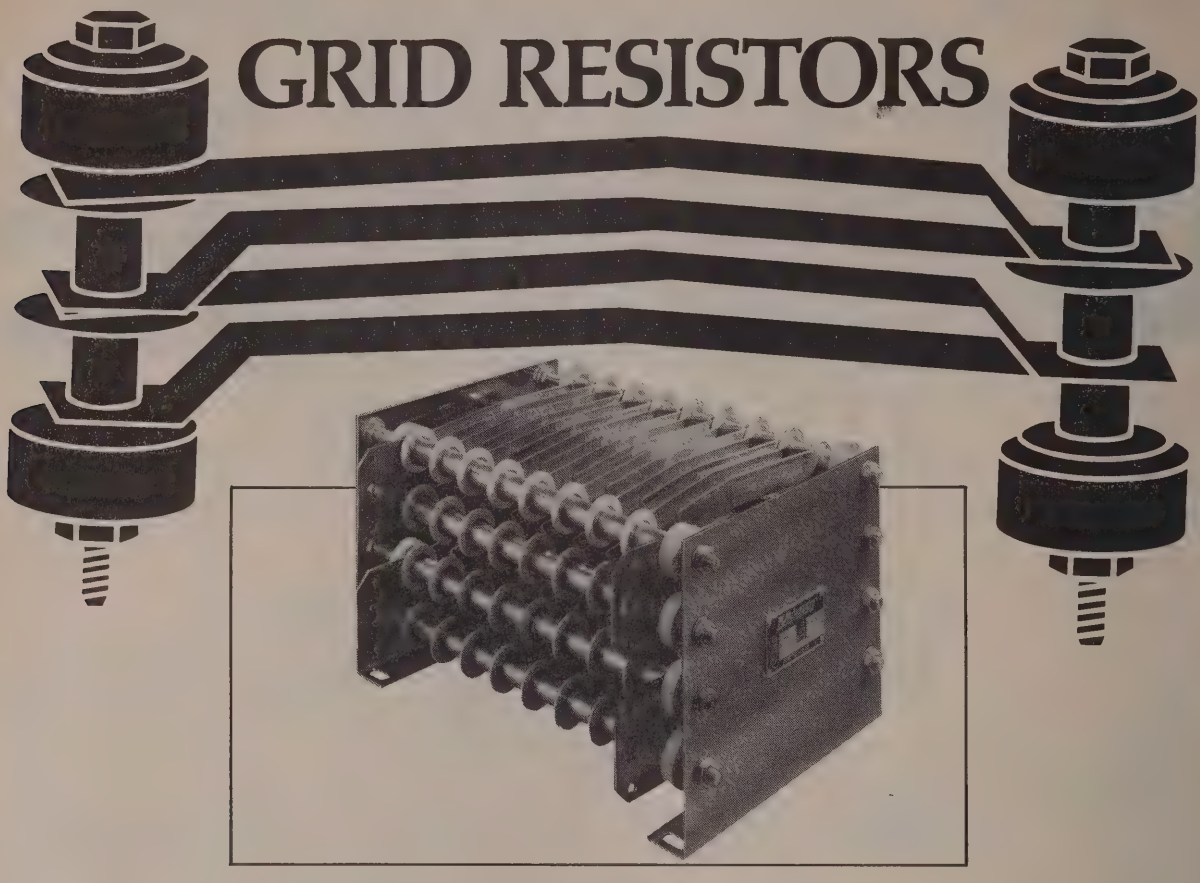
GRID RESISTORS



...For High Current and High Power Circuits

Milwaukee Grid Resistors are among the most versatile grid resistors developed. They are custom designed with the aid of a computer for specific applications.

Special features that assure longer life include: a patented* grid design that withstands overloads that would destroy conventional grids. Corrosion resistant stainless steel or special alloy elements. All-welded construction to eliminate hot spots and resistance fluctuations. Vibration-proof insulation that allows extended operation at higher voltages.

Taps and independent sections can be easily incorporated into the design to provide added flexibility. MRC grid units can be designed for use with natural convection cooling or with forced ventilation if size reduction is necessary.

They are competitively priced and incorporate more life and greater dependability than usually provided by conventional grid resistors.

*U.S. Patent 3,212,045

Typical Characteristics:

- 375° C temperature rise above an ambient of 40° C.
- Temperature coefficient of 150 ppm/° C.
- Hi potential test at 1500 VRMS—Higher on request.
- Resistances available to approximately 2 Ohms maximum.

Typical Applications:

- Motor starting
- Braking
- Power systems
- Crane controls
- Dummy loads
- Grounding resistors
- Speed controls
- Feedback resistors
- Heaters
- Industrial controls

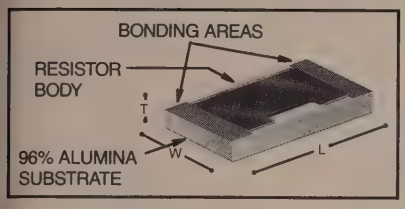
PRECISION THICK/THIN FILM CHIP RESISTORS

MINI-SYSTEMS, INC.
20 David Road, P.O. Box 69, North Attleboro, MA 02761
TELEPHONE: (508) 695-0203 • TWX 710-348-0564
FAX (508) 695-6076



MINI-SYSTEMS, INC., thick/thin film chip resistor components are ideally suited for the fabrication of microelectronic circuits where tight resistance tolerance, wide range of resistance values, or short production runs make the conventional screening and firing of thick/thin film resistance networks too costly. MINI-SYSTEMS, INC., chip resistors are made from a carefully engineered selection of materials. Geometries are mechanically precise and uniform. Careful testing and inspection result in the highest quality resistors.

STANDARD "MSR" SERIES

- Sizes available: .020″×.040″ up to .661″×.494″.
- PDIS Rating: 40mW to 15W.
- Resistors manufactured with palladium silver or platinum gold with or without nickel plating.
- Tolerances available: ±.5%, 1%, 2%, 5%, 10%, and 20% for most resistance values.
- All types available in untinned versions for conductive epoxy attachment.
- Hi-Rel screening available on all resistor types.
- Backside metallization available upon request.
- "Flip Chip" resistors are solder tinned (SN-62, SN-60, SN-63).
- Wire bond resistors have gold metallization optimized for wire bonding.
- Sandwich metallization standard on all wraparound resistors.
- Over 150 styles readily available.
- Also available untrimmed for in-circuit trimming.

ESTABLISHED RELIABILITY QPL MIL-R-55342 CHIP RESISTORS FOR ALL CRITICAL APPLICATIONS

- Sizes 55342/1 through /9
- Terminations Available: B, R, S, W, T and U
- Tolerances Available: 1.0, 2.0, 5.0, and 10.0%
- Meet or exceed Characteristic K
- Life Failure Rates: M, P, and R
- Delivery: Typically stock to 4 weeks
- Anti-Static Tape & Reel Available

THIN FILM

STANDARD AND CUSTOM HIGH RELIABILITY RESISTORS

MSTF SERIES - Standard Chip Resistors, 20×20 mils, 30×30 mils, and 40×40 mils.

CUSTOM NETWORKS - Designed and Fabricated to Customer Specifications

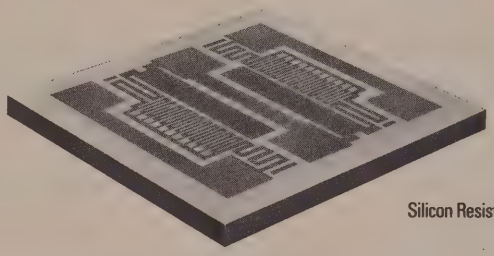
WRAPAROUND RESISTORS - Surface Mountable

METALLIZED SUBSTRATES - Photoetchable Blanks

MOS CAPACITORS - Compact, High Performance

ATTENUATORS - T, π, and Surface Mount Styles

MICROWAVE RESISTORS - Superior Frequency Response



Silicon Resistor

- Resistors - Nichrome, Tantalum Nitride or Sichrome
- Substrates - 99.6% Alumina Ceramic, Silicon, Quartz, Glass, Beryllia, or Aluminum Nitride (all with Gold Back option)
- Resistance Values - RETMA series and 1Ω to 1GΩ (style dependent)
- Tolerances - To 0.01% ΔR/R with Ratio Matching to 0.01%
- Temperature Coefficient of Resistance - To 10ppm for NiCr on Silicon, 25ppm for TaN on Silicon. TC Ratio Matching to 2ppm
- Bonding Pads - Wire Bondable Gold (20KAngstroms typ) or Aluminum (15KAngstroms), also Solder Tinned configurations
- Power Rating - 250mW standard, Higher power designs available
- Stability - 0.25% ΔR/R typical on 1000hr., 125C, 25mW performance
- Current Noise - -20dB typical
- Frequency - To 20GHz, (resistor geometry dependent)
- Stray Distributed Capacitance - Material dependent, <0.08pF with Alumina/TaN to 0.02pF for Quartz/NiCr
- Microwave Attenuators - 1dB to 24dB, Surface Mount Style available
- MOS Capacitors Values - From 4.7pF to 1000pF with TCC 25ppm
- Metallized Substrates - For optimum photopatterning, TaN/TiW/Au standard, other metallizations available
- Trimmable - Designed for customer active Xenon or YAG laser trim
- Visual Inspection - Mil-Std-883 with full lot traceability. Consult factory for technical and custom assistance

THICK/THIN MULTILAYER SUBSTRATES/ HYBRID MICROCIRCUITS

MINI-SYSTEMS, INC. has the latest materials technology processing capabilities for thick film and thin film multilayer substrates/monolithic substrates, and custom resistor networks coupled with complete facilities for hybrid assembly, packaging, and testing. Fully automatic wire bonders and fully automatic laser trim systems give substantial production quantity capabilities.

Check our other divisions for hermetic packages, custom hybrids, and multi-chip modules.

SPECIFICATIONS

Electrical

Temp. Range: −55°C to +125°C

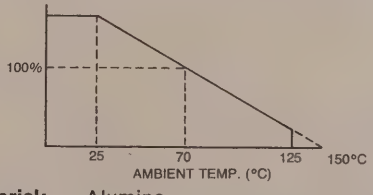
Resistance Range: 22Ω to 1MΩ

Resistance Tolerance: ±1%(F), ±2%(G), ±5%(J)

Temp. Coefficient: ±200 ppm/°C max. (±100 ppm/°C max. on special order)

Power: 100% at 70°C. Maximum ambient temperature at 0 Watt is 125°C.

Power Derating Characteristics:



Mechanical

Substrate Material: Alumina

Resistor Material: Cermet, thick film

Lead Pull Strength: 2 lbs.

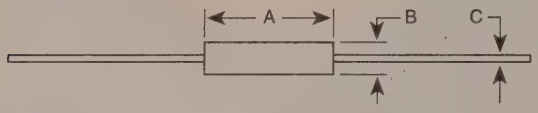
Axial Resistors - Low Ohm - Fusible - Economical

OHMITE® Manufacturing Company

Axial Lead
WP Series
Phenolic Molded Axial Lead
Wirewound Resistors
5% Tolerance



FEATURES

- Molded construction
- Hot-clamp termination
- Dense packaging
- Insulated

Ideal for automatic insertion. Molded jacket allows direct PCB contact.

IEC Color Code Markings.

SPECIFICATIONS

MATERIAL
Coating: Thick phenolic
Core: Fiberglass
Terminals: Solder coated axial lead
DERATING:
Linearly from 100% @ 50°C to 0% at 185°C.

ELECTRICAL
Tolerance: ±5% (10% available)
Power Rating: Based on 50°C free air rating
Overload: 10 times rated power for five secs.
Dielectric withstanding voltage: 700 VAC (VRMS): 1.0 watt rating
1000 VAC: 2.0 watt rating

Power rating (watts)	1.0	2.0

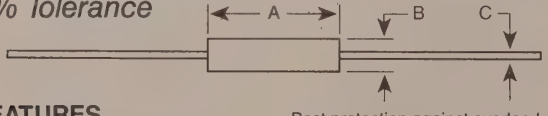
(mm)	3.6	5.7
Diameter C (in.)	0.03	0.04
(mm)	0.8	1.0

Axial Lead Fusible
WF Series
Phenolic Molded Axial Lead
Wirewound Resistors
5% Tolerance



FEATURES

- Failsafe and flame retardant
- Molded construction
- Hot-clamp termination
- Insulated

Best protection against overload circuits.
IEC Color Code Markings with 5th band (blue) indicating flame retardant type.

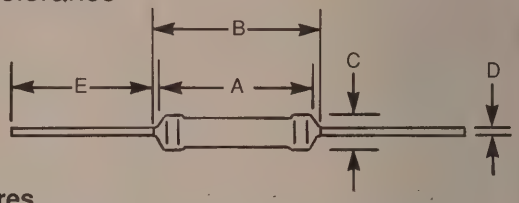
PowrFilm® Metal Alloy Film Resistors 5% Tolerance



Features

- High power to size ratio.
- Economical.
- Endures continuous full loading with very little change in value over time.
- Excellent applications where compact, space saving resistors are required.

Specifications

MATERIAL
Coating: Non-flammable silicone.
Core: High grade ceramic.
Terminals: Solder coated axial lead.
Weight: PFI .40 gms; PF2 .91 gms.

ELECTRICAL
Tolerance: ±5%
Power Rating:

Series Number	PF1		PF2	
	Watts	Ohms	Watts	Ohms
Power At 25C° Ambient	2.0	≤27K	3	≤51K
	1.5	>27K	2.4	>51K
Power At 70C° Ambient	1.6	≤27K	2.5	≤51K
	1.2	>27K	2.0	>51K

Type	A Max Length	B Clean Lead To Clean Lead	C Max Diameter	D Lead Diameter	E Lead Length

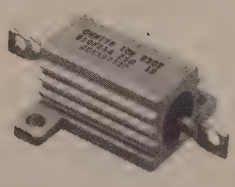
89 Type

Metal-Mite® Aluminum Housed Axial Lead Wirewound Resistors 1% Tolerance

- **1% and 5% Tolerance**
- **Aluminum Housed**
- **Military Approved**



Features

- **High Stability** ±0.5%Δ R.
- **High power** to size ratio.
- **Metal** housing allows chassis mounting and provides heat sink capability.
- **In accordance** with MIL-R-18546 specifications.
- **Resistors** marked with "MIL" designation and Ohmite stock part number.

MIL-R-type	Watts	Ohmic Range
RE60G	5†	1.0-25K
RE65G	10†	1.0-50K
RE70G	20††	1.0-75K
RE75G	30††	1.0-100K

† Can be rated 7.5 and 12.5 watts respectively.
†† Rated 25 and 50 watts, respectively, by Ohmite.

Ohmite Manufacturing Company, 3601 Howard St., Skokie, Illinois 60076, Tel. 708/675-2600, FAX 708/675-1505

Rheostats (Potentiometers)

Wirewound

OHMITE® Manufacturing Company

Features

- **Potentiometer** and Rheostat applications.
- **Linear** windings on stock models; tapered windings available on a special order basis.
- **Windings** secured to prevent shifting.
- **Fine** graduation of control.

Standard Mounting

Model	Description
C, E	Panels to 1/8" (max.) thickness with 1/4—32 bushing and hex nut. Non turn lug requires 1/8" hole 1/4" below shaft center.
H, J, G, K, L	Panels to 1/4" (max.) thickness with 3/8—32 bushing and hex nut, (or with 10-32 × 3/4" F.H. screws for Model L only. Non turn lug requires 3/16" hole 1/2" below center of shaft, does not apply to model L.
P, N, R, T, U	Panels to 1 1/4" (max.) thickness with 1/4—20 flat head screws.

Ohmite Manufacturing Company, 3601 Howard St., Skokie, Illinois 60076, Tel. 708/675-2600, FAX 708/675-1505

A COMPANY OF VISHAY OHMTEK

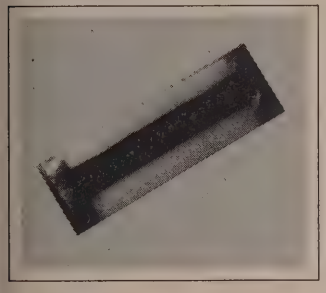
Surface Mount Resistors Chips/Networks

THICK FILM WRAPAROUND CHIP RESISTORS
Mil-R-55342, Char. "K"
TCR to ±100 ppm/°C

- Greater design flexibility
- Resistance range: 10 Ω to 10M Ω
- Tolerances to 1%
- Several standard sizes (including 1206)
- Customs available
- Wave or reflow mounting
- Auto placement compatibility
- Tape and reel or bulk packaging

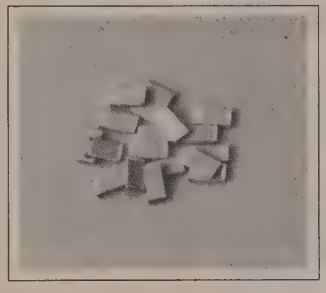
PRECISION THIN FILM WRAPAROUND CHIP RESISTORS
Mil-R-55342, Char. "E"
TCR to ±25 ppm/°C

- Resistance range: 100 Ω to 1M Ω
- Tolerances to 0.1%
- Standard sizes (including 1206)
- Ideal for high frequency, low noise, and tight TCR applications requiring good stability



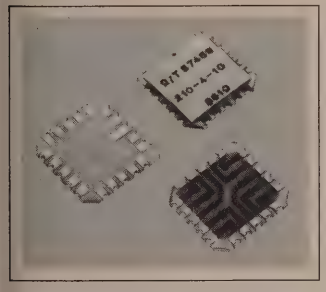
ULTRA-HIGH VALUE CERMET WRAPAROUND CHIP RESISTORS

- High ohm resistance range: 10M Ω to 500M Ω
- Tolerances: 5%, 10%, 20%
- Standard sizes available
- Bulk or tape and reel packaging
- Economically priced industrial grade features



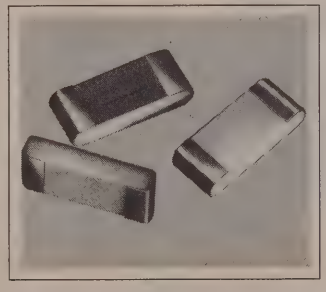
PRECISION THIN FILM WRAPAROUND CHIP RESISTORS

- TCR ±25 ppm/°C and ±50 ppm/°C
- Resistance range: 10 Ω to 1M Ω
- Tolerances: 0.1% to 10%
- Standard sizes: 0505, 0705, 1005, 1206, 1505, 2205, 2010, 2512
- Pre-tinned or gold over nickel barrier
- Tantalum nitrite resistor film available



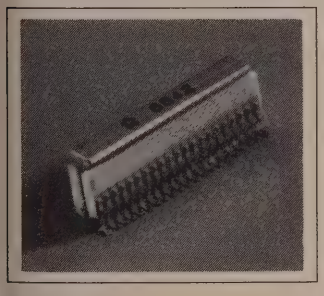
LEADLESS CHIP CARRIERS
Designed to meet Mil-R-83401
Characteristic "K", "M"
TCR to ±100 ppm/°C

- Saves board space and reduces assembly costs
- Wide resistance range: 10 Ω to 1M Ω
- Tolerances to 1%
- 14 thru 28 terminals (20 standard)
- JEDEC standard "A" & "B" schematics or custom circuits
- Glazed overcoat or ceramic cover
- Auto placement compatability



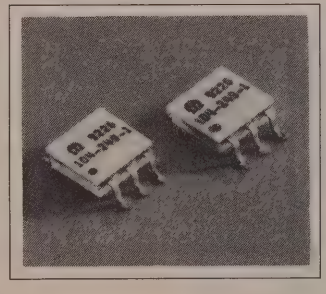
ULTRA-LOW VALUE WRAPAROUND CHIPS

- Low ohm resistance range: 0.05 Ω to 10 Ω
- Precision tolerances for current sensing applications
- Good stability— TCR better than ± 100 ppm/°C
- High power: up to 0.5 watt/+75°C
- Standard sizes: 0505, 0705, 1005, 1206, 1505, 2205, 2010, 2512
- Wave or reflow mounting
- Solder coating with nickel barrier



CUSTOM SURFACE MOUNT NETWORK

- Thermal compression bonded lead attachment
- 42 leads per package
- 25 mil pitch
- Unique intergrated construction



PRECISION SMALL OUTLINE RESISTOR NETWORK
TCR ±25 ppm/°C

- Wide resistance range 100 Ω to 100K Ω
- Tracking ±5 ppm/°C
- Rugged molded case construction
- Tolerances to 0.05%
- Maximum voltage 100 V
- Compatible with auto-placement equipment
- Standard circuits available

Features

- All wraparound connections feature a thin film adhesion layer covered with a leach-resistant nickel barrier layer and solder coated for +150°C applications.
- Ruthenium-based cermet thick film yields dependable performance and low cost.
- Hi-Rel screening available on all resistor types with all Mil-Spec Qualification testing in-house.
- Special metalization and custom sizes available upon request.
- Tape and Reel or static free waffle pack packaging is standard.
- Non inductive.
- Glass fired passivation as standard adds reliability and stability to the resistor elements.

Performance/Design Characteristics

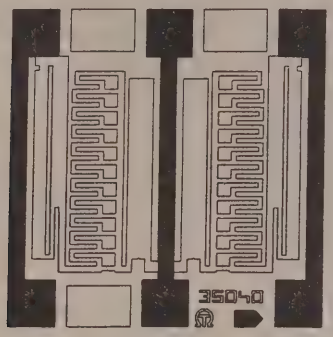
- Tolerances: ±0.1% to ±20%
- Resistance values: 0.1 ohm to 500 megohms
- TCR: Thin Film: ±50 ppm/°C (standard)
  Thick Film: ±100 ppm/°C (standard)
- Operating temperature range: –55°C to +150°C

2160 Liberty Drive ■ Niagara Falls, NY 14304 ■ (716) 283-4025 ■ FAX (716) 283-5932

A COMPANY OF VISHAY OHMTEK

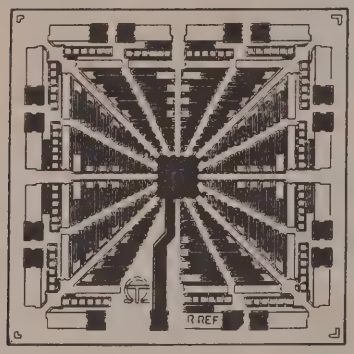
Hybrid Microelectronic Resistor Wire Bondable Products

Thin Film Wire Bondable Chip Resistors



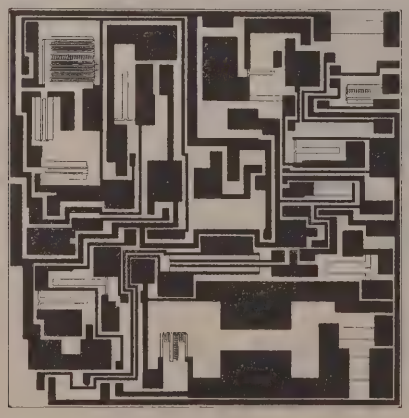
- Standard single value and center tap style
- Gold or aluminum terminations
- 4.7 Ω to 1M Ω resistance range
- Silicon or alumina substrates
- Off the shelf availability
- Custom values available

Thin Film Resistor Networks



- Custom resistor design
- Standard schematic available
- Tantalum and Nichrome based films
- Silicon and alumina substrates
- User trimmable networks available

Thin Film Hybrid Substrates



- Custom layouts
- 15 and 25 mil alumina substrates
- Nickle barrier metalization available
- Resistor/conductor or conductor only
- Back side metalization available
- User trimmable substrate available

- **Visual inspection per MIL-S-833, method 2032 class B**
- **Testing per MIL-S-883, method 5008 class B**
  MIL-R-55342 group A, B and C
- **Quality system per MIL-S-790**

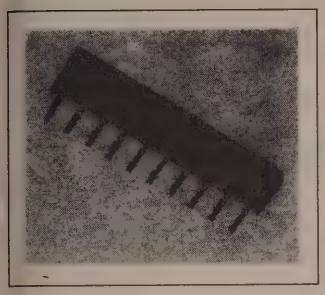
2160 Liberty Drive ■ Niagara Falls, NY 14304 ■ (716) 283-4025 ■ FAX (716) 283-5932

A COMPANY OF VISHAY OHMTEK

Precision Resistor Networks

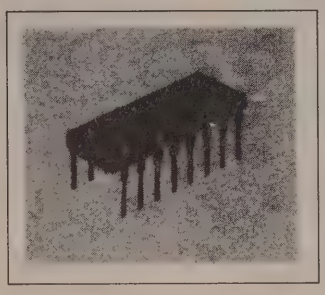
Close Tracking — Tight Ratio Tolerance

Rugged Construction Provides Dependable Performance at Minimum Cost



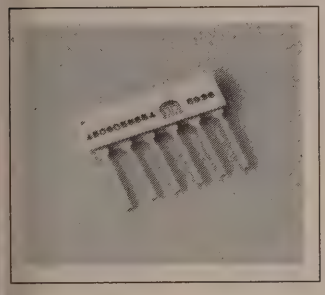
SINGLE-IN-LINE MOLDED

- Meets MIL-R-83401 characteristics "V" and "H"
- 6, 8 and 10 lead molded construction
- High and low profile available
- Thermal compression bonded lead attach



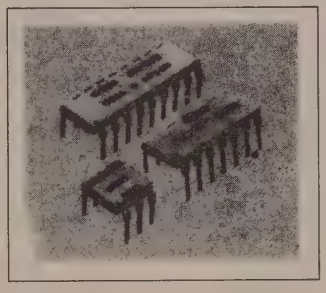
DUAL-IN-LINE HERMETIC

- Meets MIL-R-83401 characteristic "C"
- 8, 14, 16, 18 and 20 lead packages available
- Chip and wire construction



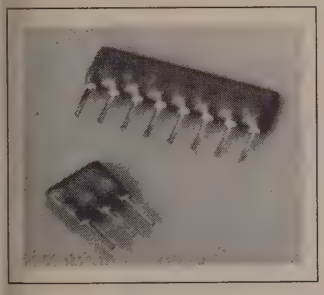
SINGLE-IN-LINE CERAMIC SANDWICH

- 3 – 10 lead packages
- Thermal compression bonded lead attach
- High and low profiles



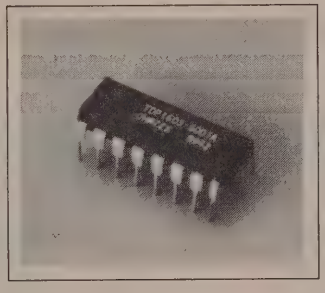
DUAL-IN-LINE CERAMIC SANDWICH

- Rugged monolithic construction
- 4 – 20 leads available
- Thermal compression bonded lead attach
- Wide resistance offering



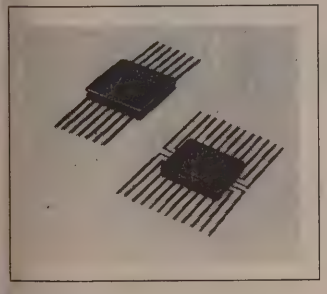
SINGLE-IN-LINE CONFORMAL

- 3 – 13 lead packages available
- Standard and custom circuits
- Off the shelf standards available
- Low cost precision circuits available



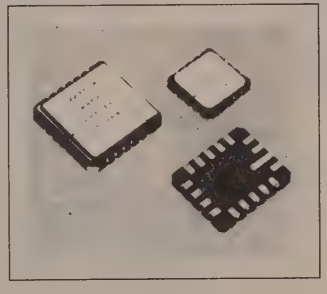
DUAL-IN-LINE MOLDED

- Low cost standard circuits avalable
- 14 and 16 lead packages standard
- Off the shelf delivery



FLATPACKS

- Hermetic and ceramic sandwich construction
- 14 and 16 terminal packages standard
- Meets MIL-R-83401 characteristics "C", "V" or "H"



LEADLESS CHIP CARRIERS HERMETIC

- Hermetic JEDEC packages
- 16, 20 and 24 terminal packages standard
- Standard and custom circuits available
- Meets MIL-R-83401 characteristic "C"

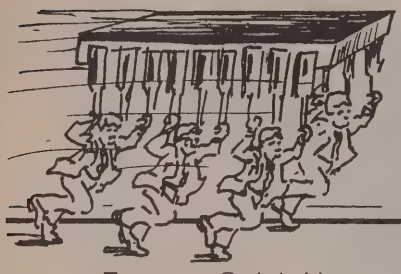
Features

- Standard and custom circuits as required for demanding military and commercial applications
- Tracking less than 1 ppm
- Operating temperature range: –55°C to +125°C
- Low Noise: –35 dB
- Full mil-spec screening available in-house
- Tolerances: 0.005% to 1%
- Resistance values: 10 ohms to 10 megohm
- Low TCR: 25 ppm/°C typical
- Nichrome or Tantalum based films optional

2160 Liberty Drive ■ Niagara Falls, NY 14304 ■ (716) 283-4025 ■ FAX (716) 283-5932

A COMPANY OF VISHAY OHMTEK

Custom Thin Film Networks in 2 weeks with no NRE charges.



Our superior engineering capabilities enable us to provide the industry's shortest delivery time for prototypes. Let the Ohmtek Quick-Net team help you speed your prototypes to qualification. Quick-Net high quality networks are available in a variety of package formats including Single-In-Line, hermetic DIP, flatpack, and leadless chip carriers.

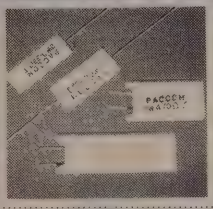
Resistors

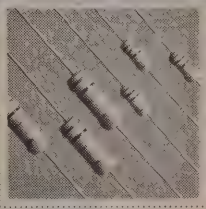
WRH/WRP
SILICON COATED WIRE WOUND

Resistance Range: 0.5Ω to 6.8KΩ
Rated Power: 1W to 20W
Temp. Coefficient: ±260 PPM/°C
Operating Temp: +70°C to +250°C
Max Overload Voltage: 10 X Rated Power for 5 Sec.
Tolerance: ±2% (G), ±5% (J)
Construction: Silicon Coated Wire Wound
Tape & Reel/ Ammo Pack: Available



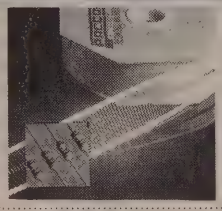
WCR/WCRR
WIRE WOUND CEMENT

Resistance Range: 0.15Ω to 2KΩ
Rated Power: 2W to 20W
Temp. Coefficient: ±250 PPM/°C to ±400 PPM/°C
Operating Temp: –25°C to +275°C
Max Overload Voltage: 1000V
Tolerance: ±2% (G), ±5% (J)
Construction: Wire WOund Cement
Tape & Reel/ Ammo Pack: Not Normally Available



MOR/MOF
METAL OXIDE FILM

Resistance Range: 0.5Ω to 500KΩ
Rated Power: 0.5W to 7W
Temp. Coefficient: ±350 PPM/°C
Operating Temp: –25°C to +235°C
Max Overload Voltage: 400V to 1000V
Tolerance: ±2% (G), ±5% (J)
Construction: Metal Film
Tape & Reel/ Ammo Pack: Available



RN
METAL FILM

Resistance Range: 5Ω to 100 MegΩ
Rated Power: 125W to 2.0W
Temp. Coefficient: ±50 PPM/°C or ±100 PPM/°C
Max Overload Voltage: 300V to 1000V 5 Sec.
Tolerance: ±2% (G), ±5% (J)
Construction: Metal Film & Metal Glaze
Tape & Reel/ Ammo Pack: Available

SRD
CARBON FILM

Resistance Range: 1Ω to 22 MegΩ
Rated Power: 125W to 2.0W
Temp. Coefficient: –350 to +1000 PPM/°C
Operating Temperature: –55°C to +155°C
Max Overload Voltage: 400V to 1000V
Tolerance: ±2% (G), ±5% (J),
Construction: Carbon Film
Tape & Reel/ Ammo Pack: Available

RA
NETWORKS

Resistance Range: 1Ω to 10 MegΩ
Rated Power: 125W per element
Temp. Coefficient: ±200 PPM/°C
Operating Temp: –55°C to +125°C
Max Overload Voltage: 200W
Tolerance: ±1% (F), ±2% (G)
Construction: Conformal Coated Networks
Tape & Reel/ Ammo Pack: Not Available

Surface Mount (SMT)

RM
RESISTOR SURFACE MOUNT

Resistance Range: 4.7Ω to 1 MegΩ
Rated Power: 0.100W to 0.25W
Temp. Coefficient: ±300 PPM/°C to ±500 PPM/°C
Operating Temp: –55°C to +125°C
Maximum Overload Voltage: 200V to 300V
Tolerance: ±1% (F), ±2% (G), ±5% (J)
Construction: Thick Film
Tape & Reel: Standard

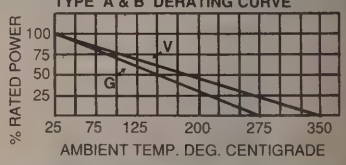
TYPE A & B DERATING CURVE



Type B Molded - Exceptional Power to Size Ratio
.4 to 10 Watts

These Resistors feature from 1.4 to 4 times HIGHER POWER RATINGS than conventional resistors of equivalent size. In addition to having all of the features of our Type A resistors, Type B resistors have Solid Beryllium or Alumina cores to provide exceptional power dissipation.

PRECISION POWER RESISTORS

CHASSIS MOUNT - ALUMINUM FINNED HEAT SINK - MIL QUALIFIED

PACIFIC RESISTOR CO.

PHONE (818) 345 - 7811 (800) 835 - 3355 FAX (818) 345 - 1507

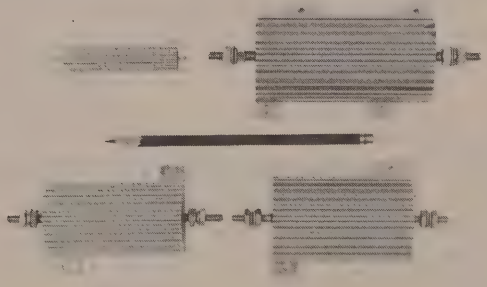
Pacific's Chassis Mount type CH Resistors are designed for maximum heat dissapation by mounting to metal chassis surfaces for maximum heat transfer. These Superbly RELIABLE resistors are outstanding for their high power dissipation with precision tolerances in minimum physical sizes. FAST DELIVERY TIMES! MIL-R-18546 Qualified. PACIFIC HAS BUILT QUALITY WIREWOUNDS FOR 40 YEARS!

Type CH Chassis Mount
5 to 250 Watts - MIL-R-18546

Type BCH - Exceptional Power to Size Ratio
15 to 35 Watts - Solid Beryllium Core

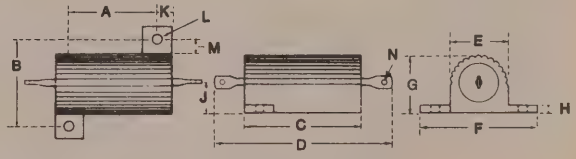
Electrical

- **Long Stable Load Life**
- **Non Inductive Styles Available**
- **Tolerances:** 5%,3%,1%,.5%,.25%, .1%,.05%
- **Temperature Coefficient:**
  90 PPM< 1 ohms, 50 PPM<10 ohms, 20 PPM>10 ohms
- **Special TC's Available**
- **Dielectric Strength:**
  1000 VRMS-5CH,10CH,B5CH,B10CH
  2500 VRMS-25CH,50CH,100CH,B25CH
  5500 VRMS-ALL OTHERS
- **Insulation Resistance:** not<1000 Meg



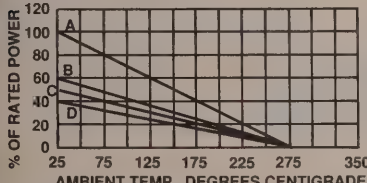
Mechanical

- **Body:** Anodized-Aluminum finned
- **Core:** Type CH- Ceramic, Type BCH - Beryllium
- **End Caps:** Stainless Steel
- **Leads:** Heavy Spaded Lugs - 5 to 70 Watts
  Threaded Stud Terminals- 100 to 250 Watts
- **Construction:** Completely Welded



5CH, 10CH, 25CH, 50CH, 100CH, B5CH, B10CH, B25CH

Derating Curves



Derating is required for reduced chassis mounting area and high ambient temps.
A - When Mounted on proper alum. chassis
5CH,B5CH,10CH,B10CH - 4x6x2x.040 alum.
25CH,B25CH - 5x7x2x.040 alum. chassis
50CH,100CH - 12x12x.059 alum. panel
110CH,180CH,250CH - 12x12x.125 alum. panel
B - Unmounted 5CH, B5CH, 10CH, B10CH
C - Unmounted 25CH, B25CH, 100CH, 110CH
D - Unmounted 50CH, 180CH, 250CH

Four - Terminal Molded Resistors

Available in a wide range of values and wattages, these resistors are extremely useful in Low Resistance Current-Shunting and Current-Sensing applications where Voltage - Current relationships(i.e.resistance) needs to be accurately specified and be independant of leads resistance effects. PACIFIC'S ALL MOLDED Construction provides for Exceptional moisture resistance and strenght! *CUSTOM DESIGNS AVAILABLE*

Electrical

- **Non Inductive Styles Available**
- **Matched Sets Available:** Tracking to .5 PPM
- **Tolerances:** 5%,3%,1%,.5%,.25% .1%,.05%,.02%,.01%
- **Temperature Coefficient:**

SMD® RESISTORS

Airport Road, P.O. Box 760 Mineral Wells, TX 76067 (817) 325-7871

SERIES 9C COMMERCIAL CHIP RESISTORS

SMD (chip) resistors consist of a ceramic body (alumina) on which is deposited resistive paste. Variations in the composition of the paste result in different resistant values. A wrap around termination is deposited at each end of the resistor to allow reflow or wave soldering. The resistive layer is covered with a protective coating to assure mechanical and environmental integrity.

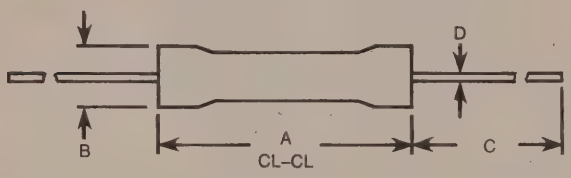
PRECISION POWER FILM RESISTOR METAL FILM

.05% to 5% Tolerances
1, 2, 3 and 5 Watt
(25°C) Power Rating

DESCRIPTION

The PPR5000 series is a precision power film that achieves the inherently low inductance and reliability of metal film resistors and the stability and power handling capability of wirewound resistors.

DIMENSIONS



FEATURES

- **Low Inductance**
- **Excellent Stability**
- **Small Size**
- **Tight Tolerances**
- **Low TC's**

(2) Value below 10 ohms will have TC of ± 50 PPM.
(3) .040″ wire available upon request.

PICONICS THICK AND THIN FILM RESISTOR CHIPS

Piconics manufactures high quality Thick and Thin Film Resistor chips and custom networks.
Our products are produced utilizing the latest in automatic lasers, fast cycle sputter and E-Beam equipment, precision photolithographic machinery and dicing tools all under environmentally controlled conditions. Both NICHROME AND TANTALUM NITRIDE resistors are available using various conductor combinations with both suitable for wire bonding or soldering (SMD). Piconics specializes in products on BERYLLIA and Aluminum Nitride. Custom layouts, designs, test requirements, and non-standard performance specifications are welcome. All products are manufactured to meet the requirements of MIL-STD-883, MIL-R-55342, MIL-Q-9858, and all other pertinent military specifications. Our Specialties are Wraparound Thick/Thin Film Resistors and high power chips up to 20 watts dissipation. Group A, Group B and Group C testing available.

Note: Other Sizes Available.

Available

1. Nichrome or Tantalum Nitride Thin Film
2. Passivation or Glassivation
3. Aluminum conductor
4. Tolerances below ± 1%
5. Specific TCR's
6. High Temp Operating Capabilities
7. Custom Testing
8. Nickel Barrier on all wraparounds

CUSTOM THIN FILM COATINGS

Piconics is equipped to provide custom THIN FILM coatings as a product or service. Our Cryo Pumped In Line Auto Sputter and Fast Cycle E-Beam capability together with peripheral controls gives Piconics a broad range of Film Capabilities. We provide coated substrates of Alumina, Beryllia, Quartz, Aluminum Nitride, Glass with materials such as Gold, Aluminum, Nichrome, Tantalum, Nickel, Chrome, Titanium/Tungsten, Silicon Nitride, Silicon Dioxide, Palladium, Titanium, Copper, and others upon request.
NOTE: Tantalum and Nichrome coating to your Specified Sheet Resistivity and TCR. Process assistance provided.

General Performance Specifications

Property	Conditions	Thin Film	Thick Film
Temp Coefficient	—55°C to + 150°C	Nichrome 0 - 50 PPM Tantalum 0 to 59 ppm	0± 100 ppm Typ.
Temp Track (Networks)	—55°C to + 150°C	1 - 2 ppm typ.	5 - 10 ppm typ.
Noise*	MIL-STD-202 M 308	−20 dB to −35 dB	+10 dB to −30 dB
Voltage Coefficient	—	<.1 microvolt/volt	0.1% / volt typ. (depending on value)
Value Range	—	0.1 ohm - 5 meg. (Higher as Custom)	.1 ohm - 100 meg.
Operating Voltage	Typical 100 V.	Layout/Value dependent	Layout/Value dependent
Stability	1000 hours +125°C w/Power	±0.3% Max. Δ R	±0.5% Max. Δ R
Short Term Overload	2.5x Max Rated Current	.2% Max	±.25% Max.
Moisture Resistance	MIL-STD-202 M106	.2% Max.	±.25% Max.
Thermal Shock	MIL-STD-202 M107	±.15% Max.	±.25% Max.
Solder Exposure	300°C−30 sec.	±0.4% Max. ±.25% Max.	±.25% Max.
High Frequency	Layout/Film dependent	to 20 GHz	To 5 GHz
Power Rating: ** Alumina Berylia+Aluminum Nitride Silicon	Size Dependent	50mw to 5w 200mw − 20w 200mw − 20w	50mw to 15w 200mw to 20w N.A.
High Temp Exposure	150°C, 100 hours	±.25% Max.	±0.25% Max.
Resistance to Bonding	—	±.1% Max.	±.25% Max.

Notes: 1. TCR may be "tailored" at times to meet needs to ± 5ppm.
2. High Temperature Resistors available to operate at up to +300°C.
3. Operating Voltage may be custom designed to 1200V.
4. Parts inspected to MIL-STD-883 Method 2010/2017/2032 Level B.
5. Testing meets MIL-R-55342 Requirements.
6. Custom Requirements Welcomed.
7. Wraparounds available on most sizes for Surface Mounting.
8. Silicon Dioxide Passivation available on Thin Film and Glassivation on Thick Film (Moisture Barrier).

*The Johnson Noise level is dependent on Resistor value and film sheet resistivity with lower noise levels found on lower resistivity Films.
**Derate Power from Max at 70°C to zero at 150°C

CUSTOM LASER SERVICES

Our In-House Tooling/Probe Card assembly and YAG Laser Systems provide customers with resistor trimming of THICK AND THIN FILM circuits on a rapid turn-around basis. We can process prototype quantities or large production runs rapidly to provide our customers with a "panic" turnaround or back-up to their own shop. Piconics is equipped for passive or active trimming of thin or thick film materials automatically, semi-automatically or manually. In addition our CO_2 laser provides custom ceramic machining and hole drilling. (Including Beryllia)
Piconics provides low impedance plated through holes in Thick or Thin Film products.

CUSTOMIZED RESISTOR SETS AND NETWORKS

Because of the high consistency and uniformity of the film deposition process and the high, repeatable accuracy of automated trimming equipment, descrete film resistors are available in matched pairs, multivalue sets and discrete networks with high precision and very dependable performance at reasonable cost. Resistance values, tolerances, temperature coefficients, as well as the matching and/or tracking of these parameters, can be specified and meet to exceptionally high degrees. The optimum range for the tightest requirements is 100 ohms thru 100,000 ohms, but 10 ohms thru 1 megohms is a practical range for less stringent requirements.

NOTE:
Cost savings can be realized when relatively tight matching requirements are specified while permitting the absolute parameters of the discrete resistor to have more relaxed specifications.

Application engineers are available to assist you in specifying your requirements in the most economical way possible.

Please contact the factory for complete information.

GENERAL SPECIFICATIONS	
Nominal Resistance	10 ohms thru 1 megohm
Resistance Tolerance	±1% thru ±0.01%
Wattage	1/20 watt thru 1 watt
Temperature Coefficient	±100 PPM thru ±5 PPM
Resistance Matching	±1% to ±.005%
Temperature Coef. Tracking	±50 PPM/°C to ±1 PPM/°C

PACKAGING

Matched sets are individually packaged in coin envelopes and identified by customer part number.

Discrete resistor networks are available in S.I.P. and D.I.P. configurations and can be customized in an infinite variety of shapes and sizes to meet customer requirements.

"Profit from PRECISION" Power 2-terminal Type SM Resistors:

- For "hard-to-find" power applications.
- 0.02 ohm to 4 Megs (tols. to ±0.05%).
- TCR char: 0±10ppm/°C. (100 ohms and above).
- Stability: To ±0.005%/yr. (Shelf Life)
- 0.125W to 10Watts at 25°C.
- Voltage ratings: To 1250V.
- Temperature span: –65°C. to +275°C.
- Low EMF vs. copper lead construction.
- No minimum quantities required.
- Purchasing information - please specify: Quantity, PRC type, resistance value, tolerance, TCR char. - delivery and special features that may apply.
- Ask about SM-4 four terminal designs.

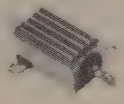
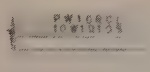
WORLD'S WIDEST RANGE OF RESISTORS: 0.0002Ω TO 2×10^{14}, TO ±0.0005% ¼ PPM/°C, UP TO 1000W 300KV!
APPROXIMATELY ½ BILLION PIECES IN STOCK! CONTACT FACTORY FOR NEW 78 PAGE CATALOG.
MOST PRODUCTS AVAILABLE ON EXCUSIVE "SWIFT™" PROGRAM (1-week delivery) IF UNAVAILABLE FROM STOCK!

Precision Wirewound Resistors
SA: .05Ω-25M, ⅛-2W, to ±0.005%, 2ppm
MA: Mini sizes, 1/20-½W, .05Ω-1.2M
Q: Economy .01% to .5%, 1/10-1W
PC: Radial lead, .15W-1W, .05Ω-2M

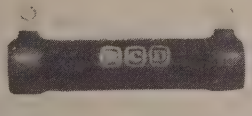
Power Wirewound Resistors
100: ½-50W, .01%-10%, .005Ω-1M
200: Mini sizes, 1W-10W
RW: Economy 1W-3W



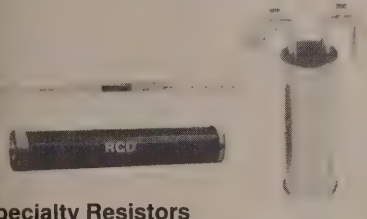
Chassis Mount Wirewound
600: 5W-1000W, .005Ω-250K, .01%-5%
600L: Insulated leadwires, 10W-50W



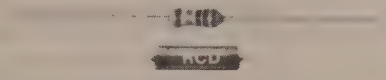
Ceramic Encased Resistors
PW: Axial lead, 2W-25W, low cost
PWB: Mini sizes, 3W-10W
PV: Radial lead, 2W-10W
PWV: Vertical mount, 5W-25W
ULV: Ultra low value, to .005Ω 0.5%
LVF: Four terminal, as low as .0005Ω



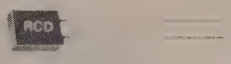
Tubular Power WW Resistors
TL: 5-500W, 0.1Ω-500K, 1%-10%
TLA/TLR: Axial or Radial lead
TLV/TLT: Adjustable & tapped versions



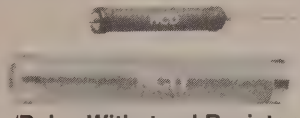
Specialty Resistors
A: Resistance standards to ±0.0005%
RG: Metal glaze, up to 20KV, 1M-10GΩ
RH: Precision high-megohm, to 0.1% 10ppm
UHV: Ultra high value to $2 \times 10^{14}\Omega$
SR: High power thick film, to 250W 300KV
HF: High frequency to 10GHZ
ZJ: Zero-ohm jumpers, 2A-20Amp



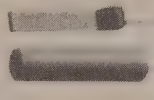
Carbon & Metal Film Resistors
CF/CFS: Carbon film ⅛-3W & mini sizes
MF/PMF: Precision 1Ω-22M, to .01% 5ppm
HM: Hermetic sealed MF, 1/20W-5W
GP/GPS: Low cost MF, mini sizes, ⅛-2W



Precision Radial Resistors
HP: Ultra precision foil to .01% ¼ppm
VS: .3W-2W, .005%-1%, 10Ω-10M
BC: High megohm up to 1000M



Surge/Pulse Withstand Resistor
PCN: Ceramic comp., 2-270W, 14-30Kjoule
P: Low cost, lightning/cap discharge, failsafe



Temp. Sensitive Resistors/RTD'S
PTF: Platinum thin film, 100/500/1K, 640°C
PTC: Wirewound RTD elements, Pt/Ni/Nife
PTS: RTD probes with metal sheaths, 500°C
ATB/ATS: WW, +80 to 6000ppm, .1Ω-1M
LP: Econ. film, +150 to 7000ppm, 1Ω-100K
LPT: Economy platinum, 10Ω-500Ω, 300°C

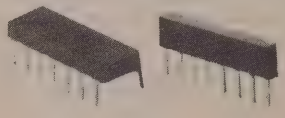
Inductor Chokes/Coils
AL: Economy, 3 sizes, .1µH-2.2mH
P/PF: Molded or shielded, .1µH-10mH
CA/CH: High current chokes, 1A-20A
HVI: High values 1mH to 2H
LE/ST: Ethernet, starlan pulse transformer
T: Toroidal inductors, transformers

Delay Lines
SA: Active SIP, 20-1000ns
A: Active DIP, 10-1000ns
SP: Passive SIP, 5-500ns
P: Passive DIP, 0.1-2000ns
E: ECL Active DIP, 10-200ns
TT: Programmable TTL, 3-8 Bit
EC: Programmable ECL, 3-8 Bit

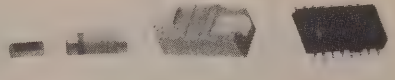
Flameproof Fuse Resistors
BW: Economy film, ¼-3W, .1Ω-100K
FR: Wirewound, ½-50W, .05Ω-25K
TF: Thermal fuse, axial & radial, 1W-60W
TFP: Failsafe pulse withstanding

Microminiature Resistors
MFA: World's smallest, axial, 1Ω-4.7M
MR: Microsize, radial, 4.7Ω-1000M
MG: Mini ½W & 1W are ⅛W & ¼W size

Metal Oxide Resistors
RSF: ½W-10W, 0.1Ω-510K, 1%-5%
RMF: Mini sizes, ½W-7W, .2Ω-150K



Networks/Hybrids
C/CL: Std & low profile thick film SIPs
CLL: Super low profile SIP, .100" Max.
CLL-50/-25: 50-mil & 25-mil pin spacing
CP: Precision thin film SIP
CDN/CSN: Custom DIP & SIP networks
H: SIP, DIP, SM Hybrids, Active & Passive



Surface Mount Products
MC: Thick-film chips, 1/20-3W, 1Ω-22M
MCT: Thick-film chips, Military-grade
BLU: Thin-film chips, to 0.05% 5ppm/°C
MW: Wirewound, 1-5W, .01Ω-25K, .01-5%
MGP/MCF: 1/10-½W, MF & CF MELF's
MHM: Hermetically sealed metal film
HR: High-megohm to $10^{12}\Omega$
SRH: High voltage, 1KV to 5KV
MLP: Temp. sensitive, +450 to 5000ppm
MBW: Flameproof fusible resistors
SF: 4-terminal, 0.001Ω to 25KΩ
SMN/SMTF: Thick- and thin-film networks
SMM: SM thick-film SIP networks
SMN25: Fine pitch, 25-mil networks
SMN2010: Leadless chip networks
CI/MCI: Chip inductors, 5 sizes
MSI: Molded shielded chip inductors
SMA/SMP: Active & passive delay lines
STT: Programmable 3-bit delay lines
SPT: Pulse transformers
SM Kits: 0805 & 1206, thick & thin chips

Refer to EEM Section 1800 for RCD coils & inductors and EEM Section 2350 for RCD delay lines.

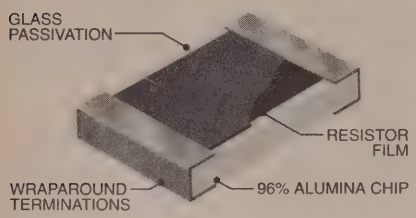
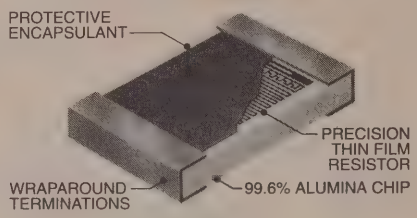
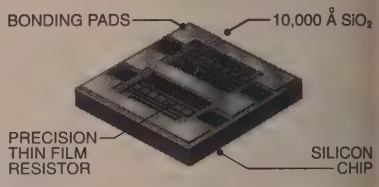
Thick & Thin Film Chip Resistors

State of the Art manufactures the industry's most comprehensive selection of thick and thin film chip resistors for your circuit designs. Regardless of your application, you can readily match type, size, value, tolerance, TCR, and reliability requirements to a SOTA chip. For special applications, we offer 4-pad Kelvin resistors, jumpers, untrimmed resistors, silicon back contact resistors, and multi-tap resistors. Our engineering expertise and advanced manufacturing capabilities ensure exceptional chip performance.

Request our full line catalog for detailed technical and product information.







Thick Film Chip Resistors on 96% Alumina Substrates

- 13 sizes, 0Ω to 30MΩ (standard)
- Tolerances to 0.5%
- TCRs to ±100 ppm
- Power dissipation to 2 watts
- Solderable wraparound, epoxy and wire bondable terminations
- MIL-R-55342 qualified to S level
- Custom designs available

Thin Film Chip Resistors on 99.6% Alumina Substrates

- 12 sizes, 5Ω to 5.6MΩ
- Tolerances to .05%
- TCRs to ±25 ppm
- Power dissipation to 1.5 watts
- Solderable wraparound, epoxy and wire bondable terminations
- MIL-R-55342 qualified to R level
- Custom designs available

Thin Film Chip Resistors on Silicon Substrates

- 4 sizes, 5Ω to 15MΩ
- Tolerances to .05%
- TCRs to ±25 ppm
- Small size, high power dissipation
- Wire bondable or back contact terminations
- High reliability screening
- Custom designs available

The table below summarizes the comparative performance characteristics for our standard and MIL-R-55342 qualified chip resistors. Because all chips are manufactured using the same processes, standard and military specifications for a given test condition are often very close or identical. The distinction between standard and military is made by the rigid screening and testing done to establish that all military qualified parts meet the performance characteristics below. Optional high reliability screening of standard chips is also available.

TEST CONDITION	STANDARD		MIL-R-55342			
	THICK FILM	THIN FILM	E*	H*	K	M
Resistance Range	0Ω-30MΩ	5Ω-15MΩ	5.6Ω-1MΩ	5.6Ω-1MΩ	5.6Ω-15MΩ	5.6Ω-15MΩ
TCR (-55 to +125°C) in ppm/°C	to ±100	to ±25	±25	±50	±100	±300
Max. Ambient Temperature, Full Power	70°C	70°C	70°C	70°C	70°C	70°C
Max. Temperature, Zero Wattage	150°C	150°C	150°C	150°C	150°C	150°C

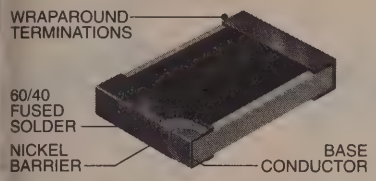
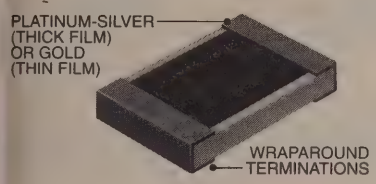
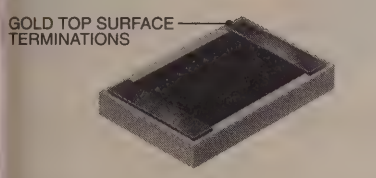
Thick & Thin Film Chip Resistors



Style C
Solderable Wraparound



Style C
Epoxy Bondable Wraparound



Style A
Wire Bondable

These three standard termination styles accommodate the majority of chip resistor applications.

The Style C pretinned solderable wraparound termination provides an exceptionally strong and reliable solder joint for wave solder, vapor phase, reflow, and other solder-based surface mount applications. After attachment, the resistor element is away from the solder joint, face up for easy post-attachment inspection and/or trimming. Three layers make up the termination. The base layer is a high adhesion conductor covered by a nickel barrier to prevent solder joint degradation, such as leaching and diffusion. The outer finish is fused 60/40 tin/lead solder.

The Style C untinned epoxy bondable wraparound termination provides excellent adherence and compatibility with conductive epoxy mounting. After attachment, the resistor element is face up for easy post-attachment inspection and/or trimming. The termination material typically consists of a high conductivity layer of untinned platinum/silver (thick film) or gold (thin film). Other thick film termination materials such as platinum/gold or gold are available by special order. These untinned terminations are *not* intended for use in solder applications.

The Style A wire bondable top surface termination provides strong, high conductivity connections for wire bond applications. Attachment to a circuit board is typically made using epoxy, although bottom metallized chips for solder attachment are available by special order. After attachment, the resistor element is face up for easy post-attachment inspection and/or trimming. The termination pads are gold with an optional aluminum finish available on thin film silicon only. Other termination materials are available by special order.

The table below shows how to specify each of these three standard termination styles and their availability according to chip type. State of the Art also offers variations to these terminations and custom finishes. Please consult the factory for more information.

TERMINATION	STANDARD			MIL-R-55342	
	THICK FILM ON CERAMIC	THIN FILM ON CERAMIC	THIN FILM ON SILICON	THICK FILM ON CERAMIC	THIN FILM ON CERAMIC
SOLDERABLE WRAPAROUND (PRETINNED)	S0504 **CPX** 150J (solder over nickel)	S0505 **CA** 1001FH **B** (solder over nickel)	—	M55342K06 **B** 110DS (solder over nickel)	M55342H06 **B** 110DR (solder over nickel)
EPOXY BONDABLE WRAPAROUND (UNTINNED)	S0504 **CP** 150J (platinum/silver)	S0505 **CA** 1001FH **W** (gold)	—	M55342K06 **C** 110DS (platinum/silver)	—
WIRE BONDABLE TOP SURFACE	S0505 **AP** 150J (gold)	S0505 **AA** 1001FH **W** (gold)	S0505 **AS** 1001FH **W** (gold) or S0505 **AS** 1001FH **A** (aluminum)	M55342K06 **W** 110DS (gold over nickel)	M55342H06 **W** 110DR (gold)

The table below shows the standard resistance values for the 100 to 988 ohm decade for the most commonly used thick and thin film resistance tolerances (0.1% available in thin film only). Do not hesitate to ask for any value that you need.

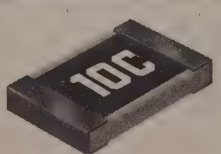
STANDARD 3-DIGIT CODE
Value = 22 kΩ



EIA-96 3-DIGIT CODE
Value = 12.4 kΩ

PART MARKING — Optional chip resistor marking is available for 0705 and larger alumina substrate chips. The most popular method of marking is the standard three-digit code, where the first two digits represent the resistance value and the last digit is the multiplier. An alternate method gaining popularity in the industry is the three-digit EIA-96 method. The first two digits correspond to one of the 96 standard resistance values and the last digit is the multiplier.

Markings are screen printed on the top side of the chip with a polymer based, non-outgassing, fungus resistant ink. Custom coding is available when the chip's size can accommodate it. Laser marking of silicon chips is available on a limited basis.

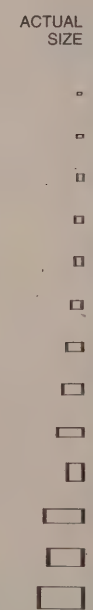
ACTUAL SIZE



Notes

Size 0705 is usually the most economical. Its use is recommended except where its size is excessive or where power and/or voltage ratings may be exceeded.

Size 0504 is available in Styles CP and EP only.

PART NUMBERING SYSTEM

To order standard grade or high reliability thick film chip resistors, follow the part numbering format at the right. **S0504CPX150J** specifies a standard production .050 x .040 inch, 15 ohm ± 5% resistor with pretinned nickel barrier wraparound terminations.

S 0504 CP X 150 J

SPECIAL TERMINATION
G: Gold **PS:** Platinum/silver
Z: Gold over Nickel **PG:** Platinum/gold

TCR CERTIFICATION
10: ±100 ppm **20:** ±200 ppm **30:** ±300 ppm

TOLERANCE
D: 0.5% **F:** 1% **G:** 2% **J:** 5% **K:** 10% **M:** 20%

RESISTANCE VALUE
Three or four digits are used with all leading digits significant. Four digits are used for 1% tolerance or lower, otherwise three digits are used. The last digit specifies the number of zeros to add. The letter "R" is used to represent the decimal for fractional ohmic values. Example: 5R6 is 5.6 ohms; 10R0 is 10 ohms; 16R9 is 16.9 ohms, etc.

X: Pretinned Solder over Nickel
U: Untrimmed resistor (see page 11)

TERMINATION STYLE
AP: Top-side termination with Bottom Isolated
CP: Wraparound
DP: Top-side termination with Bottom Metallized
EP: Single Wraparound with Bottom Metallized

SIZE CODE
See Physical and Mechanical Data

PREFIX
C: Commercial/Industrial (please consult factory)
S: Standard Production
H: High Reliability/Custom Screening

HIGH RELIABILITY SCREENING

We provide optional high reliability screening and testing. Any size or style that we manufacture can be processed and/or tested to meet your reliability requirements. Unless otherwise specified, our standard high reliability program consists of 100% screening and special batch testing according to the Group A and Group B tests established by MIL-R-55342.

PACKAGING

Standard grade individual lot quantities are bulk packed in anti-static self-sealing bags. High reliability (H) resistors are packed in chip tray carriers ("waffle packs"). Tape and reel packaging to EIA RS481 can be specified on a standard 7 inch reel or an optional 13 inch reel for the following sizes:

- 8 mm tape — 0504, 0505, 0705, 1005, 1206, 1010
- 12 mm tape — 1505, 2208, 2010, 2512

OPTIONS AVAILABLE:
- **CTx =** Center-Tapped, x = ratio tolerance. For S0303AS1001JKW-CTF, total R = 1000Ω ±5%, ratio = 1%.
- **MT1 =** Multi-Tap silicon with 7 R1 and 5 R2 configuration, where R1 = 5xR2.
- **MT2 =** Multi-Tap silicon with 10 R1 and 10 R2 configuration, where R1 = 10xR2.

PART NUMBERING SYSTEM

To order standard grade or high reliability thin film chip resistors on alumina or silicon, follow the part numbering format below. The part number **S0505CA1001FHB** specifies a standard production .050 x .050 inch, 1000 ohm ± 1% resistor on alumina with a TCR of ±50 ppm and pretinned solder over nickel wraparound terminations.

HIGH RELIABILITY SCREENING

We provide optional high reliability screening and testing. Any size or style that we manufacture can be processed and/or tested to meet your reliability requirements. Unless otherwise specified, our standard high reliability program consists of 100% screening and special batch testing according to the Group A and Group B tests established by MIL-R-55342.

PACKAGING

Thin film on alumina individual lot quantities are bulk packed in anti-static self-sealing bags. Thin film on silicon and high reliability (H) resistors are packed in chip tray carriers ("waffle packs"). Tape and reel packaging can be specified for the following sizes:

- 8 mm tape — 0505, 0705, 1005, 1206, 1010
- 12 mm tape — 1505, 2208, 2010, 2512

ACTUAL SIZE

MIL-R-55342 qualified resistors must have an established reliability with life failure rates of 1% to 0.001% per 1000 hours. SOTA thick film resistors in all sizes, styles, and terminations for all standard resistance values have been qualified to the S level (0.001% failures per 1000 hours). SOTA thin film resistors are currently qualified to the R level (0.01% failures per 1000 hours).

MILITARY ESTABLISHED RELIABILITY SPECIFICATION MIL-R-55342

PACKAGING

MIL-R-55342 individual lot quantities are packed in chip tray carriers ("waffle packs"). Tape and reel packaging to EIA-RS481 can be specified on a standard 7 inch reel or an optional 13 inch reel for the following sizes:

- 8 mm tape — RM0505, RM0705, RM1005, RM1206, RM1010
- 12 mm tape — RM1505, RM2208, RM2010, RM2512

Individual resistors are not marked. Each package carries a non-corrosive label indicating the source code, lot number, military part number, quantity, date code, resistance value, and tolerance. Unit packages are heat sealed in water/vapor-proof conductive bags in conformance with MIL-B-81705 (type 1) and are labeled per MIL-STD-129.

MIL-R-55342 PRODUCTION TESTING

The tables at the right summarize MIL-R-55342 production testing. Each production batch is subjected to Group A screening. Subgroup 1 is performed on 100% of the product. Subgroups 2, 3, and 4 are performed on a sampling basis with no failures permitted. After the completion of Group A inspection, 13 units are selected from each inspection lot and subjected to the Group B tests, with no failures permitted in either subgroup.

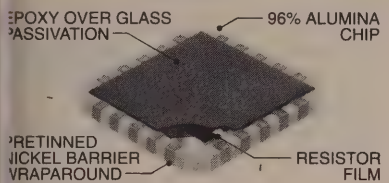
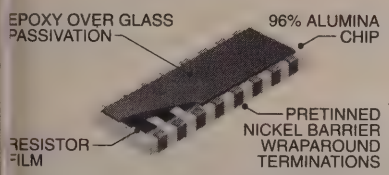
Surface Mount Resistor Networks

State of the Art's thick and thin film surface mount (SMT) resistor networks provide proven reliability in a compact package. Since the introduction of these devices to the electronics industry, State of the Art has been a leader in SMT network technology. Now, as the first manufacturer to qualify to the MIL-R-914 standard, State of the Art has also established itself as the leader in SMT network reliability.

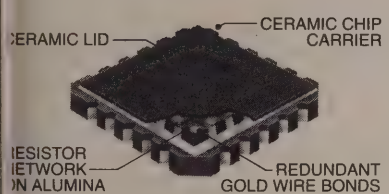
Available in thick film JEDEC and SLAMDIP styles and high precision thin film JEDEC styles, SOTA's SMT resistor networks deliver outstanding performance in high density commercial, industrial, and military applications. Their leadless design and low profile height make these devices ideal for circuits with minimal head space and limited surface area. Use the tables and charts presented on these pages to make your selection. Or, request our full line catalog for detailed technical and product information.



Thick Film JEDEC Construction



Thick Film SLAMDIP Construction



Thin Film JEDEC Construction

Thick Film Resistor Networks on 96% Alumina Substrate

- Monolithic construction
- JEDEC & SLAMDIP styles, 5Ω to 2.2MΩ
- Tolerances to 1%
- TCRs to ±100 ppm
- Power dissipation to 1.4 watt/package
- Pretinned nickel barrier terminations
- Slotted wraparound design provides flat surface for stronger solder joints
- Custom designs available
- MIL-R-914 qualified

Thin Film Resistor Networks on 99.6% Alumina Substrate

- Die & wire bond construction
- JEDEC style, 10Ω to 390kΩ
- Tolerances to 0.1%
- TCRs to ±25 ppm
- Ultra-low noise, -35 dB
- Power dissipation to 0.5 watts/package
- Gold or pretinned nickel barrier terminations
- Custom designs available

The table below summarizes the performance characteristics for our standard and MIL-R-914 resistor networks. The distinction between standard and military is made by the rigid screening and testing done to establish that all military qualified parts meet these performance characteristics.

TEST CONDITION	STANDARD		MIL-R-914			
	THICK FILM	THIN FILM	H*	V, C*	K	M
Resistance Range	5Ω-2.2MΩ	10Ω-300kΩ	10Ω-300kΩ		10Ω-2.2MΩ	10Ω-2.2MΩ
TCR (-55 to +125°C) in ppm/°C	to ±100	to ±25	≤ ±50**		≤ ±100	≤ ±300
Max. Ambient Temperature, Full Power	70°C	70°C	70°C		70°C	70°C
Max. Temperature, Zero Wattage	150°C	150°C	125°C		125°C	125°C
Thermal Shock & Power Conditioning (max. % change)	±0.5	±0.5	±0.5	±0.25	±0.7	±0.7
Low Temperature Operation (max. % change)	±0.5	±0.1	±0.1		±0.25	±0.5
Short-time Overload (max. % change)	±0.5	±0.1	±0.1		±0.25	±0.5
Resistance to Bonding Exposure (max. % change)	±0.25	±0.25	±0.25		±0.25	±0.25
Moisture Resistance (max. % change)	±0.5	±0.4	±0.4	±0.2	±0.5	±0.5
Shock, Specified Pulse (max. % change)	±0.25	±0.25	±0.25		±0.25	±0.25
Vibration, High Frequency (max. % change)	±0.25	±0.25	±0.25		±0.25	±0.25
Life, 2000 Hours (max. % change)	±0.5	±0.5	±0.5	±0.1	±0.5	±2.0
High Temperature Exposure (max. % change)	±0.5	±0.2	±0.2	±0.1	±0.5	±1.0
Steady State Humidity, 85°C-85% R.H. (max. % change)	±0.5	±0.4	±0.4	±0.2	±0.5	±0.5

**Characteristics H, V, and C are available in thin film only.*
***Characteristics H, V, and C are differentiated by the required TCR tracking ratio: H = ±50 ppm, no tracking specified; V = ±50 ppm, ±5 ppm tracking; C = ±50 ppm, ±5 ppm tracking, hermetically sealed.*

MIL-R-914, Characteristics V and C, specifies a resistance value tracking ratio for tight tolerance networks. These ratios are: ±0.1% tolerance, ±0.1% ratio; ±0.5% tolerance, ±0.1% ratio; ±1.0% tolerance, ±0.5% ratio.

HIGH RELIABILITY SCREENING

We provide optional high reliability screening and testing. Any size or style that we manufacture can be processed and/or tested to meet your specific reliability requirements. Unless otherwise specified, our standard high reliability program consists of 100% screening and special batch testing according to the Group A and Group B tests below. Alternately, testing may be specified to be in accordance with MIL-R-914, MIL-R-55342, MIL-R-83401, or any combination thereof.

GROUP A INSPECTION
SUBGROUP 1 (100%)
THERMAL SHOCK
POWER CONDITIONING
DC RESISTANCE
SUBGROUP 2 (SAMPLING)
SOLDERABILITY

GROUP B INSPECTION
SUBGROUP 1 (SAMPLING)
RESISTANCE TO BONDING EXPOSURE
TEMPERATURE COEFFICIENT OF RESISTANCE
LOW TEMPERATURE OPERATION
SHORT TIME OVERLOAD

CUSTOM DESIGNS

Surface mount resistor networks may be customized for special applications. Custom designs include modified schematic configurations, mixed resistor values in a single package, and package configurations such as modified length, width, I/O count, or pitch. The leadless, low profile construction of our thick film networks allows the mounting of passive components, such as chip capacitors, on the SMT package to form low profile RC networks.

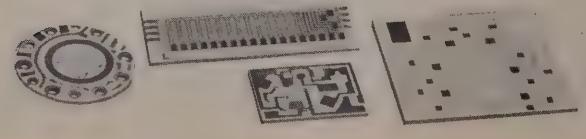
Thick Film Custom Networks

State of the Art produces a variety of custom conductor networks, resistor networks, and resistor/capacitor networks in low and high volume. We can quote and manufacture from a complete network layout or from a schematic with size, component, and output pad location requirements. Our design staff will be glad to assist you in developing your network.



NETWORK CONSTRUCTION CAPABILITIES

- SUBSTRATE: 96% Alumina std — 99% Alumina optional
- THICKNESS: .025 inch std — .012 .015 .020 .040 inch optional
- LINEAR TOOLING: Laser scribed, green scored, diamond saw cut
- HOLE TOOLING: Laser drilled, green punched
- CONDUCTORS: Silver, palladium silver, platinum silver, gold, platinum gold, etc.
- NICKEL BARRIER is available on some types of networks.
- RESISTORS: Screened on substrate or thick film chip
- PASSIVATION: Glass or silicone based
- TINNING: Solder dip or solder paste
- CAPACITORS: Screened on thick film or multilayer ceramic chip
- COMPONENT MOUNTING: Conductive epoxy or solder reflow. Other components: consult factory.

PART MARKING — MIL-R-914 networks are marked with a three-line code with four digits in each line, as shown in the example above. The code is defined as follows:

Line 1 — Digits 1-3: Date code. Digit 1 = year, digits 2 & 3 = week. Digit 4: TCR.

Line 2 — Digits 1-4: Resistance value. Three significant digits & multiplier.

Line 3 — Digit 1: Tolerance. Digit 2: Schematic configuration. Digit 3: Failure rate. Digit 4: Military JAN certification.

A dot is used to mark the pin 1 location.

MIL-R-55342 PRODUCTION TESTING

MIL-R-914 qualified thick and thin film networks must meet the established reliability criteria for fixed film resistor networks as defined in the MIL-R-914 specification. The tables below summarize MIL-R-914 production testing. Production testing in the form of Group A and Group B inspection is performed on all MIL-R-914 products prior to delivery.

D: Fused Tin/Lead Plated
G: Hot Solder Dip

MILITARY ESTABLISHED RELIABILITY SPECIFICATION MIL-R-914

Thin Film Custom Networks

State of the Art's thin film custom circuits provide the flexibility needed to meet today's high density, low TCR, close thermal tracking, and high stability requirements for microwave and other microelectronic applications. Our wide variety of packaging options, styles, and sizes, with in-process screening and quality control, provide the optimum solution to your design challenges. Our design staff will be glad to assist you in developing your network.

■ SUBSTRATE TYPES

ALUMINA CERAMIC (99.6% Al_2O_3):
10, 15, 25 mils thick standard
As-fired & polished
Surface finish < 1 microinch
Sizes to 4 x 4 inches

SILICON:
10, 18 mils thick
3 inch diameter, standard
10,000 angstroms oxide layer
Ultra fine line etching (2.5 microns)

BERYLLIUM OXIDE (99.5% BeO):
10, 15, 25 mils thick
Surface finish < 5 microinches
Sizes up to 4 x 4 inches
(standard 2 x 2 inches)

■ RESISTORS

TANTALUM NITRIDE (20-200Ω/square)
NICHROME (20-200Ω/square)
LASER TRIMMING TO 0.1% TOLERANCE
RATIO MATCHING TO 0.05%
TCRs TO ±25 PPM
TCR TRACKING TO 2 PPM

■ CONDUCTORS

GOLD
PALLADIUM
TITANIUM/TUNGSTEN
NICKEL
ALUMINUM

■ DIELECTRICS

POLYIMIDE & EPOXY OVERCOATS

ESTABLISHED RELIABILITY POWER RESISTORS MIL-R-39007 (RWR) STYLES
TYPE "RWR"/"TE"

APPLICABLE MIL-SPECIFICATION

MIL-R-39007: This is the military specification covering axial lead established reliability power wirewound resistors. TEPRO TYPE "TE" resistors meet or exceed the electrical, environmental and dimensional requirements of this specification.

SPECIFICATIONS

ELECTRICAL

Tolerance: These types are available in .1%, .5% and 1% tolerances.
Dielectric Strength: 500 VAC for 2-watt size and smaller. 1000 VAC for 3-watt size and larger.
Insulation Resistance: 1000 Megohms minimum.
Short Time Overload: 5 seconds at 5 times rated power for 3-watt size and smaller. 5 seconds at 10 times rated power for 5-watt size and larger.

MECHANICAL

Terminal Strength: 5 lb. pull for 2-watt size and smaller. 10 lb. pull for 3-watt size and larger.
Solderability: Meets requirements of MIL-STD-202.
Solvent Resistance: Meets requirements of MIL-STD-202.

MATERIAL

Core: Beryllium oxide, alumina and steatite are used, depending on the size and power requirement.
Element: Copper-nickel alloy or nickel-chromium alloy, depending on resistance value.
End Caps: Stainless steel or alloy #46.
Coating: Special high temperature silicone.
Leads: Both solderable and weldable lead materials are available and are designated by the letters "S" or "W" in the Mil. type number. "S" material is tinned copperweld. "W" designates bare nickel per MIL-STD-1276.

FEATURES

- Miniature size
- Maximum power: size ratio
- High stability
- Optimum heat dissipation
- High-temperature silicone protected
- Non-inductive windings available
- Tolerance to ±0.01%

VARIATIONS

- Special tolerance
- Special TC
- Lead length and diameter
- Weldable leads
- Molded types available

POWER RATING

Power ratings are based on a maximum 2000 hours at rated power and at an ambient of +25°C.

Established reliability - documented failure rate - 100% screening.

All MIL-R-39007 styles available.

Type TE established reliability wirewound resistors are an extention of the quality and reliability that has been the hallmark of TEPRO products for in excess of thirty years. They are manufactured and tested in accordance with MIL-R-39007 standards. Standard Group A Acceptance Testing includes 100 hour burn-in at 25° C ambient plus a visual and mechanical inspection. Qualification test data, failure rate test and traceability records are maintained at TEPRO for a period of five years. The TE series is available with or without reliability documentation and also with tolerances and temperature coefficients in excess of MIL-R-39007 requirements.

PRECISION POWER WIREWOUND ALUMINUM HOUSED, CHASSIS MOUNT RESISTORS MIL-R-18546(RE) STYLES

TYPE "TM"

FEATURES

Chassis mount for heat sink effect
Silicone protected windings
miniature size
Non-inductive windings
High stability
Optimum power: size ratio
Higher ambients
Withstand severe environments

VARIATIONS

Special TC on request
Closer tolerances to .01%
Special terminals
Dual, tapped, single-ended windings
Kelvin 4 terminal sensing types
Flexible leads

GENERAL SPECIFICATIONS

Applicable Mil spec: Mil-R-18546
Standard tolerances: 0.05 to 5%
Dielectric strength: 1000VAC TM-5, TM-10, TM-25
2000VAC TM-50
4500 VAC TM-100, TM-250
Insulating resistance: 10000 megohms minimum
Temperature Coefficients: 10 ohms and above: ±20 PPM
1 ohm to 9.9 ohms: ±50 PPM
Below 1 ohm: ±90 PPM
Terminal strength: 5-lb. pull test TM-5, TM-10
10-lb. pull test all others

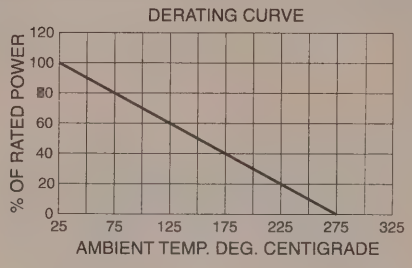
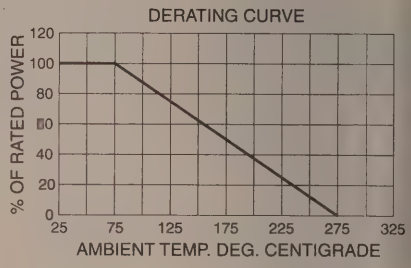
SURFACE MOUNT RESISTORS
TYPE "TKW" / "TKF"





GENERAL SPECIFICATIONS

Standard temperature coefficients:
- ±90 PPM / °C Below 1.0 Ohm
- ±50 PPM / °C 1.0 Ohm - 9.9 Ohm
- ±20 PPM / °C 10 Ohm and beyond

Electrical: Power .125 - 3 watts
Resistance: 0.01 - 1 Meg Ohms
Tolerance: 0.01 to 5%
Dielectric strength: 500 VAC
Insulation resistance:
- 1000 megohms minimum dry
- 100 megohms after moisture test

Short time overload:
- 5 seconds at 5 times rated power

Solderability: Continuous satisfactory coverage when tested in accordance with MIL-R-26E
Types:
- TKW - Wirewound
- TKF - Metal Film

MATERIALS

Core: Alumina
Element: Copper-nickel alloy or nick-chrome alloy, depending on resistance value
End caps: Stainless steel
Molding: Special high temperature silicone
Standard terminals: Tinned copperweld

FEATURES

Temperature coefficient to ±2 PPM / °C
Wirewound or Metal Film available
Non Inductive windings available

HOW TO ORDER

Sample Part No: TKW 1 .10 ±1%

TYPE "TSR"/"TSK"

TYPE "TSR" - RADIAL LEAD
TYPE "TSK" - KELVIN 4 TERMINAL

FEATURES

Miniature size
Continuous full power operation
High-temperature silicone protected
Radial lead for PC boards
4 terminal for shunts and sensing
High stability

VARIATIONS

Tolerances to .01%
Lead length and diameter
Special temperature coefficient on request
Non-inductive (Ayrton-Perry) windings
Molded types available

GENERAL SPECIFICATIONS

Applicable Mil spec: Mil-R-26 (performance only)
Standard tolerances: 0.05 to 5%
Dielectric strength: 500 VAC 1 watt size 1000 VAC all others
Insulation resistance: 1000 megohms minimum
Temperature Coefficients:
- 10 ohms and above: ±20 PPM
- 1 ohm to 9.9 ohms: ±50 PPM
- Below 1 ohm: ±90 PPM

Short time overload: 5 sec. at 5 × rated power 3 watts and less
5 sec. at 10 × rated power all others

Power rating: Based on:
- (a) full power operation at 25°C ambient
- (b) maximum hotspot 275°C
- (c) 1% maximum Δ R in 1000-hour load life

DERATING

Operation in ambients above 25°C requires derating in accordance with the accompanying curve.

HIGH PRECISION RESISTORS
MIL-R-93 (RB) STYLES

TYPE "TB"

FEATURES

Meets specifications of MIL-R-93
Standard accuracies to ± .005%
Standard TCR ± 20ppm, available to ± 1ppm
All welded construction
Epoxy encapsulated, superior moisture protection
Exceptional resistance stability

VARIATIONS

Matched tolerances and T.C. tracking
Positive temperature coefficients
Pre-conditioning, temp. cycling, burn-in
Improved rise times
Four-terminal and radial lead construction

STANDARD SPECIFICATIONS

Resistance Range - 1Ω to 15 Meg. Ω's
Tolerances - Standard from 1%, to .01%
Accuracies to .0025% are available
Temperature Coefficient - (TCR)
0 ± 10ppm/°C - 100Ω and over
0 ± 15ppm/°C - 10Ω to 100Ω
0 ± 25ppm/°C - 1Ω to 10Ω
0 ± 90ppm/°C - Less than 1Ω
Temperature Range - −55°C to +145°C

T.C. Tracking - Available to ± 1ppm/°C
Ratio Matching - Resistors are available with tolerance and temperature coefficient matching and tracking over a wide temperature range.
Environmental requirements: meet or exceed the applicable requirements of MIL-R-93.

ULTRA PRECISION METAL FILM RESISTORS
MEETS OR EXCEEDS MIL-R-10509/MIL-R-55182
MIL-R-55182 (RNC) STYLES

TYPE "RNF"/"REF"

FEATURES

- Temperature Coefficients to ±2 ppm/°C
- Tolerances to ± 0.01%
- Superior environmental performance
- Extremely low noise
- Tailored or standard values
- Matched sets and networks
- Highest stability metal film available

MATCHED SETS AND NETWORKS

Resistance matching to ±.005% and temperature coefficient tracking as low as ± 1 ppm/°C are available in matched sets.

PERFORMANCE CHARACTERISTICS

Test per Mil-R-55182 (Exceptions noted)	1 Typical ΩR*	Specification
Thermal Shock (−55 to + 150°)	0.02%	MIL-STD-202
Moisture	0.08%	MIL-STD-202
Resistance to Solder Heat	0.02%	MIL-STD-202
Short Time Overload	0.01%	MIL-R-10509
Life (1000 hrs, full power)	0.02%	MIL-R-55182
Shelf Life (max. per year)	30 PPM	

DERATING

① RNF & ② REF resistors have an operating temperature range of −55°C to +150°C and must be derated as follows:

TYPE "S," "C" & "X"

FEATURES

- High power ultra-precision resistor to 2W
- Temperature Coefficients to ± 1 ppm
- Tolerances to ±.005%
- Improved Stability ± 25 ppm/Year
- T.C. Tracking to 1 ppm avail.

The TEPRO Ultra Precision Resistor offers the user the benefits of extremely tight tolerance, very low T.C. and high stability. The resistor is a vacuum deposited, metal film resistive element, combined with a highly protective packaging system.

Precision calibration offers tolerances as tight as 0.005% while design features and manufacturing controls yield temperature coefficients as low as 1 ppm/°C absolute. Inherent in the metal film design is extremely high speed response with switching speeds less than 1 nanosecond.

The precision resistor is available in a variety of package configurations and power ratings.

PERFORMANCE DATA

Long term stability: 25 ppm/year
Temperature coefficient: 1 ppm/°C to 10 ppm/°C
Temperature coefficient track: To 0.5 ppm/°C
Tolerance: 0.005% to 1.0%
Tolerance Match: To 0.005%
Inductance: Less than 0.05μh
Capacitance: Less than 0.05pf
Rise Time (without ringing): Less than 1 ns
Voltage coefficient: Less than 2 ppm/Volt
Thermoelectric effect: Less than 0.1μ V/°C
Noise factor: Below −30db

ULTRA PRECISION THIN FILM DIP NETWORKS

TYPE "DN"

FEATURES

- Temperature Coefficients to ±1 ppm/°C
- Tolerances to ±0.01%
- Superior TCR tracking to ±.5ppm/°C
- Ratios available to .0025%
- Custom circuit schematics available

SPECIFICATIONS

- Elements: Vacuum deposited Nickel-Chrome alloy
- Terminals: Tinned copper leads, which are solderable/weldable (per Mil-Std-1276, Type "C" #22 AWG. (.025") std., .016" × .012" × .250" Gold Plated optional)
- Solderability: Meets requirements of Mil-Std-202-Method 208
- Operating Temperature Range: −55°C to + 125°C
- Power rating per element: .05 watts to .250 watts at +125°C
- Insulating Resistance: greater than 10^4 MΩ
- Dielectric Strength: 300 VRMS (Min.)
- Voltage Coefficient: 5 ppm/volt (Max.), typical less than 2 ppm/volt
- Noise factor: Below −20 db

DC AMMETER SHUNTS

TEPRO has been producing high quality DC Ammeter Shunts since 1959. Over the years we have produced and developed many "Industry Standard" shunts, along with an extensive line of custom application shunt devices.

If you have a need for a custom shunt please consult the factory and we will be happy to help engineer the proper shunt for your application.

TEPRO Shunts are designed for use with standard 50 or 100 millivolt movement switchboard indicating or recording instruments, calibrated in terms of the ampere rating of the Shunt. The millivolt drop of the Shunt is adjusted at the factory to within 1/2% accuracy.

All of our Current Shunts use the highest grade of Shunt Manganin for the resistive elements, allowing for negligible temperature coefficient and thermo-electric effect, thus avoiding errors due to heating. See chart.

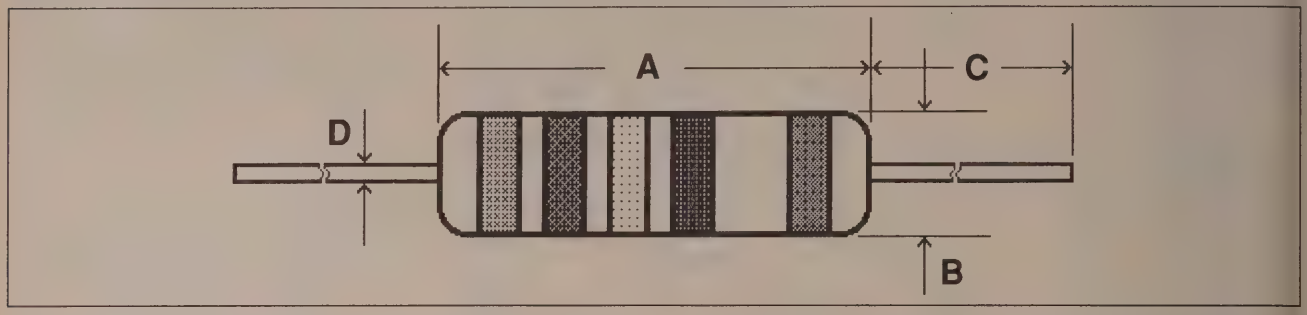
Precision Resistors from 1/10 watt to 250 watts

MICRO-MINIATURE METAL FILM RESISTORS



The VPR MML series resistor offers a general purpose metal film resistor which is suitable for any type of micro-miniature application. It is ideal for usage in hearing aids, pace makers, etc. This part offers the outstanding electrical characteristics of a truly superior metal film resistor, such as low noise, low reactance, long term stability and tight temperature coefficients, in an extremely small package. The MML features a high alumina core for superior mechanical strength and heat dissipation, welded leads and an effective coation system for solvent and environmental protection.

Codeco Type	Power (Watts)	Resistance Range	Min. Tol.	TC (PPM)	A (in.)	B (in.)	C (in.)	D (in.)

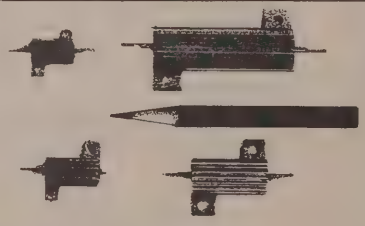
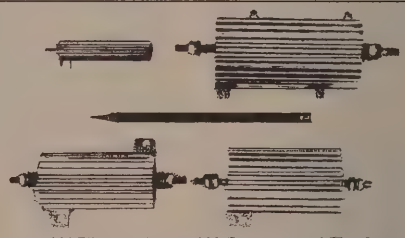
PRECISION POWER RESISTORS 5 through 250 Watts



5W Through 50W Compared To A Normal Pencil



70W Through 250W Compared To A Normal Pencil

The KAL series resistors are designed for high power dissipation with precision tolerances in a minimum of physical size. They provide extremely efficient heat dissipation by mounting solidly to a metal chassis surface for maximum heat transfer.

GENERAL SPECIFICATIONS:

• Low hot spot ratings due to exclusive complete encapsulation of the resistive element within the anodized aluminum body. • Welded construction throughout assures long stable load life. • Copper-weld leads are hot tin dipped for solderability. Heavy spade lug type leads are used on the 5 through 70 watt sizes, threaded stud terminals are used on the 100 through 250 watt sizes. • Extruded aluminum housings are used for maximum heat dissipation. • Cores are centerless ground for uniformity.

ELECTRICAL SPECIFICATIONS:

• Resistance Range — .05Ω to 275KΩ • Tolerances — from 5% to .05%. • Temperature Coefficient — 20PPM, slightly higher on low value resistors. Different TCs are available on special order. • Minimum Dielectric Strength — 1,000 VAC through 10 watts, 2,500 VAC through 70 watts, 5,500 VAC through 250 watts. • Operating Temperature Range — -55°C to +275°C • Stability — as low as .001% per annum.

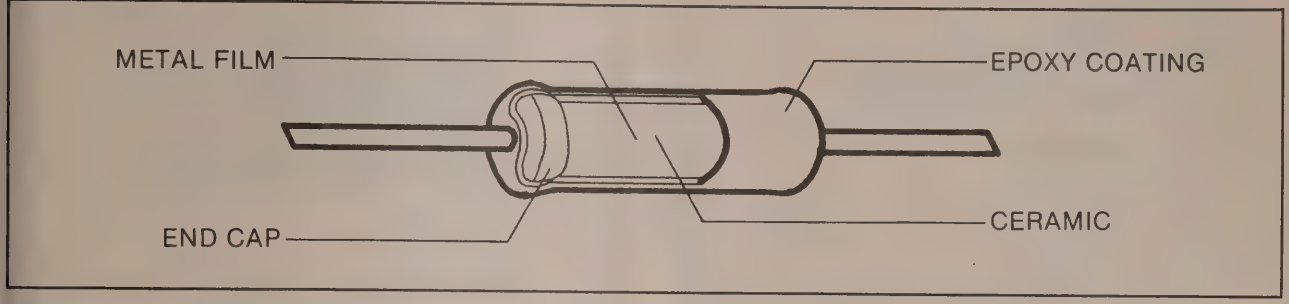
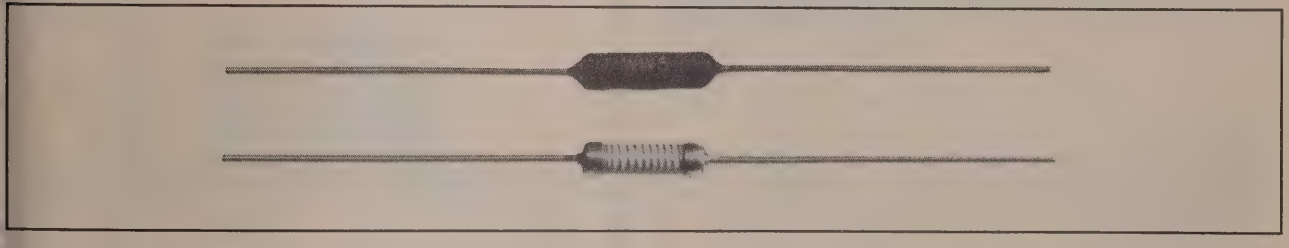
METAL FILM RESISTORS TYPE-LM EPOXY COATED



VPR type-LM Epoxy Coated Metal Film Resistors have been designed not only to meet but also surpass the specifications of MIL-R-10509 characteristics C, E, and F. The resistors feature a high evaporation of metal alloy on ceramic substrate with gold end bands. These resistors are then finished with coatings of exclusive silicon epoxy coating and paint. Special techniques and methods are used in every step of the process to ensure the lasting reliability of the type-LM Metal Film Resistors with built-in low noise and low failure rate characteristics.

VPR Type-LM Metal Film Resistors are available in 1/8, 1/4, 1/2, watt size; with 0.1%, 1/4%, 1/2% or 1% tolerance; and temperature coefficient ±2, ±5, ±10, ±25, ±50 or ±100 parts per million per degree centigrade.

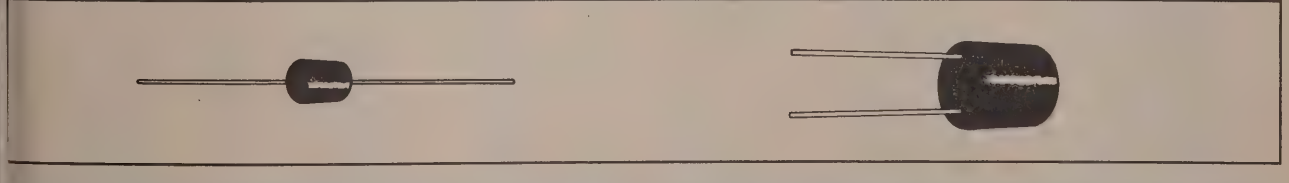
WIREWOUND RESISTORS TYPE WW SILICONE COATED



The VPR WW Series are axial lead, silicone coated precision resistors. These parts are controlled stress wound on centerless ground cores of high quality alumina. The caps are welded to the resistive element, then copper-weld leads are welded to the caps. The body of the resistor is conformally covered with an exceptionally high temperature silicone coating. Modern production equipment allows competitive pricing and superior quality.

Tolerances of the WW Series range through all the standard groupings from 5% down to .05%. Our standard temperature coefficients are ±90 PM on Values up to 1 ohm and ±20 PM on values above 1 ohm. These parts meet & exceed MIL R-26E.

ULTRA-PRECISION WIRE-WOUND RESISTORS



VPR's ultra-precision resistors should be used wherever there is a requirement for extremely tight tolerances, temperature coefficients or a combination of both. These resistors are wound on bobbins of molded epoxy with a single strand of nickel-chromium wire. This wire has no soldered or welded splices that will cause problems after the circuit is in the field. All parts are wound on reversed pi segmented bobbins to eliminate any inductance.
Tension is controlled and kept to a minimum while the winding process takes place to keep out any possible fatigue problems. The windings are then relieved of stresses by extensive aging before calibration and termination operations.
The resistors are given a silicon buffer coat before the final epoxy molding occurs, resulting in a case size that is extremely consistent from part to part. Available in axial or radial leads.

Resistance Tolerances (Most Sizes): 1%; 0.5%; 0.25%; 0.1%; 0.05%; 0.025%; 0.01%.
Temperature Coefficient: 100 ohms and up: 10 PPM/°C; 10 to 100 ohms: 20 PPM/°C; below 10 ohms: 30 PPM/°C.

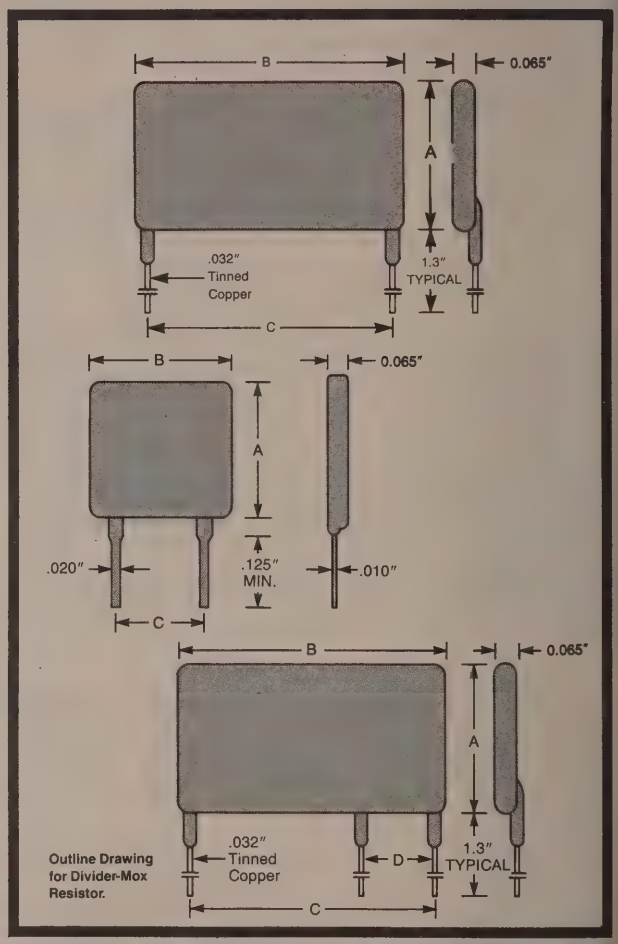
VICTOREEN SLIM-MOX Resistors

- Wide resistance range to 5,000 megohms.
- Voltage rating to 20KV.
- Low voltage coefficient.
- Noninductive resistor design
- Low capacitance.
- High dielectric and low outgassing epoxy coating.
- Optional silicone and glass frit coating available.
- Resistance tolerances range from 0.5, 1, 5, 10, and 20%.



Outline Drawing for Divider-Mox Resistor.

A COMPANY OF VISHAY

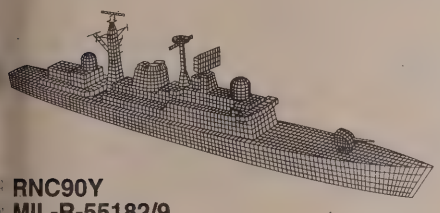
Bulk Metal® Foil Military Resistors

VISHAY RESISTORS

Established Reliability

At the cutting edge of today's advanced technology, military programs (such as the space shuttle and the sky lab, satellites, SDI, the Aegis, MK48, missiles and military aviation like the F18) often require established-reliability precision resistors beyond the level of existing military specifications. VISHAY can take the basic generic military resistor, and, with specific testing, offer improved performance specifications such as are detailed here below.

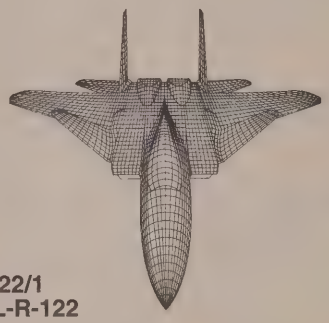
- TCR: ±2.5 ppm/°C (–55°C to +125°C)
- Load Life Stability: 0.015% (150 ppm) Δ R for 10,000 hrs.
- Shelf Life: 0.0025% (25 ppm) for 3 yrs.
- Voltage Coefficient: <0.1 ppm/V
- Current Noise: –32 dB
- Thermal EMF: 0.05 µV/°C



RNC90Y
MIL-R-55182/9

(See Catalog VMF-2000)

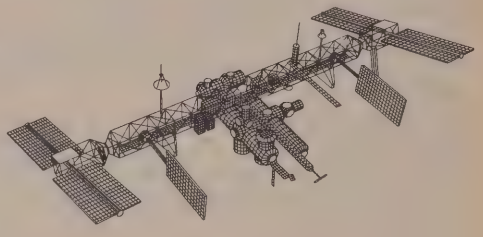
The VISHAY RNC90Y (S555) resistor is qualified to Mil-R-55182/9 for resistance values from 4.99 Ω through 121K Ω and for tolerances from ±0.005% to ±1.0%. VISHAY has accumulated over 300 million unit hours of testing on the RNC90Y resistor. The VISHAY RNC90Y high-performance resistors are designed for both the critical military systems market and for demanding industrial applications. The same resistors are also available as a non-qualified product (S555) for customers desiring extended resistance range. Both the qualified and the non-qualified version are manufactured on the same product line facilities and are subjected to the same process, lot control, conditioning, and basic QPL testing requirements. The VISHAY RNC90Y resistor is approved to MIL-STD-975D (NASA). It is also manufactured and packaged to comply with ESD requirements.



M122/1
MIL-R-122

(See Data Sheet VMF-300)

The VISHAY M122/1 (S22-1) resistor is qualified to Mil-R-122 for resistance values from 4.99 Ω through 50K Ω and for tolerances from ±0.005% to ±1.0%. VISHAY M122/1 high-performance resistors are designed for both the critical military systems market and for demanding industrial applications. The same resistors are also available as a non-qualified product (S22-1) for customers desiring extended resistance range. Both the qualified and the non-qualified version are manufactured on the same product line facilities and are subjected to the same process, lot control, conditioning, and basic QPL testing requirements. The VISHAY M122/1 resistor is manufactured and packaged to comply with ESD requirements.



VISHAY
Improved Performance Testing (IPT)

(Contact Application Engineering Dept.)

VISHAY also provides the basic MIL resistors with specific conditioning to ensure improved long term stability. This specific conditioning could include:

Thermal Shock
Specific Burn In Cycles
Short Time Overload

The guaranteed level of the Improved Performance Testing (IPT) Specifications are shown below.

Comparison of Specifications

Specification	MIL-R-55182/9 Characteristic Y Limits	MIL-R-122 Characteristic A Limits	VISHAY Improved Performance Testing (IPT) Limits

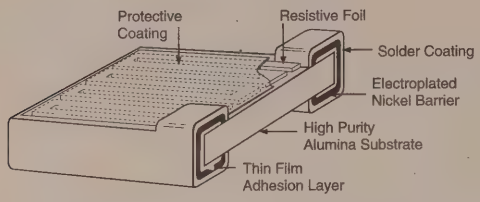
VISHAY Chips

A COMPANY OF VISHAY

VISHAY RESISTORS

Bulk Metal® Foil Ultra Precision Surface Mount Chip Resistors



VISHAY Bulk Metal® Foil surface mount resistors offer an order-of-magnitude improvement in performance over other surface mount chip resistors. Until now, the best chips available had a Temperature Coefficient (–55°C to +125°C) of 25 ppm/°C.

The maximum TCR of VISHAY surface mount chip resistors is 5 ppm/°C over the full temperature range (selected TCR tracking is available to 0.5 ppm/°C).

Where other chip resistors are supplied only as close as ±0.1% resistance tolerance, VISHAY surface mount resistors have standard resistance tolerances to 0.01%. VISHAY ultra precision surface mount chip resistors are designed to exceed the requirements of MIL-R-55342.

- Designed to Exceed Requirements of MIL-R-55342, Char. Y
- User Trimmable
- Temperature Coefficient of Resistance:
  Nominal TCR: +0.6 ppm/°C (0°C to +25°C)
  -0.6 ppm/°C (+25°C to +60°C)
  +2.2 ppm/°C (-55°C to +25°C)
  -1.8 ppm/°C (+25°C to +125°C)
  TCR Tracking: to 0.5 ppm/°C available
- Resistance Range: 5 Ω to 150K Ω
- Tolerance to 0.01% (Soldering temperature during installation may cause resistors to shift up to 0.05%)
- Load Life Stability: 0.01% Max Δ R under full rated power @ +70°C for 2,000 hrs
- Shelf Life Stability: 50 ppm/yr (0.005%) Max Δ R non-hermetically sealed
- Voltage Coefficient: <0.00001%/volt (<0.1 ppm/V)
- Current Noise: <0.025 μV(rms)/volt of applied voltage
- Non Inductive: <0.08 μH

A COMPANY OF VISHAY

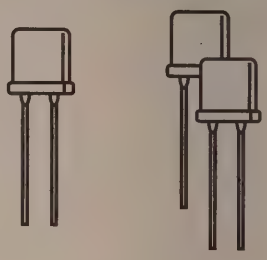
Ultra Precision Low TCR Resistors

VISHAY RESISTORS

VHP-100, the New Improved VISHAY Resistor with Self-Correcting Resistance versus Temperature Performance



VISHAY has achieved an essentially zero temperature coefficient resistor. By combining equal and opposite temperature effects, resistance changes due to temperature are kept to a minimum, to the extent that the resistance deviation of the Model VHP100 resistor remains within a 60 ppm window over the military temperature range from –55°C to +125°C.

Specifications

A COMPANY OF VISHAY

VISHAY RESISTORS

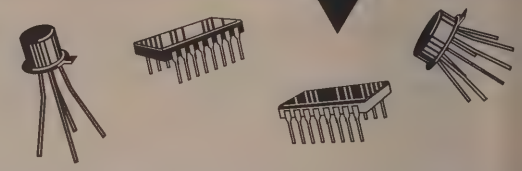
Resistor Networks Through Hole & Surface Mount

Precision, Hermetically-Sealed, Miniature TOs, DIPs and Other Packages



- Ratio tolerance to 0.0025%
- TCR tracking to 0.5 ppm/°C combined with absolute TCR of 1.0 ppm/°C— virtually not affected by temperature gradients
- Ratio stability under load-life conditions better than 10 ppm
- Rise time to 1 nanosecond, no ringing
- Noise better than –32 dB
- Hermetically sealed

The Precision Resistor Network Division of VISHAY manufactures products that add a new dimension of performance to Bulk Metal® Foil technology.

Smaller package sizes, tighter resistance matches, closer tracking and high stability are all achieved when foil chip resistors are bonded into a ceramic DIP or metal enclosure and hermetically sealed.

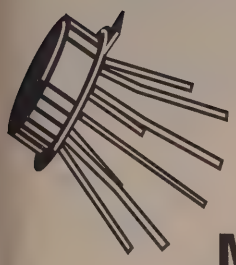
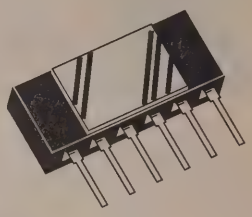
VISHAY's Precision Resistor Network products are based on fabrication from a standing inventory of packages and resistor chips. This permits quick delivery of prototypes since there are no masks to design or trial processings to be made. Further, it allows any combination of values, tolerances and circuits. There are normally no engineering or setup charges, and no minimum quantities are required. Delivery can be in as few as five days.

The sequence of fabrication includes selection of chips, die attachment, wirebonding, value trimming, and hermetic sealing. The finished product provides the stability associated with foil resistors in a hermetically sealed miniature package.

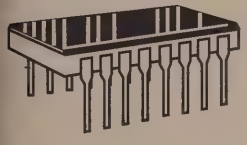
VISHAY RESISTORS • 63 Lincoln Hwy. • Malvern, PA 19355 • (215) 644-1300 • FAX (215) 296-0657 • Sales FAX (215) 640-9081



VISHAY
Bulk Metal® Resistors
of VISHAY Intertechnology, Inc.

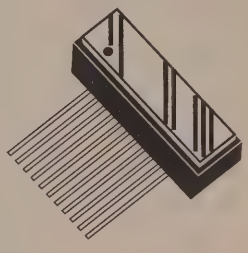


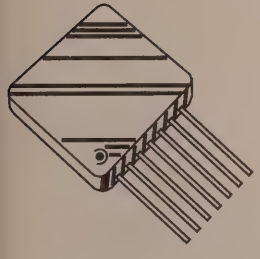
Precision, Hermetically-Sealed
Miniature Resistor Networks



Prototypes In 10 Working Days

No N.R.E., Setup or Front End Design Costs





Ratio tolerance to 0.005%

Resistance Range: 5 Ω to 30K and beyond

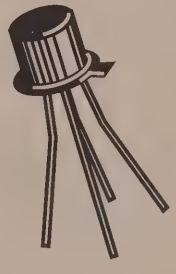
TCR: ±5 ppm/°C (–55°C to +125°C, ref +25°C)

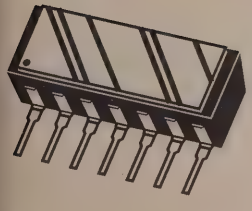
TCR tracking: to 0.5 ppm/°C

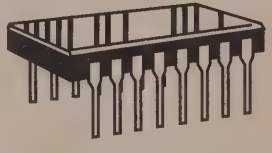
Ratio stability under load-life conditions < 0.01%

Rise time to 1 nanosecond, no ringing

Noise less than –32 dB







To place your prototype order, contact applications engineering at (215) 644-1300.
Tighter specifications* are available, see Catalog VPN-2500.

*Longer delivery for prototypes may be required.

Using an inventory of DIPs, SIPs, LCCs, TOs and flatpack packages, coupled with a comprehensive inventory of wire-bondable chips in Bulk Metal® Foil and Thin Film, we can help you design your network, manufacture and ship it within 10 working days of design finalization! Should your application call for thick film, these prototype networks will allow you to test your design easily and efficiently in its early stages.

Technologies: Bulk Metal® Foil, Thin Film

Packages: DIPs, SIPs, LCCs, TOs, Flatpacks

A COMPANY OF VISHAY RESISTIVE SYSTEMS

Surface Mount Resistor Products

VISHAY RESISTIVE SYSTEMS can supply a wide variety of surface mount resistors and resistor networks in the following technologies; Bulk Metal® Foil, thin film and thick film. Individual resistor configurations include chips, molded packages and hermetically sealed units. Resistor networks are available in leadless chip carriers, small outline chip carriers and gull-wing formed lead packages.

Utilizing state-of-the-art materials and processes, the products offer excellent life stability. If your requirements are low temperature coefficient of resistance, tight tolerance and fast rise time; or small size coupled with high power and low cost, VISHAY has the resistor or network to meet your needs.

Product selection should be based upon application performance requirements. The availability of multiple technologies, for different product styles, permits optimization of performance at the most economical level. For example chip resistors and leadless chip carrier networks are available in Bulk Metal® foil, thin film and thick film.

Product Capabilities

- Temperature Coefficient of Resistance: to ±5 ppm/°C (–55°C to +125°C)
- Life Stability: to 0.05%, 2,000 hours at + 70°C
- Shelf Life Stability: to 0.0005% (5 ppm) hermetically sealed
- Resistance Value: 5 Ω to 25M Ω
- Resistance Tolerance: to 0.005%
- Rise Time: to 1 ns

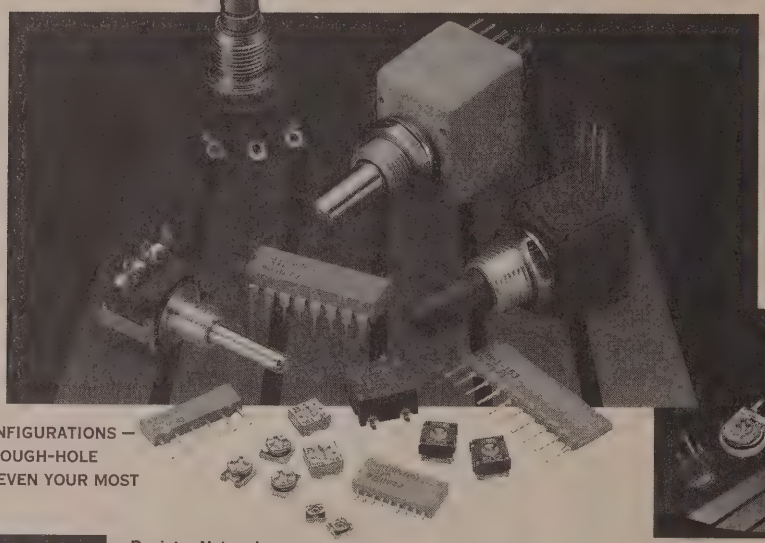
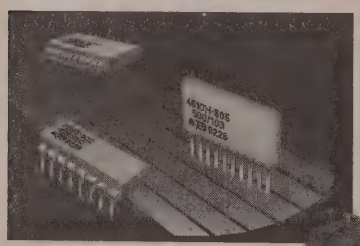
RESISTIVE TECHNOLOGY SOLUTIONS



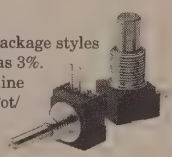
THE SELECTION OF BOURNS COMPONENTS WILL PROVIDE A SOLUTION TO VIRTUALLY ANY OF YOUR RESISTIVE REQUIREMENTS. POPULAR PACKAGES AND CONFIGURATIONS — IN SURFACE MOUNT AND THROUGH-HOLE DESIGNS — READY TO SOLVE EVEN YOUR MOST DEMANDING APPLICATION.



Resistor Networks
There's no equivalent. Select from thick and thin film products to meet your specific design parameters. Surface mount packages in gull wing styles. Through-hole devices in conformal and molded SIP, and molded DIP packages. Application specific devices for EMI/RFI filters and ECL circuits. All popular pin counts.

Trimmers
Choose from the industry's widest assortment of surface mount and through-hole models. Sealed and open frame styles. Multiturns and single-turns. A complete assortment of sizes, packaging, pin styles and adjustments. For any commercial, industrial or military application.

Precision Potentiometers
Wide variety of turns, element types and package styles available. Resistance tolerance as low as 3%. Resistance range of 20 to 200K. Slimline version available for tight designs. Pot/switch combinations offered for added design flexibility.



Panel Controls
Single- and multiturn styles with cermet, conductive plastic, Hybritron® and wire-wound elements. ±5% tolerance available. Complete assortment of terminal styles, tapers and package sizes.

Dials
Compact designs with simplified mounting. An assortment of turns and configurations.

Encoders
Rotary optical and digital contacting styles available with quadrature outputs. EN Series offers 5.0 VDC supply voltage. EC/EL Series provides 5 ohms maximum closed circuit resistance.

And More
Your supply of Bourns resistive solutions is available from your local Bourns authorized distributor now.

Switches
Now there are ultra-miniature styles available in rotary, coded and key switch versions. Pot/switch combinations in a variety of package sizes.

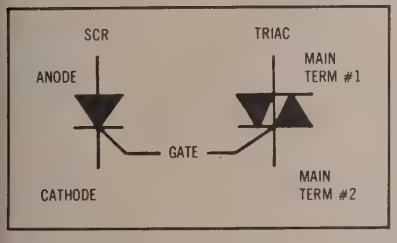
MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors*. Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/ reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

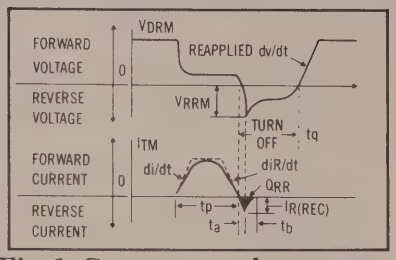


Fig. 1. Concurrent voltage and current waveforms

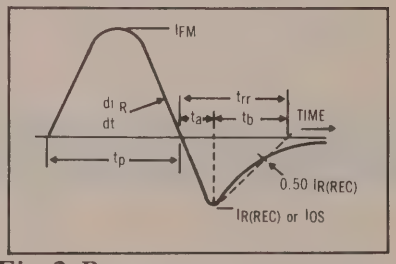

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$; *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature.*

$T_{J(MAX)}$: *Maximum allowable junction temp.*

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

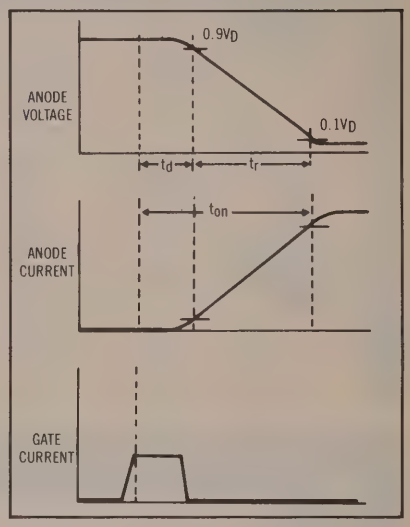

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time.* Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

t_r: *Rise time*. Time between principal voltage dropping from one value to a second lower value when thyristor turns from OFF to ON. (Fig. 3)

t_{rr}: *Reverse recovery time*. (Fig. 2)

V_{DRM}/V_{RRM}: *Maximum repetitive peak OFF state/reverse voltage* excluding non-repetitive transients.

V_{DSM}/V_{RSM}: *Maximum nonrepetitive peak OFF state/reverse voltage*.

V_{FM}/V_{TM}: *Maximum forward voltage drop* at a specific forward current and case temp.

V_{GDM}: *Gate nontrigger voltage*. Highest dc voltage that will *not* cause thyristor to switch from OFF to ON.

V_{LATCH}: *Latching voltage*. Voltage required for thyristor to latch ON at a given gate current and junction temp.

$V_{TM(DYN)}$: *Dynamic ON state voltage*. Transient ON state voltage of thyristor when triggered into conduction for a given load and time.

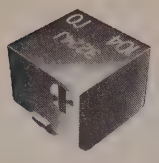
SURFACE MOUNT TRIMMERS



Model 3224
4mm Square SMD Package Multiturn Cermet Sealed

- **J-hook, and gull-wing and pinned configurations**
- **Compatible with all surface mount processes**
- **Low CRV – 1%**
- **Pick and place centering design, with flush adjustment**
- **4mm design meets EIA/EIAJ/IPC/VRCI/SMD standard trimmer footprint**

Electrical Characteristics

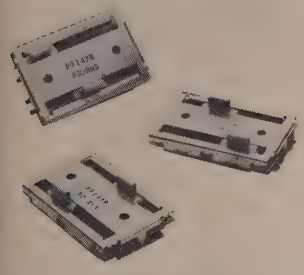
SURFACE MOUNT SLIDE POTENTIOMETER

NEW!



Model 3722
SMD Package

- I.R. reflow capable
- Surface mount technology
- Wide resistance range
- Linear taper
- ESD protection

Electrical Characteristics
Resistance Taper .....linear
Resistance...150 ohms to 1 megohm
Independent Linearity .....±5%
Absolute Minimum Resistance
....1% or 100 ohms, whichever is less
Continuity.....Continuous for full stroke
Effective Electrical Travel
.....100% of mechanical
Contact Resistance Variation (CRV)..2%
Theoretical Resolution
.....essentially infinite
Dielectric Strength
Sea Level.....500 VAC 1 minute
between lever and terminals
Insulation Resistance (500 VDC)
.....1,000 megohms minimum
between lever and terminals
Power Rating
@ 70°C.....0.05 watt
@ 125°C.....0 watt
Maximum Operating Voltage
.....Power Dissipation or 350 VAC,
whichever is less

Environmental Characteristics
Storage Temperature....150°C maximum
Temperature Coefficient Of Resistance
.....±500ppm
Slide Life (No Load)....25,000 cycles
ESD Protection....Steel Housing with
bright tin plate 0.0001-0.0003 thick
(100 milliohms maximum resistance)

Mechanical Characteristics
Operating Force ....15 to 150 grams
Stop Strength .....1.5 Kg minimum
Stroke.....19mm
Terminals.....Surface mount (shown)
Marking .....Trademark, date code,
and resistance value.

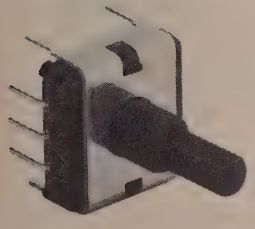
SLIMLINE POTENTIOMETERS

NEW!



PC Series
Slimline Potentiometers

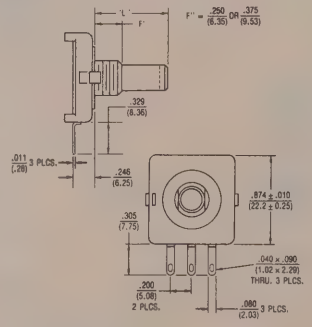
- Space saving design
- PC pin or solder lug terminals
- Linear or audio taper versions
- Wide range of resistance values
- Metric shaft and bushing options

Electrical Characteristics
Standard Resistance Range
Linear Tapers
.....500 ohms to 1.5 megohms
Audio Tapers
.....1K ohms to 500K ohms
Resistance Tolerance (All Tapers)
.....±20%
Independent Linearity
.....±5% (linear taper)
Effective Electrical Angle
.....270° ±5%
Power Rating @ 70° C
(Voltage Limited by Power
dissipation or 350 VAC,
whichever is less)
Linear..... .75 watt
Audio ..... .25 watt

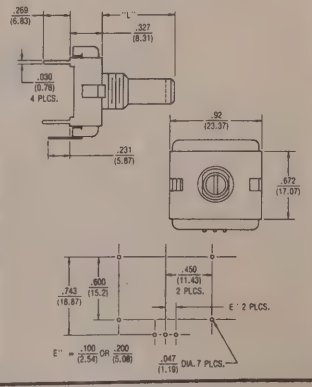
Environmental Characteristics
Rotational Life .....50,000 cycles
Total Resistance Shift
Linear.....±10 ohms or 12%,
whichever is greater
Audio .....±20% maximum

Mechanical Characteristics
Mechanical Angle.....300° ±5°
Detents.....Center, 10, 20, 30, none

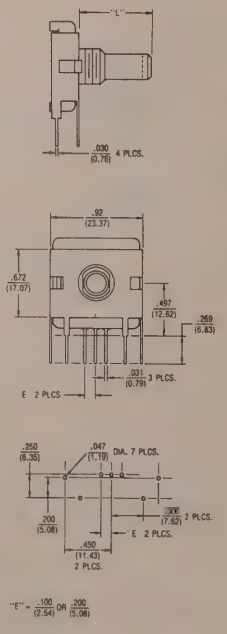
SOLDER LUGS
Dimensions not given are the same as PC pins (Rear Facing)



PC PINS
(Rear Facing)
With Rear Mounting Bracket



PC PINS (Side Exit)
With Side Mounting Bracket



Consult factory for other available options.

SI UNITS

RELATIVE QUANTITY SYMBOLS

$\neq$	not equal to
$\approx$	approximately equal to
$\propto$	proportional to
$<$	smaller than
$\leq$	smaller than or equal to
$\ll$	much smaller than
$>$	larger than
$\geq$	larger than or equal to
$\gg$	much larger than
$\equiv$	identical to or equivalent
$\uparrow$	increases
$\downarrow$	decreases

PREFIXES FOR SI UNITS

Multiple	Prefix	Symbol
10^{12}	tera	T
10^{9}	giga	G
10^{6}	mega	M
10^{3}	kilo	k
10^{-3}	milli	m
10^{-6}	micro	μ
10^{-9}	nano	n
10^{-12}	pico	p

Quantity	Symbol	SI Unit	Symbol	Derivation
acceleration	a	m s^{-2}	—	velocity/time
acceleration due to gravity	g	m s^{-2}	—	velocity/time
amount of substance	n	mole	mol	mole fraction (n) used
amplification factor	μ	*a ratio*	—	—
angle	$\theta_1, \varphi_1, \alpha_1$	—	—	—
angle of incidence	i	degree or radian	°	—
angle of refraction	r	degree or radian	°	—
angle, Bragg	θ	number	—	—
angle, critical	c	degree or radian	°	—
anode slope resistance	R_A	ohm	Ω	$\Delta V_a / \Delta I_a$
area	A	metres squared	m^2	$l \times b$
atomic number	Z	a number	—	number of protons
Avogadro constant	L, N_A	number	—	—
breadth	b	metre	m	fundamental unit
capacitance	C	farad	F	charge/p.d.
charge, electric	Q	coulomb	C	current × time
charge on electron	e	coulomb	C	$1{\cdot}6 \times 10^{-19}$ C
conductance	G	ohm^{-1}	Ω^{-1}	reciprocal of resistance
current, electric	I	ampere	A	fundamental unit
decay constant	λ	*a ratio*	—	—
density	ρ	kg m^{-3}	—	m/V
distance along path	s	metre	m	fundamental unit
efficiency	η	*a ratio*	—	work output/work input
electrochemical equiv.	z	g C^{-1}	—	mass/charge
electromotive force	E	volt	V	energy/charge
electron	e	—	—	—
energy	E	joule	J	N m
energy, kinetic	E_k	joule	J	N m. $E_k = 1/2mv^2$
energy, potential	E_p	joule	J	N m. $E_p = mgh$
Faraday constant	F	coulomb mol^{-1}	C mol^{-1}	96,500 C mol^{-1}
field strength, electric	E	V m^{-1}	—	potential gradient: p.d./dist.
field-strength magnetic	H	ampere-turns	—	current × no. of turns
flux, magnetic	Φ	weber	Wb	e.m.f/rate of change of flux
flux density	B	tesla	T	flux/area
focal length	f	metre	m	—
force	F	newton	N	kg m s^{-2}
free energy	ΔG	joule	J	—
frequency	f	hertz	Hz	oscillations/time
gas constant	r	joule	J	energy
half-life,radioactivity	$t_{1/2}$	second	s	fundamental unit
heat capacity	C	J K^{-1}	—	quantity of heat/temp. rise
heat of reaction	ΔH	joule	J	heat energy
heat capacity, specific	c	J K^{-1} kg^{-1}	—	heat capacity/mass
heat, quantity of	q	joule	J	energy

SI UNITS

Quantity	Symbol	SI Unit	Symbol	Derivation
height	h	metre	m	fundamental unit
image distance	υ	metre	m	fundamental unit
inductance, mutual	M	henry	H	induced e.m.f./rate of change of current
inductance, self	L	henry	H	—
intensity of radiation	I	*a number*	—	—
latent heat	L	joule	J	quantity of heat
latent heat, specific	l	J kg^{-1}	—	quantity of heat
latent heat, molar	L_m	joule mol^{-1}	J	quantity of heat
length	l	metre	m	fundamental unit
magnetizing force	H	ampere-turns	—	—
magnetic moment	m	Wb m	—	torque in unit magnetic field
magnification, linear	m	*a ratio*	—	—
mass	m	kilogramme	kg	fundamental unit
mass number	A	*a number*	—	number of neutrons + protons
molar volume	V_m	(dm^3)	—	volume of 1 mole
molar solution	M	*a ratio*	—	moles/dm^3
moment of force	—	N m	—	force × perp. distance
neutron number	N	*a number*	—	number of neutrons
number	n	—	—	—
number of molecules	N	—	—	—
number turns on coil	n	*a number*	—	—
number order spectrum	p	*a number*	—	—
object distance	u	metre	m	fundamental unit
peak current	I_o	ampere	A	see current
peak e.m.f.	E_o	volt	V	see e.m.f.
period	T	second	s	fundamental unit
permeability	μ	H m^{-1}	—	henry/metre
permeability, vacuum	μ_o	H m^{-1}	—	—
permeability, relative	μ_r	*a ratio*	—	$\mu = \frac{\mu}{\mu_o}$
permittivity	ε	F m^{-1}	—	farad/metre
permittivity, vacuum	ε_o	F m^{-1}	—	farad/metre
permittivity, relative	ε_r	*a ratio*	—	$\varepsilon_r = \frac{\varepsilon}{\varepsilon_o}$
potential, electric	V	volt	V	energy/charge
potential difference	V	volt	V	energy/charge
power	P	watt	W	J s^{-1}
pressure	p	pascal	Pa	N m^{-2}: force/area
radius	r	metre	m	fundamental unit
reactance	X	ohm	Ω	E_o/I_o
refractive index	n	*a ratio*	—	—
resistance	R	ohm	Ω	p.d./current
resistivity, electrical	ρ	ohm-metre	—	resistance × length
relative density	d	*a ratio*	—	ρ_{sub}/ρ_{water}
r.m.s. current	$I_{r.m.s}$	ampere	A	see current
r.m.s. voltage	$V_{r.m.s}$	volt	V	see e.m.f.
slit separation	s	metre	m	fundamental unit
tension	T	newton	N	see force
temperature, Celsius	θ	degree C	°C	from kelvin
temp. interval	θ	degree	° or K	—
temp. absolute	T	kelvin	K	fundamental unit
thickness	d	metre	m	fundamental unit
time	t	second	s	fundamental unit
torque	T	Nm	—	see moment
turns ratio	T	*a ratio*	—	n_{sec}/n_{prim}
(unit of electricity)	—	kW h	—	kilowatt × hour
velocity	u,υ	ms^{-1}	—	distance/time
velocity, angular	ω	$second^{-1}$	s^{-1}	angle/time
velocity, e.m.waves	c	m s^{-1}	—	—
velocity of sound	υ	m s^{-1}	—	—
volume	V	metre cubed	m^3	l × b × h
wavelength	λ	metre	m	fundamental unit
work	w	joule	J	force x distance (Nm)
weight	W	newton	N	kg m s^{-2} or mg

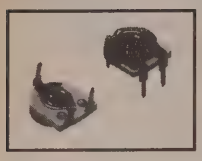
A COMPANY OF VISHAY DALE®



FEATURES

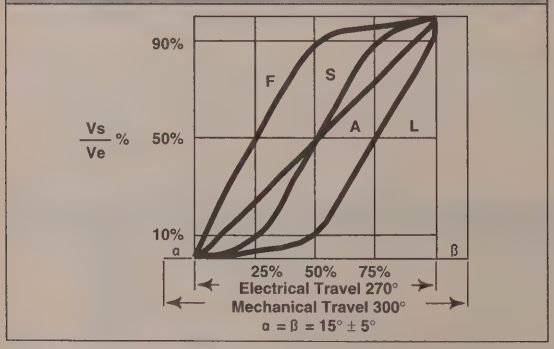
- Miniature module size - .5" [12.7] x .5" [12.7] x .2" [5.08]
- Shaft diameters - 1/4", 1/8", 3mm, 4mm, 6mm
- Up to seven modules as standard
- P.C. pins or solder lugs
- P.C. mounting brackets
- Up to twenty-one detents
- Rotary switch modules
- Concentric shafts
- Motorized designs
- Custom designs

TAPERS



MECHANICAL SPECIFICATIONS

Mechanical Travel: 300° ± 5°.

Operating Torque - Single and dual assemblies: 1/8", 3mm, 4mm D shafts = 0.7 - 1.4 ounce inch maximum. 1/4", 6mm D shafts = 1 - 1.9 ounce inch maximum. 3 to 7 modules = 0.3 - 0.45 ounce inch maximum per module.

End Stop Torque: 1/8", 3mm, 4mm D shafts = 3 pound inch minimum. 1/4", 6mm D shafts = 6.8 pound inch minimum.

Tightening Torque: 1/4", 6mm, 7mm D bushings = 13 pound inch minimum. 3/8", 10mm D bushings = 21 pound inch minimum.

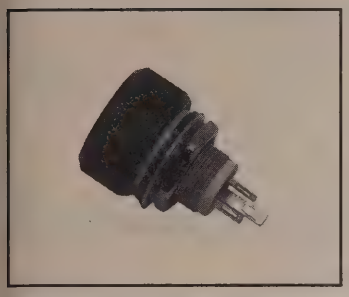
MODELS P16 and PA16 Panel Controls

Miniature, "Pot in the Knob" Cermet/Conductive Plastic

A COMPANY OF VISHAY DALE®



FEATURES

- Compact, minimum clearance, low profile design
- Fully sealed and panel sealed
- Easy to specify part type for ordering
- Metal bushing
- Available through distribution
- Simple, compact, reliable, available
- Bushing mounted panel control built inside a knob rather than behind a panel

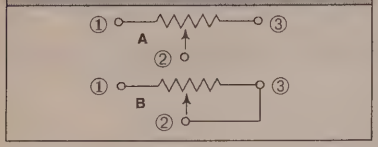
MODELS ST22 and ST23 Chip Potentiometers

Surface Mounted, Single Turn Open Frame, 4mm Square

A COMPANY OF VISHAY DALE®

EQUIVALENT CIRCUIT



FEATURES

- Designed for efficient, accurate miniaturization
- Can be wave or dip soldered without rotor problems
- Coded marking for easy identification of resistance value
- Models for standard, automatic or reverse adjustment
- 12mm tape and reel packaging

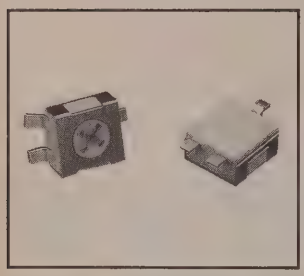
ELECTRICAL SPECIFICATIONS

Resistance Values: 100Ω to 1 MΩ.
Resistance Tolerance: ± 30%.
Rated Power: 0.2 watts at 70°C.
Rated Voltage: 100 VDC.
Rotation Life: 20 rotations.
Torque: 20 to 200 g/cm.
Rotation Angle: 270° ± 20° total.
Operating Temp. Range: - 40°C to + 100°C.
TCR: ± 250PPM/°C.
CRV: 5% maximum.

MODELS ST53YJ and ST53YL Cermet Trimmers

Surface Mount, Miniature, Single Turn, Fully Sealed

A COMPANY OF VISHAY DALE®



FEATURES

- 0.2 watts at 85°C
- Excellent stability
- Wide ohmic range
- Fully sealed
- Low temperature coefficient
- Low contact resistance variation
- Manual or automatic operations
- Small size for optimum packing density

STANDARD RESISTANCE ELEMENT DATA

STANDARD RESISTANCE VALUES (Ohms)	LINEAR LAW			T. C. - 55°C + 125°C PPM/°C

500k	0.02	100.0	0.2	
1M	0.01	100.0	0.1	

APPLICATIONS

The ST53 trimming potentiometers have been designed for surface mount applications. They offer volumetric efficiency and have dimensions of .197" x .197" x .106" [5.0 x 5.0 x 2.7] with high performance and stability. The ST53 models are suitable for both manual or automatic operation and can with-stand wave, vapor phase and reflow soldering techniques.

ELECTRICAL SPECIFICATIONS

Electrical Travel: 220° ± 15°.
Standard Series: 1-2-5.
Resistance Range: 10Ω to 1MΩ.
Resistance Tolerance: ± 10% standard.
Temperature Coefficient: (- 55°C to + 155°C). ± 100PPM/°C for Rn ≥ 100Ω.
Power Rating: 0.2 watt at + 85°C.
Limiting Element Voltage: 200 V.
Contact Resistance Variation: 1% Rn or 3Ω.
End Resistance Variation: 1Ω typical.
Dielectric Strength: 1000 V RMS.
Insulation Resistance: 10^6 MΩ.
Specification: In accordance with NFC 83251 or CECC 41100 and VRCI.

ENVIRONMENTAL SPECIFICATIONS

Climatic Category: 55/125/56.
Sealing: Fully Sealed container, solder immersion.
Soldering Cycle (Surface Mounting): 2 minutes at 215°C or 10 seconds at 260°C or 3 seconds at 350°C (according to VRCI). Soldering by wave, reflow and vapor phase.

MECHANICAL SPECIFICATIONS

Mechanical Travel: 270° ± 10°.
Operating Torque: 2.2 ounce inch maximum.
End Stop Torque: 5.0 ounce inch minimum.
Weight: 0.15 grams maximum.

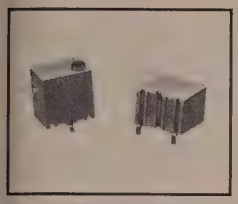
DALE ELECTRONICS, INC., 1155 W. 23rd Street, Tempe, AZ 85282-1883 • Phone (602) 967-7874 • Fax 602-829-9314

MODELS ST63Y and ST63Z Cermet Trimmers

Surface Mount, Miniature

Industrial Grade, Multiturn, Fully Sealed

A COMPANY OF VISHAY DALE®



FEATURES

- 1/4" square and fully sealed
- 0.25 watts at 85°C
- Tight tolerance
- Very low T. C.
- Low contact resistance variation
- Low end contact resistance
- Tape & Reel or Tube packaging

STANDARD RESISTANCE ELEMENT DATA

STANDARD RESISTANCE VALUES (Ohms)	LINEAR LAW			T. C. - 55°C + 125°C PPM/°C

1M	0.06	250.0	0.25	
2M	0.03	250.0	0.12	

APPLICATIONS

The ST63 has dimensions of 6.6 x 6.8 x 4.6mm and is designed for PCB surface mounting. 2 styles are available according to the positioning of the control screw and contact positions. The cermet track gives a high stability performance with an extended ohmic capacity of 10Ω to 2MΩ.

ELECTRICAL SPECIFICATIONS

Electrical Travel: 13 turns ± 2.
Standard Series: 1-2-5.
Resistance Tolerance: ± 10% standard.
Power Rating: 0.25 watt at + 85°C.
Limiting Element Voltage: 250 V.
Contact Resistance Variation: 2% Rn or 2Ω, whichever is greater.
End Resistance Variation: 1Ω typical.
Dielectric Strength: 1000 V RMS.
Insulation Resistance: 10^6 MΩ, 500 VDC.

MECHANICAL SPECIFICATIONS

Mechanical Travel: 15 turns ± 5.
Operating Torque: 2.1 ounce inch maximum.
End Stop Torque: Clutch action.
Weight: 0.5 grams maximum.

ENVIRONMENTAL SPECIFICATIONS

Climatic Category: 55/125/56.
Soldering Cycle (Surface Mounting): 2 minutes at 215°C or 10 seconds at 260°C or 3 seconds at 350°C (according to VRCI). Soldering by wave, reflow and vapor phase.

MODELS T7YA and T7YB Cermet Trimmers

Miniature, Industrial Grade

A COMPANY OF VISHAY DALE®

FEATURES

- 0.5 watts at 85°C • High stability
- Low T. C. • Wide resistance range
- Easy to read scale

STANDARD RESISTANCE ELEMENT DATA

STANDARD RESISTANCE VALUES (Ohms)	LINEAR LAW			T. C. - 55°C + 125°C PPM/°C
	MAXIMUM POWER AT 85°C (Watts)	MAXIMUM WORKING VOLTAGE (Volts)	MAX. CURRENT THROUGH WIPER (mA)

500k	0.12	250.0	0.50	
1M	0.06	250.0	0.25	

APPLICATIONS

The T7 trimmer is only .275" [7.0] in diameter and fits almost anywhere. A sealed plastic case protecting a quality cermet track guarantees high performance and reliability. Adjustments are made easier by the clear scale readings. Competitively priced, the T7 is ideally suited to all industrial applications.

ELECTRICAL SPECIFICATIONS

Electrical Travel: 270° ± 15°.
Standard Series: 1-2-5.
Resistance Tolerance: ± 10% standard.
Power Rating: 0.5 watt at + 85°C.
Limiting Element Voltage: 250 V.
Contact Resistance Variation: 3% or 3Ω, whichever is greater.
End Resistance Variation: 1Ω typical.

MECHANICAL SPECIFICATIONS

Mechanical Travel: 300° ± 15°.
Operating Torque: 3 ounce inch maximum.
End Stop Torque: 5.6 ounce inch minimum.
Weight: 0.02 ounces.

ENVIRONMENTAL SPECIFICATIONS

Climatic Category: 55/100/56.
Sealing: Enables cleaning.

100k	0.50	224.0	2.2	
200k	0.31	250.0	1.25	
500k	0.12	250.0	1.50	
1M	0.06	250.0	0.25	
2M	0.031	250.0	0.12	

APPLICATIONS

This newly designed trimming potentiometer can be mounted on PCBs as an alternative to most of the current 3/8" [9.53] square trimmers with the advantage of a significantly smaller size 9/32" [7.14].

ELECTRICAL SPECIFICATIONS

Electrical Travel: 260° ± 15°.
Standard Series: 1-2-5.
Resistance Tolerance: ± 10% standard. ± 5% available.
Power Rating: 0.5 watt at + 85°C.
Limiting Element Voltage: 250 V.
Contact Resistance Variation: 1% or 2Ω (whichever is greater).
End Resistance Variation: 1Ω typical.
Dielectric Strength: 1000 V RMS.
Insulation Resistance: 10^6 MΩ (500 VDC).

MECHANICAL SPECIFICATIONS

Mechanical Travel: 300° ± 15°.
Operating Torque: 3 ounce inch maximum.
End Stop Torque: 5.7 ounce inch maximum.
Weight: 0.02 ounces maximum.

ENVIRONMENTAL SPECIFICATIONS

Temperature Limits: - 55°C to + 125°C.
Climatic Category: 55/100/56.
Sealing: Fully sealed container.

MODEL T63
Cermet Trimmers
Small Size, 1/4 [6.35], Industrial Grade
Multiturn, Fully Sealed Container

A COMPANY OF VISHAY DALE®

FEATURES
- 0.25 watts at 85°C • Space saving
- Excellent stability & setting accuracy
- Multi-contact wiper in precious metal
- Wide range of ohmic values

STANDARD RESISTANCE ELEMENT DATA

STANDARD RESISTANCE VALUES (Ohms)	LINEAR LAW: MAXIMUM POWER AT 85°C (Watts)	LINEAR LAW: MAXIMUM WORKING VOLTAGE (Volts)	LINEAR LAW: MAX. CURRENT THROUGH WIPER (mA)	T. C. - 55°C + 125°C PPM/°C
10	0.25	1.58	158.0	0

1M	0.06	250.0	0.25	
2M	0.031	250.0	0.13	

APPLICATIONS

Due to their square shape and small size (6.6 x 6.8 x 4.7mm), the T63 trimmers are ideally suited for PCB use, enabling high density board mounting with reduced space requirement between cards. 4 styles are available differing by the top or side position of the adjustment screw and the spacing of the terminals. The use of cermet for the resistive track ensures an excellent stability of the nominal specifications throughout life.

ELECTRICAL SPECIFICATIONS

Electrical Travel: 13 turns ± 2.
Standard Series: 1-2-5.
Resistance Tolerance: ± 10% standard. ± 5% available.
Power Rating: 0.25 watt at + 85°C.
Limiting Element Voltage: 250 V.
Contact Resistance Variation: 2% Rn or 2Ω (whichever is greater).
End Resistance: 1Ω typical.
Dielectric Strength: 1000 V RMS.
Insulation Resistance: 10^6 MΩ (500 VDC).

MECHANICAL SPECIFICATIONS

Mechanical Travel: 15 turns ± 5.
Operating Torque: 2.1 ounce inch maximum.
End Stop Torque: Clutch action.
Weight: 0.02 ounces.

ENVIRONMENTAL SPECIFICATIONS

Climatic Category: 55/125/56.

1M	0.06	250.0	0.25	
2M	0.031	250.0	0.12	

APPLICATIONS
The T93 is a small size trimmer - 3/8" x 3/8" x 3/16" [9.53 x 9.53 x 4.78] for PC board mounting. 5 styles are available which differ by the position of the control screw in relation to the PC board plane and by the spacing of the terminals. Excellent operational stability is provided by the use of a cermet element. The T93 model is ideally suited for all industrial applications.

ELECTRICAL SPECIFICATIONS
Electrical Travel: 19 turns ± 2.
Standard Series: 1-2-5.
Resistance Tolerance: ± 10% standard. ± 5% available.
Power Rating: 0.5 watt at + 85°C.
Limiting Element Voltage: 250 V.
Contact Resistance Variation: 2% Rn or 2Ω (whichever is greater).
End Resistance : 1Ω typical.
Dielectric Strength: 1000 V RMS.
Insulation Resistance: 10^6 MΩ (500 VDC).

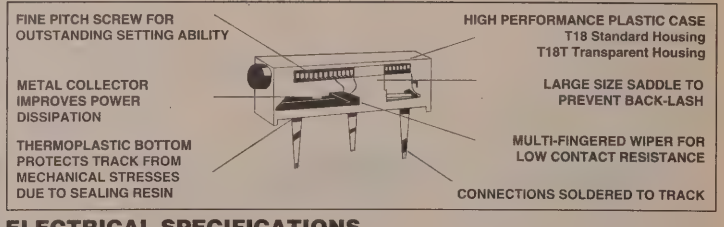
MECHANICAL SPECIFICATIONS
Mechanical Travel: 22 turns ± 5.
Operating Torque: 2.1 ounce inch maximum.
End Stop Torque: Clutch action.
Weight: 0.04 ounces.

ENVIRONMENTAL SPECIFICATIONS
Climatic Category: 55/125/56.

MODELS T18 and T18T
Cermet Trimmers
3/4 [19.05] Rectangular, Industrial Grade, Multiturn

A COMPANY OF VISHAY DALE®

FEATURES
- 3/4" [19.05] rectangular
- T18 normal housing
- T18T transparent housing



FINE PITCH SCREW FOR OUTSTANDING SETTING ABILITY
METAL COLLECTOR IMPROVES POWER DISSIPATION
THERMOPLASTIC BOTTOM PROTECTS TRACK FROM MECHANICAL STRESSES DUE TO SEALING RESIN
HIGH PERFORMANCE PLASTIC CASE T18 Standard Housing T18T Transparent Housing
LARGE SIZE SADDLE TO PREVENT BACK-LASH
MULTI-FINGERED WIPER FOR LOW CONTACT RESISTANCE
CONNECTIONS SOLDERED TO TRACK

Electrical Specifications

Resistance:
2.4K-9.6KΩ standard (See table)
Special resistances: contact factory

R_T Tolerance:
±20% standard
±10% and less: special

Accuracy (independent linearity):
±0.07% to 0.05% standard (See table)(special linearities: contact factory)

Power Rating:
0.75 watts/inch stroke

Temperature Range:
-55° to +125°C

Resolution:
Infinite (conductive plastic)

Stroke (electrical travel):
6" (150mm) to 36" (900mm) (See table)

Mechanical Specifications

Mechanical Travel:
Electrical travel +0.1" (2.5) min. (See table)

Shaft:
0.250" (6.35) diameter; 1/4-28 threaded end adaptor (furnished)

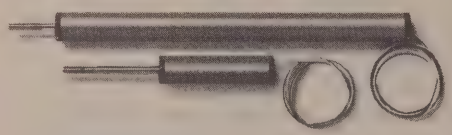
Case Size:
1.25" square x length (See table)

Actuation Force:
1 lb. (4.4 Newtons) maximum — standard

Repeatability:
Within 0.0005" (.013)

Life:
100 x 10^6 traverses (up to 12" stroke — derated proportionately for longer units)

600 Series
1" (25mm) to 12" (305mm)



Model	601	602	603	604	606	610	612
Total Electrical Travel in. (mm)	1.00 (25)	2.00 (51)	3.00 (76)	4.00 (102)	6.00 (152)	10.00 (254)	12.00 (305)
Active Electrical Travel in. (mm)	.90 (23)	1.90 (48)	2.90 (74)	3.90 (99)	5.90 (150)	9.90 (251)	11.90 (302)
Resistance KΩ ±20%	1.00	2.00	3.00	4.00	6.00	10.00	12.00
Linearity Over Active Electrical Travel ±%	0.70	0.35	0.25	0.15	0.12	0.09	0.08
Mechanical Travel in. (mm)	1.10 (28)	2.10 (53)	3.10 (79)	4.10 (104)	6.10 (155)	10.10 (257)	12.10 (307)
Case Dimensions "A" in. (mm)	2.50 (57)	3.50 (89)	4.50 (114)	5.50 (140)	7.50 (190)	11.50 (292)	13.50 (343)

Electrical Specifications

Electrical Travel:
1.00" (25mm) to 12.00" (305mm) (See table)

Resistance Range:
1.0K to 12.0KΩ standard (See table)

Resistance Tolerance:
±20%

Independent Linearity:
±0.70 to 0.08% (See table)

Power Rating at 70°C:
0.25 watts
Per inch of electrical travel derated to 0 watts at 125°C

Output Smoothness:
0.1%

Resolution:
Infinite

Insulation Resistance at 500 VDC:
1000 megohms

Dielectric Strength:
500 VDC

Temperature Range:
-55 to +125°C

Mechanical Specifications

Mechanical Travel:
Electrical travel +0.1 in. (2.5) min.

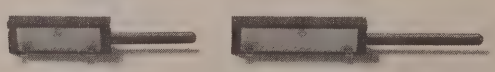
Actuation Force:
2 oz. (.56 Newtons) max.

Repeatability:
Within .0005 in. (.013)

Life:
10 x 10^6 Cycles

Shaft Alignment:
Floating shaft design allows for shaft/interface misalignment up to 0.010" (.25). Shaft rotates freely

9600 Series 0.50" (12.7mm) to 1.50" (38.1mm)
Miniature/Spring Return



Specifications (Typical)*

Model	9605	9610	9615
Total Electrical Travel (A) inches (mm)	0.50 (12.7)	1.00 (25.4)	1.50 (38.1)
Active Electrical Travel	0.40 (10.0)	0.90 (22.8)	1.40 (35.6)
Total DC Resistance ±25%	1.7K	3.4K	5.1K
Linearity Over Active Electrical Travel	±2%	±2%	±2%
Best Practical Linearity	±1.0%	±0.5%	±0.35%
Power Rating At 70°C, Watts	.25	.50	.75
Mechanical Travel ±.015 (±0.4) (B) inches (mm)	0.56 (14.2)	1.06 (26.9)	1.56 (39.6)
Housing Length ±.015 (±0.4) (C) inches (mm)	1.06 (26.9)	1.56 (39.6)	2.06 (52.3)
Terminal Spacing: (D) inches (mm)	0.30 (7.6)	0.50 (12.7)	0.80 (20.3)
(E) inches (mm)	0.20 (5.1)	0.50 (12.7)	0.70 (17.8)
Fully Extended Length ±.015 (0.4) (F) inches (mm)	.810 (20.6)	1.310 (33.3)	1.810 (46.0)
Mechanical Life	2,000,000 Full Cycles, 5,000,000 Dither Cycles		
Stop Strength oz. (Newtons)	360 (100)		
Actuation Force oz. (Newtons)	14.4 (4.0) Maximum, supplied with internal spring to return actuator to extended position.		
Humidity	95% @ 38°C		
Vibration	15Gs, 50 to 1,000Hz, 2hrs, each plane		
Shock	Up to 50Gs		
Temperature Limits	-40°C to +135°C		

*Most specifications may be altered to meet specific requirements.

Industrial Control Sensors
9800 Series

Models 9805-9808
Offset Connector Style

Models 9811-9814
90° Connector Style.

Models 9831-9832
Leadwire Style

Duncan 9800 Series sensors are designed for rugged, continuous under hood or other engine applications. Features include stable materials that withstand high temperatures and an insert molded integral connector/ body design that eliminates weak/stress points and leaks during engine wash-down or water exposure. These sensors typically offer long life at 2,000,000 full cycles (5 million dither cycles) and excellent resistance, voltage and linearity characteristics.

VISHAY SFERNICE

LINEAR TRANSDUCERS

Advanced design criteria combined with precise process control manufacturing provide highly reliable transducers for control and measurement of linear position. Seven basic models allow selection of over 1000 standard and option features to best suit your length, accuracy, life, environment and price goals.

- ***Electrical Stroke 1" to 240"***
- ***Accuracy up to +/-0.025%***
- ***Infinite Resolution***
- ***Life 100 Million Cycles (typ.)***
- ***Sealed Construction***
- ***Choice of Mounting***

Special Designs Available on Request

DYNAMATION TRANSDUCERS
CORPORATION

ROTARY POSITION SENSORS

Thirty two precision designed standard models offer the accuracy, size, mounting features, reliability, life and cost effectiveness to fit your demanding applications.

Over two hundred standard design options allow optimized selection in this extensive product offering.

- ***Case Size 1/2" to 3"***
- ***Servo or Bushing Mount***
- ***Accuracy up to +/-0.01%***
- ***Linear Functions***
- ***Nonlinear Functions***

VISHAY SFERNICE

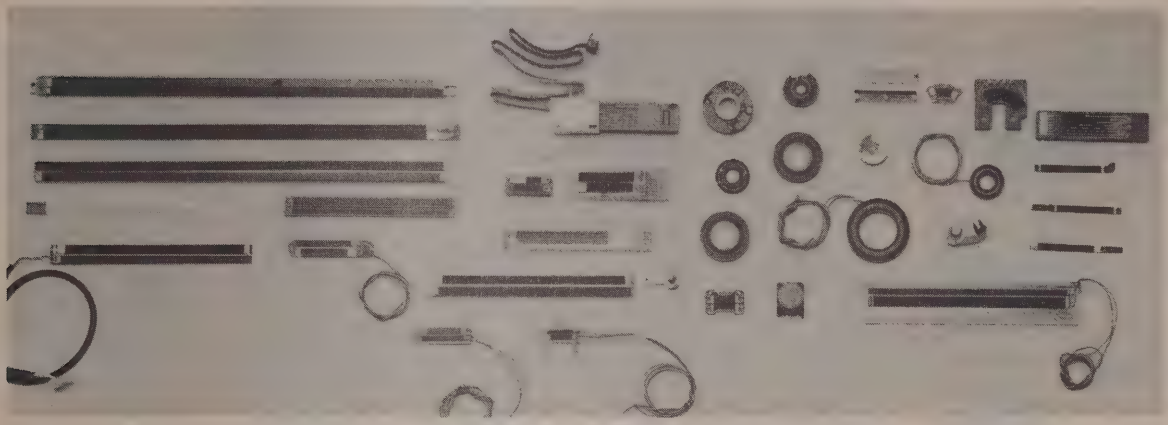
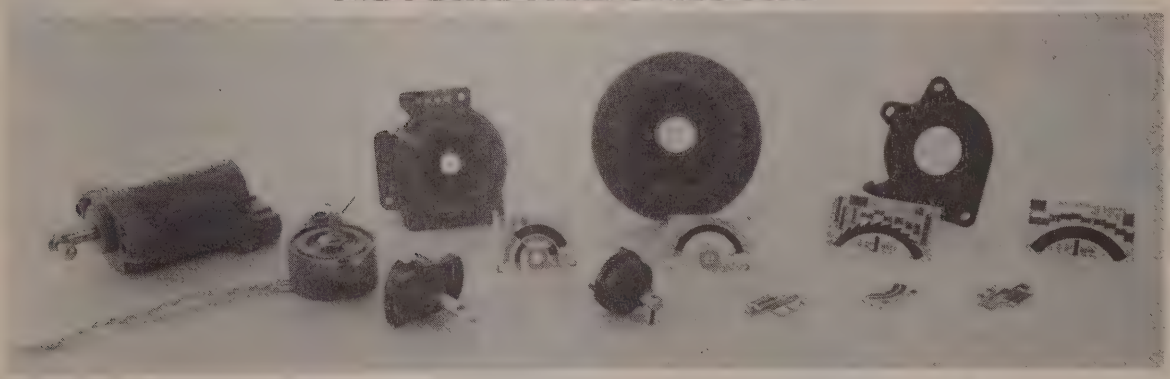
ELEMENTARY POSITION SENSING



When your application calls for the use of reliable, infinite resolution position sensing, select one from our standard line of linears or we'll custom design one specifically for you.

Virtually any size, shape or function can be economically produced in any volume with our application specific instrumentation.

AUTOMOTIVE SENSORS



Precise, unique designs utilizing our extensive experience in high-volume production. Linear and nonlinear functions. From basic element and wiper assemblies to sealed, enclosed designs.

- ***Throttle Position***
- ***Fuel Injection***
- ***Electronic Transmission***
- ***Light Intensity***
- ***Wiper Control***
- ***Wheel Alignment***
- ***Multiaxis Gearshift***
- ***Speed Sensor***

LCPL	7.87-39.37"	2K-500K	Cond.Plas.	±5%	2-6 W	.75"x.5"	Open frame, 10 Mil strokes life
LW50	11.8-39.3"	200-200K	Wirewnd.	±.25-.3%	5-10 W	2"x2"	Heavy duty, up to 40" stroke lengths

Joystick Controllers

Series 50JA pictured. Many other features and models available. Contact ETI for more details.

- 2 & 3 dimensional coordinate types
- Operating temp. range: -20°C ~ +65°C
- Vibration: 10 – 55Hz 10G
- Shock: 30G
- Life expectancy: approx. 5,000,000 operations
- Output smoothness: below 0.2%
- Resolution: essentially infinite
- Dielectric strength: 1 min @ 1,000VAC

Model	# of Turns	Input VDC	RPM's	Potent. Element	Other Features
MC20-1	10	6,12	3,5,10,18,35,61	Wirewound	Hi-Rel pot, barrel housing
MC20-2	10	6,12	3,5,10,18,35,61	Wirewound	Dual gang for feedback
MC20-3	10	6,12	3,5,10,18,35,61	Wirewound	Assem. w/turns count. dial
MC4P	1	6,12	3,5,10,18,35,61	Cond. Plastic	Highest Quality, 50 mil. life
M2W	10	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	General Purp. Economical
M20	10	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	High resolution pot
M20D	10	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	M20 with dual gang for feedback
M2WD	10	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	M2W with dual gang for feedback
M2E	1	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	Single turn, up to 5 gangs
M2P	1	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Cond. Plastic	Single turn up to 5 gangs, long life
M2PS	1	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Cond. Plastic	Same as M2P w/ 5 amp snap action limit switches
M4P	1	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Cond. Plastic	Single turn, 50 million turn life pot, high quality
M4WFS	10	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	High rel. pot w/ 5 amp limit switches, dial & cable
M4W	10	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	High resolution pot
M4WS	10	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	High rel. pot w/ 5 amp limit switches and cable
M4WF	10	12 24	3,5,10,20,25,35,50,65 7,10,15,20,30,45,60	Wirewound	High resolution pot with dial

Features of ETI Motorpots

- Manually adjustable
- Reversible motors
- Slip clutch
- Dynamic braking avail.
- Analog positioning
- Small, compact size
- Driver circuitry avail.

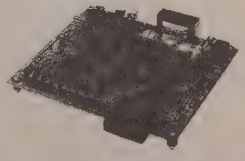
Options

- 1-30 turn pots
- Hybrid elements
- Limit switches
- Multi-ganged pots
- Non-std. RPM's
- Non-std. Res. Values
- AC input available, call factory

Not all options available on all models

Motorpot Driver Circuitry

Analog Proportional output
3 Input Modes to choose from!



Input Signal ..... 0-5 or 0-10 VDC (Model 6501)
4 to 20 mA (Model 6502)
16 bit data (Model 6503)
Power Supply ..... 110/120 VAC
Accuracy ..... Avg 0.1% to 0.2%
Resistance range (ohms) . 100-100KΩ
Output speeds available .. 3, 5, 10, 18, 35
Motorpot Power Rating .. 3 Watts

Series 6500 is a self-contained high performance motorpot driver system with typically better than 0.5% accuracy. Available with voltage, current or 16 bit digital input modes.

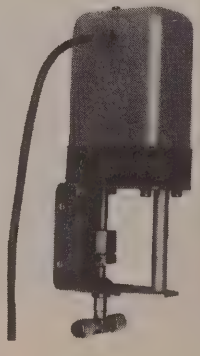
The dual gang pot provides isolated variable output and a feedback pot to null the servo system at the desired position. If specified, the driver allows feedback from your process to null the servo system. The feedback provides an analog position when your circuit is running and enables the system to resume at the correct position in the event of a power outage by use of an inhibit circuit.

Other Motorized Components:

- Motorized Rheostats - 25, 50 and 100 Watts
- Motorized Variable Transformers - 10C, 2¼ amps
- Non-Standard Motorpots and Driver Circuitry

New Advanced Design!

Valve Actuator Electric



New Design Standards:
- Dynamic Braking (prevents coasting)
- Limit Switches
- Pressure shut-off device (protects valve seat)

Options:
- Feedback potentiometer
- Cable connectors
- Non-standard R.P.M's
- Actuator without valve
- 6 VDC motor
- Special cable
- Other o'ring materials
- See us for heavier VA150 or VA400 models

Output torque..... 25 oz. in. (Others available)
RPM ..... Factory Quote
Motor Voltage ..... 12 to 24 VDC
Valve Type ..... Specified or provided by user

Control Circuitry Available. See Series 6500

Many other features and models available. Most items in stock, ready for immediate shipment!
Engineering Assistance Available - Non-standards are no problem!

ETI Systems, Inc. 2251 Las Palmas Drive, Carlsbad, CA 92009 Phone: (619) 929-0749 Fax: (619) 929-0748

MINIGLOSSARY ENCAPSULATION

MATERIALS/HANDLING

Catalyst: A substance which changes the *rate* of chemical reaction. Very small quantities can cause fast change.

Conformal coating Sprayed or dipped. A thin conformal jacket which protects an assembly from moisture or other degrading environments.

Curing agent: See catalyst.

Hardener: See catalyst.

Hermetic: A permanent gas-tight seal.

RTV: Room Temperature Vulcanizing. Associated with silicone rubber sealants which vulcanize at room temperature.

Thermoplastic: Plastic materials which can be made to flow *repeatedly* with the application of heat.

Thermosetting: Plastics which once cured cannot be made to flow again.

Thixotropy: The property of a coating compound which has low viscosity when agitated, but which thickens when the agitation ceases.

Viscosity: Measured in units of *poise* or *centipoise*. The property of a liquid which resists internal flow. Low viscosity equates with thin and vice-versa.

PROCESSING

Casting: Parts or assemblies are placed in a mold. Encapsulating material is added and cured. Part is then removed from the mold.

Dip coating: Part or assembly is dipped into the encapsulating material. Final thickness is determined by number of dips, viscosity, rate of withdrawal, and temperature.

Embedding: Wherein an encapsulant substantially fills all voids in and about an assembly.

Impregnation: A process of encapsulation involving evacuating all air and then allowing the encapsulating material to flow in and fill all voids.

Molding: Similar to casting except this process usually implies multicavity molds and costly machines.

Potting: Wherein the part or assembly is immersed in an encapsulating material contained in a shell which becomes a permanent outer surface after curing.

DIELECTRIC

Arc resistance: An encapsulant's resistance to the formation of a conductive path or track. Measured in time.

Breakdown voltage: The voltage at which an encapsulant fails electrically.

Capacitance: The property of conductors and dielectrics which allows the storage of an electrical charge when the voltage is applied.

Corona: A luminous discharge of electricity due to air ionization when a certain voltage is reached. Can be internal or external. The formation of ozone can cause rapid deterioration of certain materials.

Dielectric: Insulator (Nonconductor.)

Dielectric constant: The property of a material that determines its ability to store electrostatic energy.

Dielectric strength: The ratio of dielectric breakdown to the thickness of insulating material.

Dissipation factor: The ratio of a dielectric material's energy losses.

Flashover: Point at which an electric discharge occurs around an edge or across a surface. Can result in a carbon track and permanent degradation.

Insulation resistance: (IR) An insulating material's total DC leakage.

Surface resistivity: The resistance of the surface of an insulating material to the flow of direct current.

Voltage endurance: Sometimes called corona resistance. The ability of a material to withstand the application of sustained high voltage.

Volume resistivity: The resistance of a material to direct current flow as a measure of volume. Expressed as ohm-centimeters.

- Reduced weight
- Best value

The JDK Co-Molded Conductive Plastic Process

JDK manufactures one type of potentiometer element—co-molded conductive plastic—because, to the designer and builder of systems in critical applications, there is no justification to use less than the best. In the JDK process, the termination and resistance materials are simultaneously molded with the plastic substrate. The result is a flush circuit with a very hard, smooth surface which, when combined with JDK's multifinger precious metal contacts, promotes ultra long life, as well as excellent electrical performance in all environments. The superiority of the JDK flush circuit over the raised circuit elements (i.e., conductive plastic film, screened conductive plastic, cermet, hybrid, and wirewound) is most evident in its long-term consistent performance and reliability.

JDK Precision Co-Molded Conductive Plastic Potentiometer Elements And Rotor/Wiper Assemblies

With customer/supplier relationships growing closer and as concurrent engineering becomes a way of life, it is becoming more and more feasible to reduce system packaging costs by designing in JDK Co-molded Conductive Plastic Potentiometer Element and Mating Wiper assemblies and Shaft Insulators. If you are designing for a new application, please consider the reduced size, space, weight and costs associated with JDK Elements/Wipers/Shaft insulators. Listed below are our five standard sizes. However, we offer many custom options ranging from different mechanical shapes to electrical options such as special angles, resistance values, linearities, etc. Please don't hesitate to call or Fax with questions.

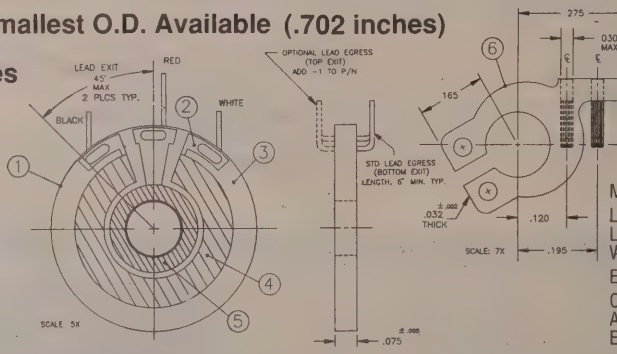
Model 6909 Series—Smallest O.D. Available (.702 inches)

Features—6909/6911 Series

- Mates with .125 Dia. Shaft
- Working Height .187
- Top or bottom wire exit
- Reduces packaging cost
- Reduces system weight
- Special electrical angles, resistance values, linearities available
- No solder on element
- Low fractional torque



SPECIFICATIONS

ELECTRICAL

Resistance Range: See Tabulation Table Below
Standard Electrical Angle: 320°
Standard Independent Linearity: ±0.5%
Output Smoothness: 0.1% Max
Resistance Temp. Coefficient: ±400 PPM/°C Max
Power Rating At 70°C (watts): 1.0

PRECISION CO-MOLDED CONDUCTIVE PLASTIC POTENTIOMETERS & ASSEMBLIES

THE JDK DIFFERENCE

Since the JDK process and systems are foremost in the industry, we are able to offer the following features:

- ULTRA-LONG ROTATIONAL LIFE — 50 million cycles minimum for most applications of 6000 & 6200 models
- STATE-OF-THE-ART OUTPUT SMOOTHNESS — always under 0.05% (standard angles)
- NO INTERNAL SOLDER CONNECTIONS — conductive epoxy and welded connections used for greater reliability
- LOW TORQUE — less than 0.1 in oz. available in most single cup 6000 & 6200 models
- 18 MONTH WARRANTY — standard for most applications of 6000 & 6200 models
- OUTSTANDING VALUE — best "price/performance" ratio in the industry
- ALL UNITS DESIGNED, MANUFACTURED, AND TESTED IN ACCORDANCE WITH MIL-R-39023

STANDARD PACKAGED POTENTIOMETERS

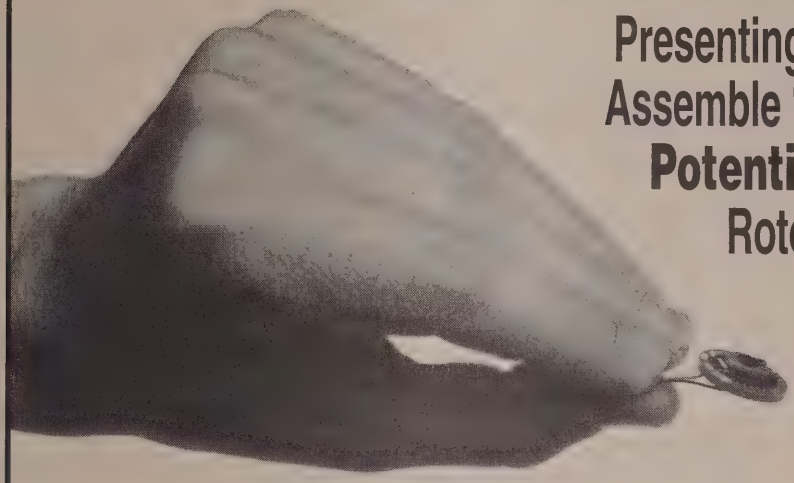
Tiny-Tough-Reliable-Low Cost



Presenting: The JDK Easy To Assemble "DO IT YOURSELF" **Potentiometer** Element Rotor/Wiper Kits

Actual Size
.187" Thick

JDK Controls new "DO IT YOURSELF" Potentiometer Element and Rotor Wiper Assemblies provide 100,000,000 revolutions minimum of the smoothest, infinite resolution precision position sensing money can buy. No shaft housings or bearings are needed so they take up only about half the space of standard size units. By reducing this redundant packaging, you reduce your costs significantly. Just slip it over the shaft of your motor, lever, actuator etc.

JDK ELEMENT AND ROTOR/WIPER ASSEMBLIES are the best way for you to increase system reliability while reducing system space, weight and packaging costs, all at the same time.

HOW'S THIS FOR RELIABILITY?

Typical- Run one of our assemblies continuously at 4 RPM, 24 hours per day, 365 days per year and it will last for **50 years minimum.**

STANDARD OR *CUSTOM*-WHAT DO YOU NEED?

JDK offers its "DO IT YOURSELF" assemblies in kit form. Some standard sizes are shown on pages 2088 and 2089 of this EEM volume. In addition, we can customize kits with virtually any diameter, resistance, linearity, thickness or electrical angle you need.

WHAT ABOUT LESS OPERATING SPACE?

JDK "DO IT YOURSELF" element and rotor/wiper assemblies take up only .187" of working height, about as much as an antacid tablet (throw your antacids away).

EASY TO ASSEMBLE

JDK "DO IT YOURSELF" kits are individually packaged including element, shaft insulator, rotor assembly and assembly instructions. They take only a few minutes to assemble. A spreader tool for attaching the rotor assembly can be found in most hardware stores. However, JDK Offers one as an option. Please specify with your order.

HOW ABOUT LOWER COSTS?

With no housings, bearings or other packaging hardware required, you save at least half over the cost of standard units.

MINIGLOSSARY POWER SUPPLIES

Ambient reference: Refers to the temperature of the still air surrounding the power supply

Case reference: One of the specs that make up the nominal rating. The temperature of the case with the temperature of the surrounding still air at a stated temperature (usually 25°C).

Crowbar circuit: Protects the load. A protective circuit that applies a short circuit across the output immediately upon overload. (See overvoltage).

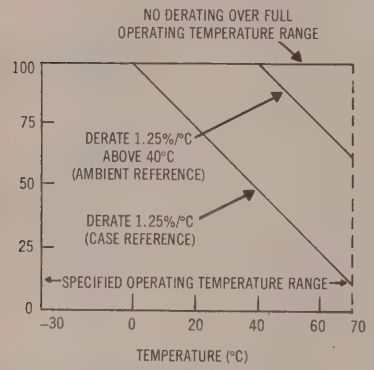

Fig. 1. Power output derating can be referred to ambient or case.

Derating: The degree output is reduced as temperature increases. Usually referenced to ambient case temperature and shown on a graph.

Efficiency: Ratio of the output power to the required input power. Usually expressed as a percentage given nominal environmental temperature.

EMI/RFI: Interference electronic circuitry caused by energy from electromechanical or radio frequency power supplies.

Foldback: Built-in protective circuits that automatically reduce the output voltage and/or current to very low levels in the event of an overload.

Holdover (Holdup): The interval that rated output will continue after input ceases. Usually milliseconds.

Input reflected current: The peak-to-peak alternating current generated by switching transients in DC/DC converters. Should not exceed 1%.

Inrush current limiting: Built-in circuits that monitor high currents through the rectifiers to the capacitors at turn ON. Circuit is usually inhibited as capacitors attain full charge.

Nominal rating: The spec value of the supply at stated conditions of input, output, and temperature.

Overshoot: A transient voltage change occurring during turn ON or OFF or during an abrupt load change.

Overvoltage (Overload) protection: Built-in circuits that protect the load or the supply by shutting it down or providing foldback.

Recovery: The time interval between the termination of an overload and restoration to normal operations.

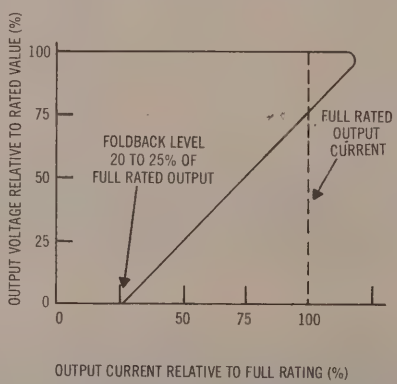

Fig. 2. Current foldback limiting self-resets with removal of fault.

Response: The time interval between a stated step change in input voltage or load current and return of output to normal operating conditions.

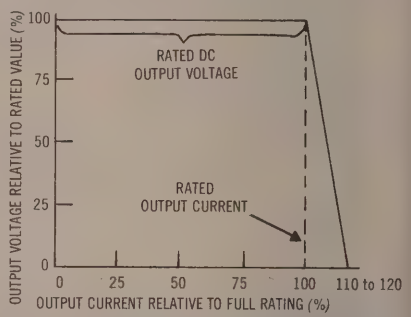

Fig. 3. Current limiting restrictions output current to a valve somewhat greater than full rated output; it resets when fault is removed.

Sensing: Regulation techniques that monitor output voltage and/or current. *Local sensing* refers to the output terminals. *Remote sensing* allows a feedback from the load circuit to the power supply.

Soft start: Allows the supply to start from zero current and/or voltage over a stated period of time during start up to prevent voltage overshoots and current imbalances.

Switchers: Power supplies using switching techniques to achieve high efficiency regulation. These techniques can have attendant EMI/RFI problems.

Tracking: The maintaining of fixed ratios between multiple outlets despite variations in line, load or temperature. Particularly important in supplies with symetrical (+)(−) outputs.

Transient protection: Circuitry designed to protect the supply from high amplitude line transients. Generally expressed in terms of peak voltage and maximum transient time duration.

MAUREY
INSTRUMENT CORP.

PRECISION CONDUCTIVE-PLASTIC SINGLE TURN POTENTIOMETERS

PST

These conductive plastic potentiometers have been specially designed for severe environmental conditions in mill-factory operations as well as in critical military applications. The molded, raised track maintains itself free from contamination of foreign particles, oil or water. The high gram pressure of the graphite composition contact on the raised track gives excellent resistance to contact bounce under punishing vibration or shock, as well as an exceptional rotational life. Such units are particularly suited for applications where trouble-free maintenance is required.

PRECISION WIREWOUND SINGLE TURN POTENTIOMETERS

PST

The wirewound family of precision single turn potentiometers provides a level of quality that has become an industry standard. Designed for applications that require extreme accuracy and high reliability, they meet or exceed most applicable military specifications. They are ideal for laboratory equipment and as standards for test bench applications. The unique design of the wiper assembly provides back-lash free operation.
The housings are machined from aluminum, brass or stainless steel. Shafts are ground and polished 303 stainless steel with either brass sleeve or precision ball bearings.
These combinations provide close linearity tolerances and high repeatability for a relatively moderate environment.

MAUREY INSTRUMENT CORP.

HEAVY DUTY LINEAR MOTION POTENTIOMETERS WIREWOUND AND CONDUCTIVE PLASTIC HDL

WIREWOUND M2028 This transducer combines the inherent accuracy and reliability of a wirewound potentiometer with the physical ruggedness required in industrial applications. They are used with hydraulic and mechanical actuators to measure and control linear motion. The self-aligning spherical ball ends and MS connector simplifies installation. High duty bearings give the ¼ inch shaft stability in the extended position.

CONDUCTIVE PLASTIC P1991 Where severe environmental conditions exist as in mills, factories and power generating plants, this linear motion transducer is practically indestructible. The unit is impervious to dust, oil and moisture. The molded, raised conductive track and graphite composition contacts provide for years of maintenance free service. As with the M2028, the self-aligning spherical ball ends and MS connector allows for ease in installation.

LIGHT DUTY LINEAR MOTION POTENTIOMETERS WIREWOUND AND CONDUCTIVE PLASTIC

LDL

WIREWOUND (M-Series) These miniature transducers combine the best electrical characteristics in the smallest size at the lowest cost. The units were designed for use in laboratory test equipment, light industrial applications and automation where great accuracy of electrical output is essential. The spherical ball ends add flexibility to mounting. These wirewound, linear motion potentiometers will meet the requirement in the majority of applications.

CONDUCTIVE PLASTIC (P-Series) Where long life in a hostile environment is required, these linear motion transducers with molded, raised tracks and graphite composition contacts have no equal. They are practically impervious to dust, water and oil. The high contact pressure resists the effects of severe vibration and shock. The units are being used in factories and mills where maintenance-free operation is essential.

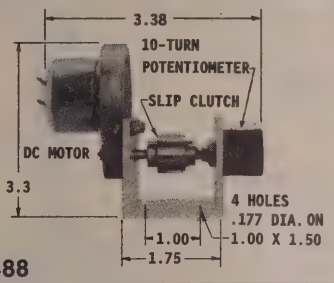
MOTORIZED POTENTIOMETERS AND SWITCHES

MPS

General Description & Applications

A family of single turn and multiturn, motor driven potentiometers and switches has been developed for industrial servo applications. They are used for such applications as variable speed controls on power generating sets, electrical-mechanical remote control, and readouts. They provide excellent accuracy at an economical price. These integrated motor-potentiometers are the result of years of Maurey experience in the manufacture of precision potentiometers and motor assemblies. The potentiometers, gear head, clutch, and motor are precisely matched to perform to exacting specifications. Motor-clutch-pot units are available in a wide range of specifications. A motor of selected speed and voltage may be matched with single, 3, 5, or 10 turn potentiometers, either wirewound or conductive plastic. When multiple voltages are required, single cups may be conveniently ganged with or without clutches. In addition, Maurey engineers can provide multi-tap potentiometers, special shafts and mountings, and a wide range of AC or DC motors to your specification.



H2488

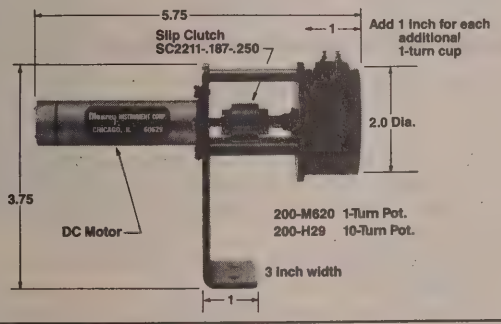
RPM	VOLTS	RPM	VOLTS
16	6	96	28
28	6	120	24
40	12	120	35
60	12	124	28
72	24	148	35

H2488 DC Motorized 10-Turn Potentiometer

This unit utilizes a DC motor, over a wide range of speed and voltages, to operate a precision 10-turn wirewound potentiometer with a ±0.25% linearity.

A slip clutch prevents damage to the potentiometer stops. Unit is suitable for a factory or mill environment.

Potentiometer independent linearity: ±0.25% or better
Power rating: 2.5 watts at 60°C
Resistances available: 500Ω, 1K, 2K, 5K, 10K, 20K, 50K, 100K.



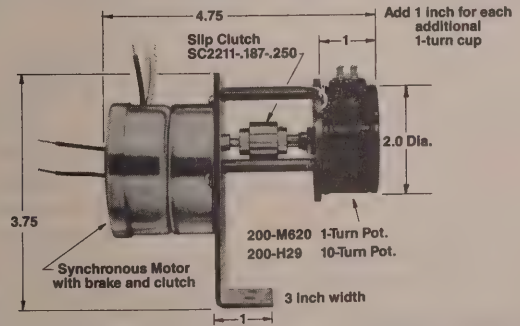
M2391

M2391 DC Motorized Single & 10-Turn Potentiometers

This is a versatile motor-potentiometer assembly. When a single turn wirewound potentiometer is specified, multipole single throw switches may be added. Up to six precision potentiometers with ±0.5% linearity of various resistance values may be ganged. All components are easily assembled or changed. Proven design for factory or mill environment.

A precision 10-Turn high resolution potentiometer with a ±0.25% linearity may be specified. A Slip clutch safeguards the potentiometer stops from being damaged.

Standard resistances available: 250Ω, 500Ω, 1K, 2K, 5K, 10K, 20K, 50K, 100K.



M2261

M2261 AC Motorized Single & 10-Turn Potentiometers

This is a compact AC motor driven wirewound potentiometer with mechanical stops. A slip clutch provides positive protection to the potentiometer mechanical stops. For continuous rotation the slip clutch is replaced by a coupling. When operated with single turn potentiometers, single throw switches are available.

1-Turn Potentiometer: ±0.5% linearity, 4 watts power
10-Turn Potentiometer: ±0.25% linearity, 4 watts power

Standard resistances available: 250Ω, 500Ω, 1K, 2K, 5K, 10K, 20K, 50K, 100K.

Motor: 115 Volts, A.C. 60 Hz; synchronous continuous duty with positive clutch and instantaneous brake; standard RPM: 1, 2, 4, 6, 10, 12, 30, 60.

Standard DC Motor Data:

Speed: (See chart)
Voltage: (See chart)
Current: (See chart)
Torque at 24 volts: 50 oz-in.
Break away voltage: 10 volts DC
Other requirements on request

M2391

Voltage VDC	ma	Speed RPM
12	49	6.0
24	50	16.0
28	51	21.2
35	53	24.5

Special Requirements

The types shown here are representative of a wide range of motor driven mechanisms manufactured by Maurey. AC or DC motors may be used. Single and multicup carbon, wirewound, or conductive plastic potentiometers may be specified, with or without slip clutches or switches. Write or phone for a solution to your requirement.

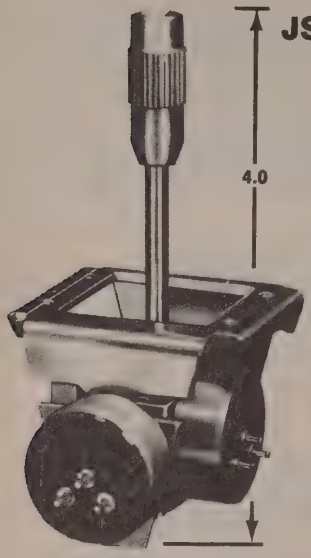
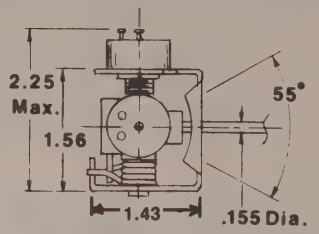
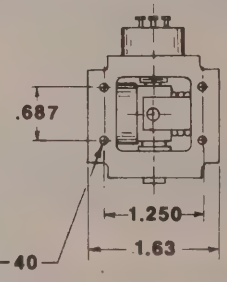
MAUREY INSTRUMENT CORP.

JOYSTICKS JSP/JSE

JSP JOYSTICK CONTROLS WITH POTENTIOMETERS







The Maurey JSP 2302 series precision joystick controls have been proven in a wide variety of applications.

Designed with long life precision potentiometers, the JSP series is available with either single, dual or triple axis control. The compact all metal construction provides a strong, reliable unit.

To better suit your application, the JSP series is available with either internal or external boot, a push button switch in the handle and a variety of knob styles.

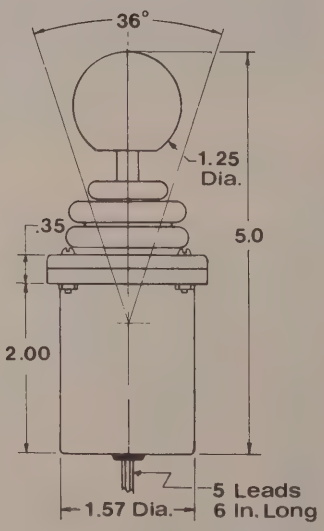
MECHANICAL SPECIFICATIONS

Spring return to center
Knob torque: 12 ounce-inches
Life: 2,000,000 cycles
Limiter Plates available to limit direction of knob.

CONDUCTIVE PLASTIC POTENTIOMETER SPECIFICATIONS

Voltage Repeatability: ±0.2%
Resistance available: (±20%): 1K, 5K, 10K, 20K
Power: 1 Watt at 25°C
Wipers phased at center of resistance.
Temperature Range: —30° to 105°C

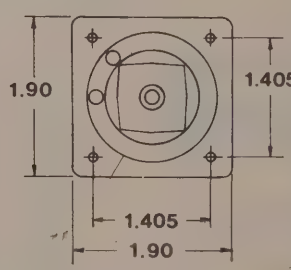
JSE INDUCTION TYPE JOYSTICK CONTROL

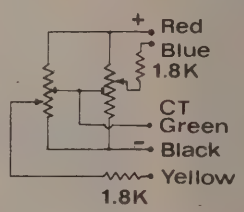


The Maurey JSE 2304 Joystick Control is a non-contacting, inductive device which provides extremely long life, infinite resolution and zero noise. Inherent in the design is a constant output throughout the life of the unit.

A shaft seal boot is supplied on all units to protect the mechanism from moisture and dust.

The electronic circuitry is encapsulated in an anodized aluminum case resulting in an assembly which is compatible to most hostile environments.





Equivalent Circuit

ELECTRICAL SPECIFICATIONS

Operating Voltage:	4.5 to 15.0 Volts, D.C.	Center Tap Voltage:	50% of Input Voltage
Current:	15 ma at 10 Volts, D.C.	Resolution:	Infinite
Output Impedance:	1800 ohms (Signals)	Life:	20,000,000 cycles
Center Tap Impedance:	340 ohms	Leads:	6 inch standard length, color coded
Equivalent Noise Resistance:	None		
Temperature Range:	—30° to 105° C	Knob has spring return to center.

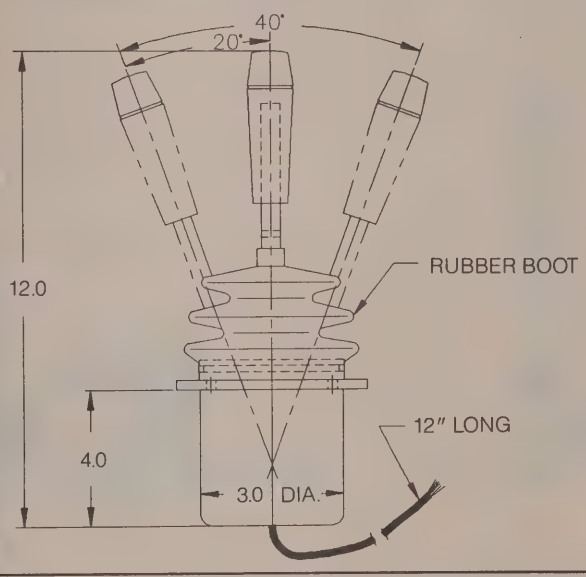
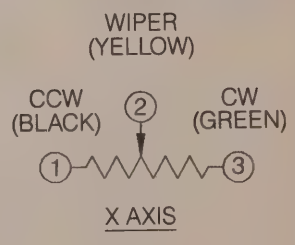
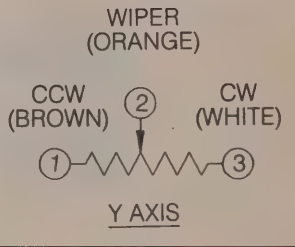
MAUREY INSTRUMENT CORP.

HEAVY DUTY JOYSTICK CONTROL HDJ

The Maurey HDJ series precision industrial joystick fills the need for heavy duty controls. Designed specifically for construction and large industrial equipment, they have been proven in a variety of industries. Overhead crane controls, Marine hoists, Man lifts and Cherry pickers are just a few of the many applications. Constructed of rugged materials, the unit incorporates conductive plastic potentiometers for extremely long life with essentially infinite resolution. A heavy duty shaft boot seals the unit from the environment. Variations are available with single axis control. Special configurations available to your specifications. The HDJ series joystick is ideal for your control requirement and will provide years of trouble free service in a harsh environment.







ELECTRICAL AND MECHANICAL SPECIFICATIONS

MECHANICAL SPECIFICATIONS

Major axis operationing angle: 40° Total
Spring return to center
Life: 5,000,000 cycles
Limiter Plates available to limit direction of knob.

MATERIALS

Case: Molded Glass Filled Nylon
Lever: Stainless steel
Trunnions: Anodized aluminum
Bearings: Brass

CONDUCTIVE PLASTIC POTENTIOMETER SPECIFICATIONS

Resistances available: 5K, 10K
Resistance tolerance: ±20%
Voltage Repeatability: ±1%
Wipers phased at center of voltage
Output from center: ±6% of applied voltage
Power: 1 Watt at 25° C
Temperature Range: –30° to 85° C

Available with rocker switch in the handle. Specify Knob style J.

MAUREY INSTRUMENT CORP.

SINGLE AXIS JOYSTICK CONTROLS WITH POTENTIOMETER

SAJ

The type SAJ single axis joystick control is the ideal choice for those industrial applications where a single plane of travel is to be controlled. Such devices are used to control the speed of a single motor, or to determine the back and forth motion of a hydraulic or pneumatic cylinder.

Both units are spring return to center for zero reference. They are available with either lever type or rotary actuator and will adapt to almost any mounting configuration. The bushing type potentiometer facilitates installation.

The precision conductive plastic potentiometer uses the unique Maurey rased molded track, resulting in almost unlimited life. In addition, this design insures that the potentiometer is impervious to moisture, oil, dust and industrial gases.

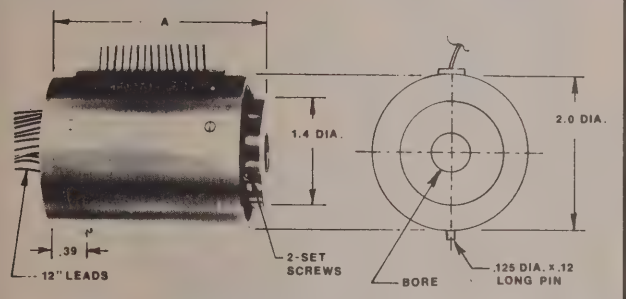
CHART Y

STANDARD BORE SIZES	
1/4	.250
3/8	.375
1/2	.500
5/8	.625

Standard with 2, 4, 6, 8, or 10 conductors. There are 3 sliding contacts per conductor.

The coin silver collector rings and precious metal contacts provide long life and low noise operation for instrumentation use. The collector ring/brush sets can be stacked or "pancaked" for multiple application. These units are particularly useful where there is limited axial width.

With a wide variety of diameter and bore sizes available, the SR2300 is ideal for strain gage and thermocouple measurements where rotating data circuits must be monitored



SR2066 SIGNAL LEVEL SLIPRINGS

RINGS	A
2-5	1.80
6-10	2.30
11-15	2.80
16-20	3.30
21-25	3.80
26-30	4.30

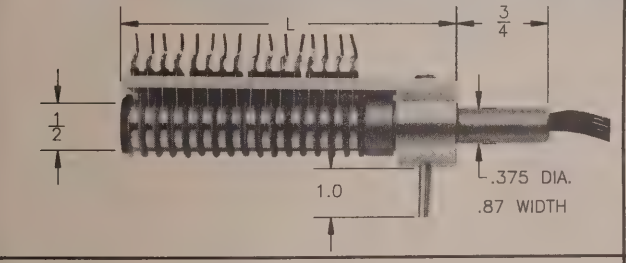
Current capacity per conductor: 250 ma
Dielectic strength: 750 volts, RMS
Temperature range: −55° to 105° C
Leads: Teflon insulated, 12" long.

Maximum speed: 1200 rpm
Life: 25,000,000 Rev.
Noise level: 50 milliohms
Std. bore sizes: 1/2", 5/8", 3/4"

The SR2066 totally enclosed slipring assembly is used for industrial and military applications where low signal noise is essential. Enclosed ball bearings support coin silver rings with gold-platinum alloy brushes.

Aluminum housing with O-ring seals, effectively protects the rings and brushes from the environment

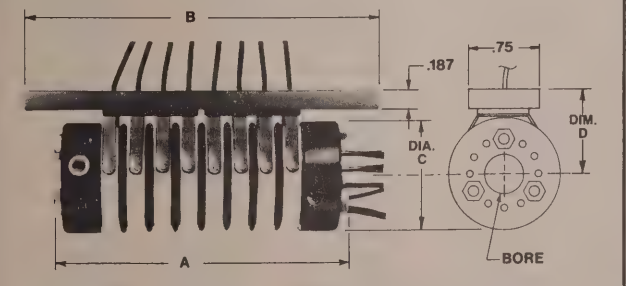
Manufacturers of industrial equipment requiring signal feedback and low current input rely upon this precision slipring for long life and trouble free service. They are used in laboratory instrumentation, fire control, meteorological circuits and for numerous automation applications.



SR2557 ROTARY SIGNAL SLIPRING

The SR2557 is a small unit designed for those applications where it is necessary to couple a slip ring to a rotating shaft. It is a unique design and is installed as a complete one piece unit. The rotating member is supported by dual stainless steel ball bearings. The rings and contacts are precious metal for low noise.
Current: 500 ma. Noise: 50 Miliohms, Speed: 3000 RPM max.

RINGS	L
4	1.77
8	2.32
12	2.87
16	3.42
20	3.97



ROTARY TYPE SLIPRINGS

The SR2310 standard sliprings fill a need for a low cost yet highly reliable means of medium power and signal transfer to and from a rotating shaft.
Two standard assemblies are used, a rotary slipring with 4 to 12 conductors and a stationary brush block assembly providing 2 contacts per ring. The slipring assembly is mounted on the rotating shaft. The brush assembly is attached to the machine by 4 screws. Long life precious metal contacts and coin silver rings insure low noise signals and conducts 2 amperes. Noise level: 50 millohms, Dielectric Strength: 750 volts RMS for 60 sec., Leads: AWG 22, PVC. 12" long, Contacts per ring: 2.

2.00	.50	2035-60-2	3.500	.250

Maurey SR2035 standard power sliprings are designed and built for rugged industrial applications. They are being used in wind power generators, packing machinery, chemical processing equipment and in automated applications.

They are available in eight standard diameters with suitable bores to fit most equipment. The larger units are available with up to 50 rings. All parts are precision machined or molded.

Standard brushes are rated at 7 amps. with a max. of 3 brushes per ring. With 3 heavier brushes and wider rings, current capacity can be increased to 75 amps. per ring
Length (C): 1.25 + .50 per ring.

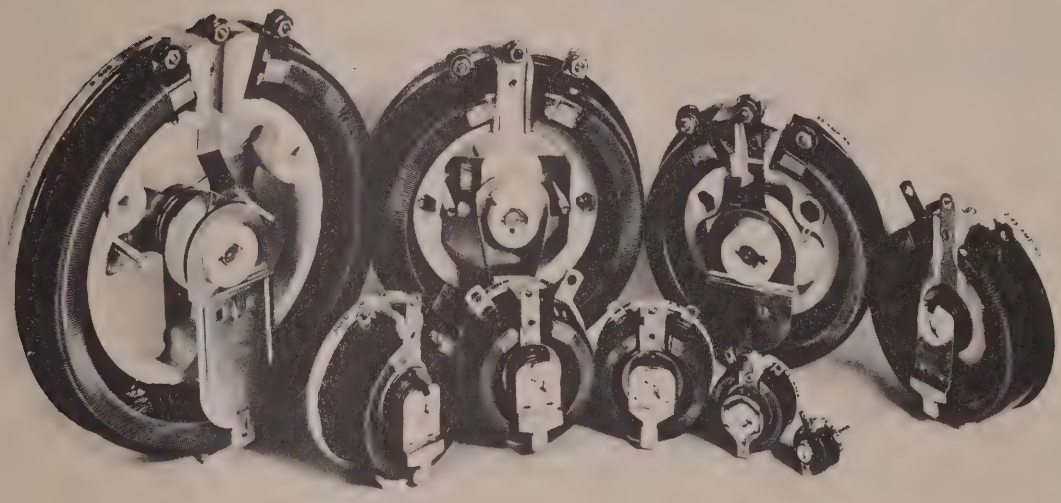
POWER RHEOSTATS

MEET THE MEMCOR FAMILY OF HIGH QUALITY WIRE-WOUND POWER RHEOSTATS



All MEMCOR Power Rheostats are vitreous enamel coated. The core and base are bonded together with vitreous enamel, thereby contributing markedly to the heat dissipation.

Standard tolerance: ±10%, ±5% available as a special.

TYPE	POWER (Watts)	RESISTANCE RANGE	DIAMETER	WEIGHT
R12½	12½ Watt	1 - 5000 Ohms	7/8"	.035 Lbs.
R25	25 Watt	1 - 5000 Ohms	1 1/16"	0.23 Lbs.
R50	50 Watt	0.5 - 10,000 Ohms	2 15/16"	0.45 Lbs.
R75	75 Watt	0.5 - 10,000 Ohms	2¾"	0.60 Lbs.
R100	100 Watt	0.5 - 10,000 Ohms	3⅛"	0.72 Lbs.
R150	150 Watt	0.5 - 10,000 Ohms	4"	1.50 Lbs.
R225	225 Watt	1 - 2500 Ohms	5"	2.18 Lbs.
R300	300 Watt	1 - 2500 Ohms	6"	3.0 Lbs.
R500	500 Watt	1 - 2500 Ohms	8"	3.75 Lbs.
R1000	1000 Watt	1 - 2000 Ohms	12"	10.0 Lbs.

Special Rheostats with Tapered Sections, Locking Devices, Off Positions, Tandem Mountings, Special Shafts on Bushing, and many other variations can be supplied.

Notes:
1. Temperature Coeffient of resistance is 100 ppm/°C maximum. This may vary at high and low resistance values. See catalog for details.
2. All models pass immersion at 85°C.
   *Available in military RJ & RJR versions.

chip trimming potentiometers

MURATA ERIE NORTH AMERICA

RVG3A

The SMT RVG3A Series of chip trimming potentiometers features an exceptionally low profile—just 1.5 mm above the PC board—allowing higher component densities than possible before. Its alumina substrate and cermet resistance element provide long term reliability and are designed to withstand the stress of both flow and reflow soldering operations.

FEATURES

- Ultra-low profile—just 1.5 mm H.
- Extremely light weight
- Nickel barrier layer terminations for solderability
- Suitable for both flow and reflow soldering
- Offered on 8 mm tape for auto-placement
- Standard screw driver adjustable
- Suitable for auto-tuning (RVG3A08)

SPECIFICATIONS

Resistance Range	200Ω to 2MΩ
Resistance Tolerance	±25%
Taper	Linear
Power Rating	1/10W at 70°C
Maximum Working Voltage	50 VDC
Operating Temperature Range	−55°C to 125°C
Rotational Torque	2.0 to 24.5 mNm
Effective Rotational Angle	270°, ±10°

RVG4

The RVG4 Series has presoldered electrodes to facilitate surface mounted auto-placement and reflow soldering. They are also available with conventional lead type terminals. The wide 200° rotational angle improves performance and resistance range.

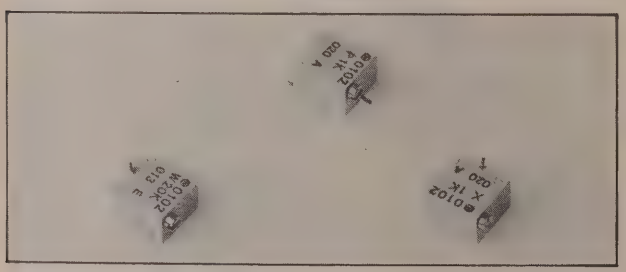
FEATURES

- Miniature size—3.8 × 4.5 × 2.3 mm for close close component spacing
- Easily adjusts with regular screwdriver
- Large, solid axle not affected by vacuum chuck during auto-placement
- Nickel plated, solder coated terminals eliminate solder leaching in reflow soldering operations
- Tape packaging available for auto-placement

SPECIFICATIONS

Resistance Range	100ohms to 2 Megohm
Tolerance	±25%
Temperature Coefficient	±250ppm/°C
Taper	Linear
Power Rating	1/10W (at 70°C) Derated to 0 Watts at 125°C
Max. Working Voltage	50 VDC
Torque	.27 to 2.8 in.-oz.
Effective Rotation	Elec. 200° ±10°

POTO102



FEATURES:

- Miniature size—.250″ × .250″ × .169″
- 12-turn
- Will withstand industrial cleaning processes
- Cermet resistance element
- For surface mount applications
- Reflow solderable

SPECIFICATIONS

Resistance Range	10 ohms to 1 Megohm
Tolerance	±10%
Temperature Coefficient	±100ppm/°C
Residual Resistance	2 ohms max.
Power Rating	0.25W at 85°C. Derated to 0W at +125°C
Working Voltage	200 VDC max.
Operating Temp. Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max., whichever is greater
Dielectric Strength	600 VAC
Insulation Resistance	1,000 Megohms min. at 500 VDC
Torque	3.0 in.-oz. max.
Effective Electrical Adjust.	12 turns, ±2 turns

MURATA ERIE NORTH AMERICA 220 Lake Park Dr., Smyrna, Georgia 30080 Tel: 1-800-831-9172 Telex: 26-1301 FAX: 1-404-684-1541

sealed precision cermet trimming potentiometers—±100 ppm/°C

MURATA ERIE NORTH AMERICA

3321 Single Turn, 1/2 Watt

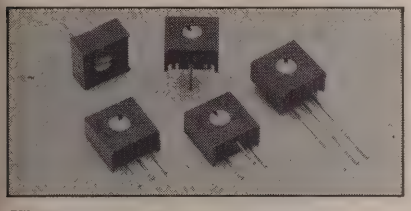
FEATURES

- Flame retardant rotor meets UL94V-0 requirements
- Extremely small size — .260″D. x .181″
- Sealed to withstand wave soldering and immersion cleaning processes
- Can be packaged for auto-insertion

SPECIFICATIONS

Resistance Range	10 ohms to 5 Megohms
Tolerance	±20%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +150°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +150°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

3104 Single Turn, 1/2 Watt



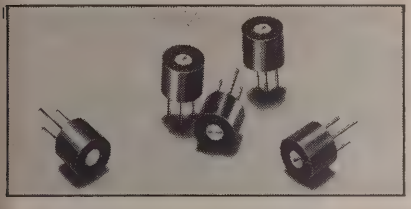
FEATURES

- Low cost
- ⅜″ square

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	2 ohms max.
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	1% or 1 ohm max. whichever is greater

1102, 4-Turn, 1/2 Watt



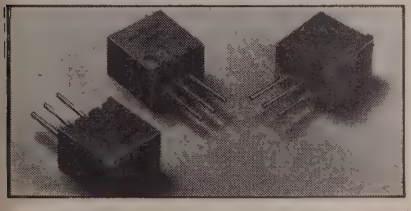
FEATURES

- Unique planetary drive provides the precise setting capability of a multi-turn unit in a small single-turn package
- Just .299″D x .260″
- Sealed to withstand wave soldering and immersion cleaning process

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

3106, 25-Turn, 1/2 Watt



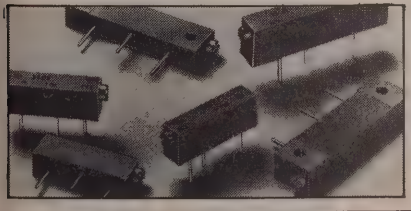
FEATURES

- Small size — .374″ x .394″ x .200″
- Sealed to MIL-R-22097 standards. Will withstand industrial cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	0.5W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

2103, 15-Turn, 3/4 Watt



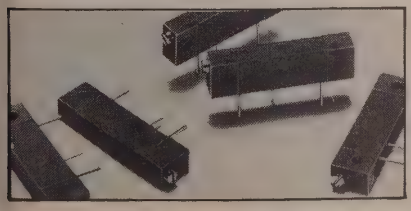
FEATURES

- Small size — .181″ x .252″ x .752″ for close board spacing
- Sealed to MIL-R-22097 standards. Will withstand industrial cleaning processes

SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	3% or 1 ohm max. whichever is greater
Power Rating	0.75W at 70°C. Derated to 0W at +125°C
Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +125°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

2102, 22-Turn, 1 Watt



FEATURES

- 22-turn mechanism provides extremely fine adjustment capability
- High power dissipation: 1.0W at 70°C
- Sealed to withstand wave soldering and immersion cleaning processes

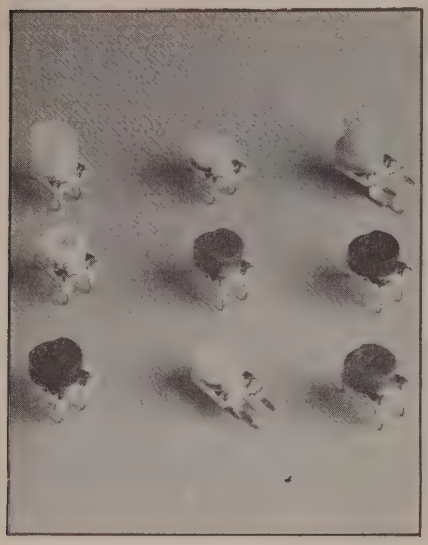
SPECIFICATIONS

Resistance Range	10 ohms to 2 Megohms
Tolerance	±10%
Residual Resistance	1% or 2 ohms max. whichever is greater
Power Rating	1W at 70°C. Derated to 0W at +150°C
Max. Working Voltage	300 VDC max.
Operating Temperature Range	−55°C to +150°C
Contact Resistance Variation	3% or 3 ohms max. whichever is greater

MURATA ERIE NORTH AMERICA 220 Lake Park Dr., Smyrna, Georgia 30080 Tel: 1-800-831-9172 Telex: 26-1301 FAX: 1-404-684-1541

single turn, low cost trimming potentiometers

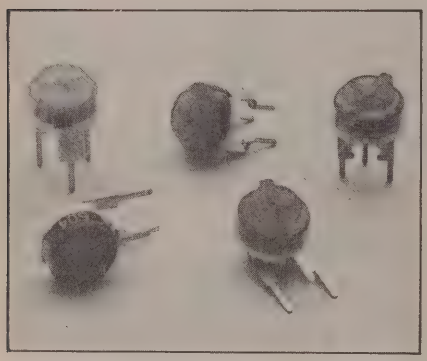
MURATA ERIE NORTH AMERICA



1/5 to 3/4 Watt, Carbon, Plastic & Cermet—0911

Characteristic	RVX (Carbon)	RVG (Cermet)
	0911	0911
Resistance Range:	100– 2 Megohms	100– 1 Megohm
Tolerance:	± 20%	
Residual Resistance:	Less than 500Ω, 5Ω maximum 500Ω and up, less than 1% of nominal rated resistance	
Taper:	Linear	
Power Rating:	1/5W (70°C)	1/2W (70°C)
Max. Working Voltage**:	250 VDC	350 VDC
Torque:	0.56-4.86 in.-oz.	0.56-4.86 in.-oz.
Terminal Strength:	35.27 oz.	
Effective Rotation: Elec.	240°C	240°C
Mech.	260° ± 10°	260° ± 10°
Stop Strength:	13.9 in.-oz.	

*Derated to 0 watts at 100°C (for Carbon), at 125°C (for Cermet)
**Max working V varies with resistance value. Vmax = $\sqrt{\text{Resistance} \times \text{Power}}$



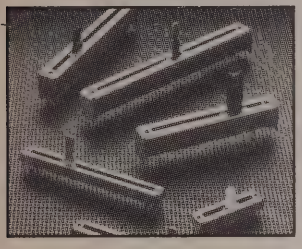
1/3 Watt, Cermet—RVG0707

Resistance Range:	100 ohms to 1 Megohm
Tolerance:	±20%
Temperature Coefficient:	± 250ppm/°C
Residual Resistance:	100 to 500 ohms — 5 ohms max. Over 500 ohms — 1% max.
Taper:	Linear
Power Rating:	1/3 W (at 70°C) Derated to 0 Watts at 125°C
Max. Working Voltage:	100 VDC
Torque:	.27 to 2.8 in.-oz. (20 to 200 g cm)
Terminal Strength:	12.35 oz. (350 gr) when the force is applied in the direction of the axes of the terminal
Effective Rotation:	200° ±10°

NOBLE

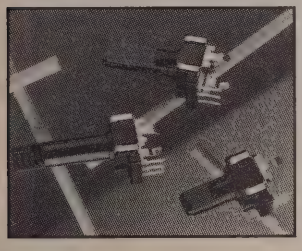
Slide and Rotary Potentiometers Surface Mount Trimmers and Switches

Whatever your application, Noble has the product specifically designed to meet your most demanding performance and quality specifications.



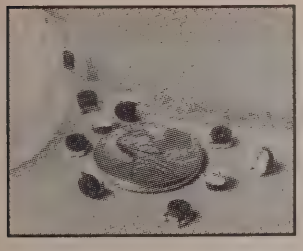
Slide Potentiometers

- Low-Profile Series — Single and dual element available in 15, 20, 30, 45 or 60 mm travel
- High-Profile Series — Single and dual element features 30, 45, or 60 mm travel
  Single element available in 80 and 100 mm travel
- Smooth operation and long life
- Option of insulated or metal levers



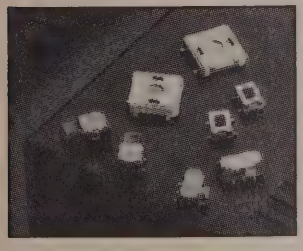
9mm Rotary Potentiometers

- Film base element provides smooth/low noise operation
- Snap-in mounting bracket for vertical or horizontal mounting
- Available with Audio, Linear or Reverse Audio Tapers
- Resistance range of 5KΩ – 500KΩ



Surface Mount Trimmers

- 3 mm and 4 mm cermet trimmer potentiometers
- Metal glaze element provides stability for high operating temperatures
- Designed for reflow soldering techniques
- Available in tape and reel format



Surface Mount Switches

- Miniature surface mount switches in three styles: tactile, push or slide
- Tactile switches feature sharp detent click and sealed construction
- Low-current, 2-circuit push switches have a travel length of 2.5 mm
- 2- or 3-position slide switches designed for reflow soldering

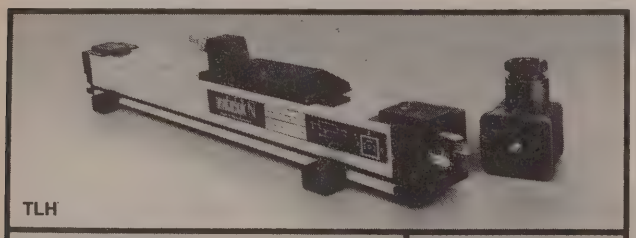
Displacement Transducers • Rotary and Rectilinear

Novotechnik U.S.'s family of rotary and rectilinear displacement transducers features outstanding linearities, high tolerance to environmental extremes, and long operating lifetimes (typically 100 × 10^6 operations).

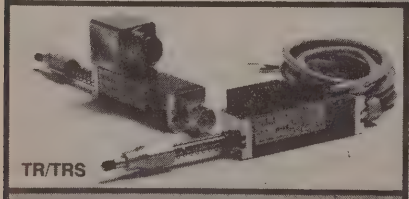
The position transducers and rotary potentiometers have conductive plastic resistance and collector tracks, and use multi-fingered elastometer-damped precious metal wipers.

The linear transducers offer a range of electrical strokes from 25mm to 4000mm, with resolution better than .01mm and linearities as low as 0.01%. Operational speeds are typically as high as 10 m/s.

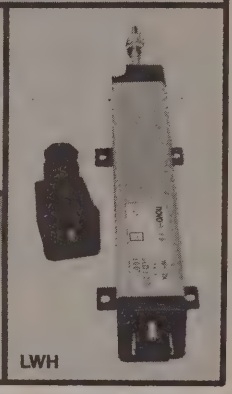
The rotary potentiometers give 360° of mechanical rotation, operational speeds to 10,000 rpm, accelerations to 50,000 rad/s², linearities to 0.02% and resolution better than 0.01°.



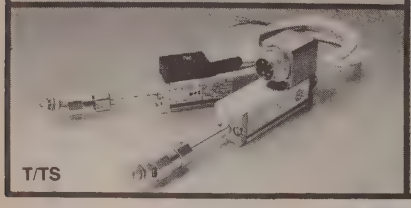
TLH



TR/TRS



LWH



T/TS

Linear Position/Displacement Transducers

TLH Series Features side actuation and ball coupling to eliminate offset errors, and twenty-one stroke lengths from 100-4000mm. Independent linearity is between ±.07% and ±.01%; resolution is .01mm.

LWG Series Ruggedized for use in rigorous mechanical testing applications, the LWG can be mounted over swivelling pivot heads with up to ±30° of movement, eliminating side load errors. Eight stroke lengths are available from 150-750mm, with linearity to ±.05%.

LWH Series Features pivoting front bearing and range of connectors: DIN, Binder, or Amphenol. Eleven stroke lengths are available from 75 to 900mm, with independent linearity between ±.07% and ±.01% and resolution of .01mm.

TR/TRS Series Displacement transducer with stroke length of 25, 50, 75 or 100mm, return spring and double bearings. Linearities range from ±.2% to ±.15%; 3-core cable or plug-and-socket connections are available.

T/TS Series Features double precision bearings and anti-rotation mechanism for load-free operation, five stroke lengths from 25 to 150mm, and linearities from ±.2% to ±.075%. Two alternate electrical connections are available: via 3-core cable (type T) or plug-and-socket (type TS).

Resistance Elements Novotechnik U.S. offers resistance elements with stroke lengths between 25 and 4000mm and wipers for integration into a customer's system or device. Special customized versions are available.

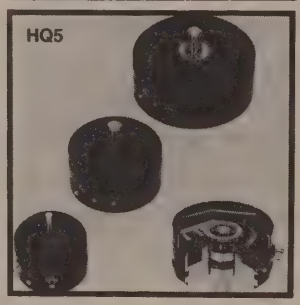
Custom-designed Transducers

Novotechnik U.S. welcomes inquiries from design engineers with special needs for sensing and transmitting motion, position and displacement. We welcome custom designs and the opportunity to quote on any unique requirement you may have. For more information call us at 508-485-2244 (fax: 508-485-2430).

LWG

Integrated Bearing

resistance elements



HQ5

Rotary Potentiometers

Integrated Bearing Series Industry's first rotary potentiometer with a single integrated main bearing. The innovative design improves reliability and performance, giving linearities to ±.02% (servo size 20). Also available are sizes 9, 11, 11 (low torque), and 13.

HQ5 Series Novotechnik's standard units for machinery and instrumentation. Linearities of ±.05% (servo sizes 9, 11 and 13) and ±.025% (size 20) are achieved through final stage trimming of fully assembled potentiometer. Max. operational speed 10,000 rpm; acceleration 50,000 rad/s².

Resistance Elements Rotary potentiometer elements are available with wipers for incorporation into customers' devices as integral potentiometers.

Special-Purpose Potentiometers Novotechnik U.S. offers rotary potentiometers for a wide spectrum of applications:

- Low Torque Potentiometers...for angular measurement without loading
- Industrialized Potentiometers...for use in harsh environments
- Sensor Potentiometers...specially developed for the automobile industry
- Geared Potentiometers...for use in harsh environments with backlash-free gearing for 3, 5 or 10 turns
- Motorized Potentiometers...self-contained units with speeds from 120°/s to 360°/s and output torque from 10Ncm to 100Ncm.

TOTAL CONTROL

Joysticks

Penny & Giles is a leading source of expertise for motion control projects and offers total capability in design, manufacture, and quality approvals. A comprehensive product range is available from stock, suited for diverse applications, with customized features when requested. Production model proportional controllers include COMPACT joysticks for finger and thumb control, rugged units for INDUSTRIAL use and SWITCH joysticks for non-proportional control. These versatile controllers can have additional outputs, detents, optional handles, switches and put and stay mechanisms.

From sophisticated 3 axis missile control to rugged hydraulic applications, Penny & Giles will put total control at your fingertips.

- 1,2 and 3 axis control
- Analog or digital output
- Heavy duty, fully sealed models
- Military approved models

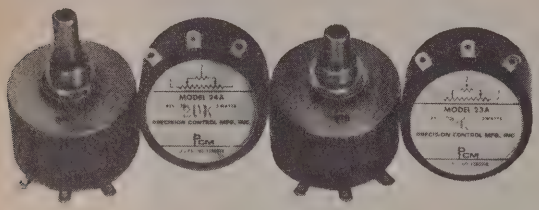
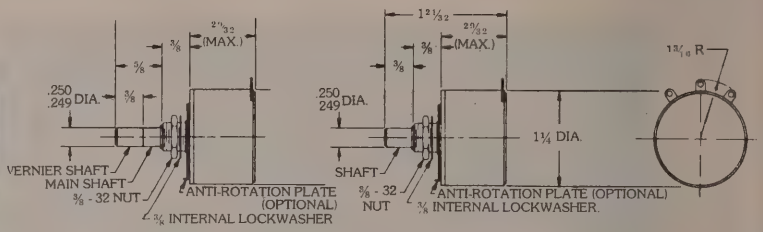
HIGH RESOLUTION VERNIER POTENTIOMETERS





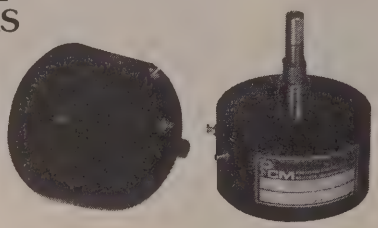
Models 23A and 24A Vernier potentiometers feature high and very high resolution because of their unique design. Coupled both electrically and mechanically, they allow any fixed portion of the coarse element (5% or less) to be expanded over the 270° of shaft rotation on the vernier. Total rotation is 555° (1.5 turns) and a 5% vernier presents a resolution roughly equivalent to a 3600° (10 turn) model; a 2.5% vernier is about equivalent to a 7200° (20 turn) model; a 1% vernier is approximately equivalent to a 18000° (50 turn) model.

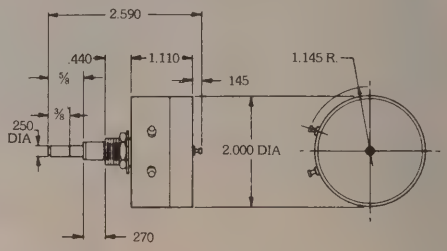
Customized products are available with modified shafts. R_t (total resistance), tolerance, P_v (vernier percentage), and torque. Please consult the factory with your unique requirements.

All PCM potentiometers are wire wound; standard values are from 100 ohms to 100K ohms ±3%.

We sell quality and service and we stand behind what we sell.

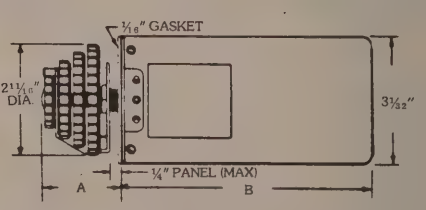
DOUBLE VERNIER POTENTIOMETERS





For applications requiring extremely high resolution, the Model 30A Vernier Potentiometer provides 0.002% or better resolution in less than 2½ turns of the shaft. The 30A does not rely on gear ratios to achieve mechanical resolution, but through a unique patented design, provides true electrical resolution which is roughly equivalent to 40 turn potentiometers. The vernier contacts span any 5% of the main winding and expand it over the 280° rotation of the first vernier. Any 5% segment of the first vernier is in turn expanded over the 270° rotation of the second vernier. Thus extreme resolution is possible in only 830° of total shaft rotation.

HIGH ACCURACY DECADE POTENTIOMETERS AND RHEOSTATS



Precision Control Mfg., Inc. (PCM) produces high quality, coaxial dial decade potentiometers and rheostats for high accuracy applications. The basic design features a positive in-line readout and easy, rapid adjustment made possible by a combination of distinct dials and a parallax free indicator. The unique electrical and mechanical design of PCM decades makes a small and accurate package which is very rugged.

Decade potentiometers provide linearities ranging from ±0.005% in the model 50A to ±0.0025% in the model 60A. All PCM rheostats have an accuracy base of ±0.025%.

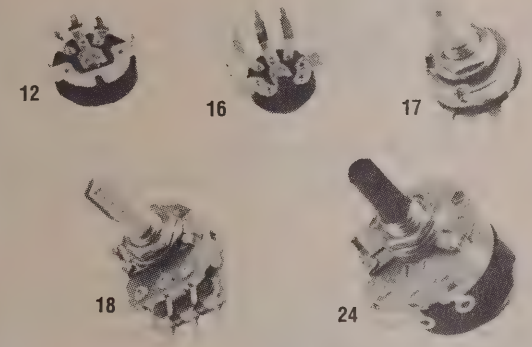
All PCM decades are available in militarized versions which meet or exceed the environmental portions of MIL-E-5272C, Sections 4.2.2, 4.3.1, 4.4, 4.6 through 4.11.2, 4.12, 4.15 and MIL-T-945A, Sections 4.4.1 through 4.6. Resistors used in PCM decades are wound with only premium resistance alloys for low temperature coefficients and are single layer wound, with low inductance making possible precision attenuation over a wide range of frequencies. Switch decks utilize low leakage materials and feature gold plated silver contacts. The case is heavy gauge aluminum to provide shielding and dust protection, shafts are of stainless steel.

RDI ELECTRONICS INCORPORATED

The following information is excerpted from our catalog. Please contact us for your complete guide to the components available from RDI Electronics.

POTENTIOMETERS

RDI Electronics offers both rotary & slide potentiometers in a wide range of sizes and mounting configurations. From our ultra thin low profile rotarys to our 100mm "Easy Glide" slide potentiometer, RDIE can satisfy your requirements. Linear, Log, and Anti-Log resistance tapers available.



ROTARY TYPE ELECTRICAL SPECIFICATIONS					
	φ12	φ16	φ17	φ18	φ24
Total Resistance	1 to 500KΩ±20%				
Power Rating (Taper B)	0.1W	.2W			0.5W

FOR THE JAPANESE, *SHOKAI* MEANS INTRODUCTION

WHAT DOES *SHOKAI* MEAN FOR YOU? (HINT: IT MAKES YOUR IDEAS PROFITABLE)

Let's face it. As a source for electronic and electromechanical components, the quality and pricing of the Far East can't be matched on our side of the ocean. But you can't go to the Far East whenever you need to source a product.

That's why, if up to now, your knowledge of Japanese was limited to "sushi" and "sayonara", we respectfully suggest that you learn another word . . . SHOKAI®. . . Your introduction to the Far East.

SHOKAI® is an American company, with over 30 years experience manufacturing and importing components from the Far East. We were serving American manufacturers long before everybody with a fax machine and a foreign telephone book could claim to be an overseas supplier. And we will be here long after they are gone.

We speak your language. We understand you - your time frames - your requirements - your problems – the quality and personal attention you and your customers demand. As hundreds of "Top 500" companies have learned, let SHOKAI® be your source for components from Japan, Taiwan, Hong Kong and the rest of the Far East.

OUR PRODUCT LINE INCLUDES:

- Capacitors (Fixed and Variable)
- Coils and Chokes
- Crystals, Filters and Oscillators
- Diodes (IR, LED, Photo, PIN, Silicon)
- Filters (Photocells, Sensors & Diodes)
- Potentiometers (Carbon, Cermet, Linear & Nonlinear, Single & Multi-turn & Trimmer)
- Transducers
- Transformers (Audio, IF, RF, Switching, Telecommunications, Toroidal)

And many more. Try us. You can start by requesting a catalog. Let us know what product you're looking for. Or better yet, tell us exactly what you want. You won't be disappointed.

Why don't you use your new word as soon as possible. You won't have to eat raw fish to try it. Just pick up your phone. We're waiting for your call.

Trimming, Slide and Rotary Potentiometers

When reliability is critical...

Tocos examines the performance of its products long after their sale, through the widely used FIT, or failure rate in the field methodology. Of the one-hundred million units of our GF06 series produced over a 7-year span, **less than 1ppm failed** for a 0.06 (FIT) failure rate in the field.

Rotary Single-Turn Potentiometers Linear-Functional/Sine-Cosine

Multi-Element Assemblies Available (Ganged)

Available From 1/2" to 5" Diameters

SPECIFICATIONS

	Linear	Sine-Cosine
Mechanical Rotation	360° Continuous	
Electrical Function Angle	350° Nominal	360°
Resistance Range	0.5KΩ-2 MegΩ	500Ω-50KΩ/Quad
Best Linearity or Conformity	.1% ÷ Inch of Dia.	.3% P-P ÷ Inch of Dia.
Virtual Resolution	1/250,000	
Wattage	Diameter x 2 Watt(s)	
Temperature Range	–55°C to +125°C	
Taps, Maximum No.	Diameter x 6	
Starting Torque (In.-Oz.)	Diameter x .15	Diameter x .2
Guaranteed Life (at 100 RPM)	To 30 Million Cycles Depending on Circuitry

A COMPANY OF VISHAY

VISHAY RESISTORS

Precision Bulk Metal® Foil Trimming Potentiometers

VISHAY Precision Trimmers have the Bulk Metal® foil resistive element which possesses a unique inherent temperature and load-life stability. In addition, their advanced, virtually backlash-free adjustment mechanism makes them easy to set quickly and accurately and keeps the setting exactly on target.

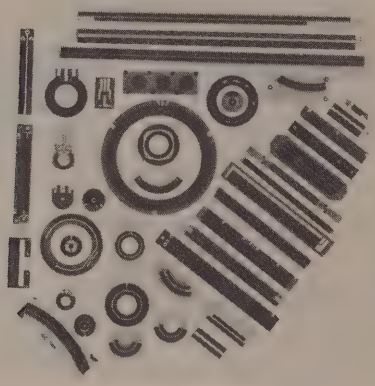
POSITION FEEDBACK

Repeatable to .0005″
Design it in—your way!



Waters built in servo-feedback elements simplify design and cut costs.

Why box yourself in with "packaged pots"—and linear-to-rotary conversions, and linkages, and costly housings, shafts and bearings you don't really need? Design position or motion feedback *your* way—with our long-lasting, low-noise, custom-made feedback elements.

We can supply squares, circles, strips—any geometric shape you need in linear and non-linear plastic elements. You'll save time. Cut costs. And chances are you'll improve performance. Send today for full information. Or call (508) 358-2777.

LONGFELLOW® POSITION TRANSDUCERS

If you have the need to measure and control linear position with high accuracy, reliability and millions of operations, Waters offers an extensive range of sizes, linearities, and stroke lengths for applications ranging from heavy industrial equipment to space satellites.

Controller-compatible, these devices provide accurate position sensing, position feedback or programmable setpoint control with repeatability to .0005".

With built-in features like Myst**R**® conductive plastic elements and collectors, precious metal contacts, precision aluminum extruded housings, and stainless steel shafts, these devices can provide up to 100 million operations.

For the long (96") and short (1/2"), Waters transducers are the buy of the times.

Standard models available from stock. Unique, custom designs are our specialty.

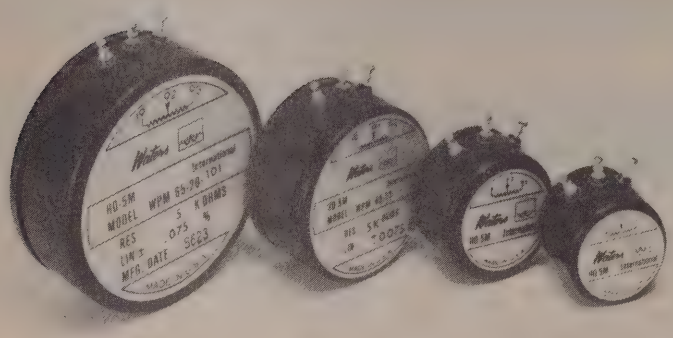
SERVO POTS

True Positional Output



Finally, a line of servo-mount potentiometers with true transducer performance that tells your machine where it really is. Waters' new HQ-5M International Standard Series uses our newly designed "ZB"® zero backlash wipers (patent pending) that provide *true* positional output in high speed, dynamic feedback or measuring systems.

- Long life with Waters' MystR® conductive plastic resistance elements—250x10^6 cycles, minimum
- Dither life 10^9 cycles, minimum
- Hysteresis less than 0.01 degrees
- Accuracy $<$0.1% APA (Absolute Positional Accuracy)
- Meets all applicable MIL-R-39023 specifications

HQ-5M series are available from stock in 4 standard servo sizes 9, 11, 13 & 20 (7/8", 1 1/16", 1 7/16" and 2").

TORQUE WATCH® GAUGE

Waters' Torque Watch Gauge, the world's standard for measurement of low torque values from 0.003 oz. in. to 200 oz. in. Now also available in Metric (gram-cm) and S.I. units. Waters also provides the Torque Watch Gauge Calibrator for on-site calibration and standardization.

Send now for detailed brochure.

Source-Control Processing

through S Level

BKC is recognized as a leader in Source Control processing.

Our processes are rigorously controlled from wafer fab to packaging. Stringent control allows us to produce parts to your exact standards.

Customers who want components made to special standards have a simple means of specifying the processes. The description below is designed to make your inquiries and orders fast and efficient.

For a price and delivery quotation, choose up to six procedures, one from each of the six groups: blocks "1" to "6". Specify any required electrical test from our list on the following page. Furnish your Source Control Drawings if the block 4 group Is "H".

EXAMPLE:

This code set —

1	2	3	4	5	6
A	-	E	H	K	P

Requires these specifications —

Pre Cap Visual Inspection
No High Temp Storage Test
Internal Visual Inspection
Refer to Supplied Document
25°C tests will not require recording
25°C tests performed before and after power burn-in. Mark parts, set aside samples

A — Pre Cap Visual Inspection Required
B — Pre Cap Visual Inspection Not Required
E — Internal Visual Inspection Required
F — Internal Visual Inspection Not Required
J — Read and Record Required
K — Read and Record Not Required

1 2 3 4 5 6

C — HT Storage, Temp Cycle, Gross Leak
D — HT Storage, Temp Cycle, Const Accell, Fine Leak, Gross Leak
G — Standard—Refer to Device Parameters
H — Special—Specify in Source Control Drawings
L — 25°C Test, HTRB Burn-in, 25°C Test, 10% P.D.A., Custom Mark, Group A Sample
N — Custom Mark, Group A. Sample (No 25°C Test Required)
M — 25°C Test, HTRB Burn-in, 25°C Test, Power Burn-in, 25°C Test, Drift Criteria, Custom Mark, Group A Sample
P — 25°C Test, Power Burn-in, 25°C Test, Custom Mark, Group A. Sample

High Reliability Testing

BKC has one of the largest burn-in capacities in discrete semiconductors today. In addition, BKC's test lab has been approved per MIL-S-19500, and is one of the largest in the industry.

We not only test our parts in-house, we provide testing services to customers and other suppliers.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A
A/D acrylonitrile butadiene-styrene
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AFC audio frequency control
AFT automatic filter test
ALGOL algorithmic language
AM a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
ASIC application specific IC
ATE automatic test equipment
ATG automatic test generation
AWG American wire gauge

B
BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility syste

C
CAD computer-aided design
CAE computer-aided engineering
CAM computer-aided manufacture
CAMAC computer-automated measurement and control
CAPP computer-aided process planning
CAT computer-aided test
CATV cable television or community antenna television
CCC (leaded) ceramic chip carriers
CCD computer-controlled display
CERMET ceramic metal element
CIE computer-integrated engineering
CIM computer-integrated manufacturing
CLCC ceramic leadless chip carriers
CMOS complementary metal-oxide semiconductor
Comm. communications
CPS characters per second
CPU central processing unit

D
D/A digital to analog
DAC digital to analog converter
DBMS data base management system
DC direct current
DFT design for testability
DIAC bidirectional trigger diode
DIL dual in-line
DIN Deutsche Industrie Normenausschuss
DIP dual in-line package
DPM digital panel meter
DRAM dynamic RAM
DTL diode transistor logic

E
EDA electronic design automation
EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EIA Electronic Industries Association
EMC electromagnetic compatibility
EMI electromagnetic interference
EMP electromagnetic pulse
EPROM erasable programmable ROM
ESR equivalent series resistance

F
FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G
GaAsFET gallium arsenide FET
CMIP commn management information protocol
GPIB general purpose interface bus
GPS global positioning system

H
HF high frequency (3 to 30 MHz)
HIPOT test, measurement, and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I
IAB Internet Activities Board
IC integrated circuit
IDC insulation displacement contact
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared
ISDN integrated services digital network
ISO International Standards Organization

J
JEDEC Joint Electronic Device Engineering Council
JFET junction FET
JMOS junction MOS

K
kHz kilohertz (10^3 hertz)
KSR keyboard send /receive

L
LAN local area network
LC (filters) inductance/capacitance
LCC leaded chip carrier
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LIF low insertion force
LNA low noise amplifier
LNB low noise band
LSI large scale integration
LVDT linear velocity displacement transformer

M
MASER microwave amplification by stimulated emission of radiation
MATV master antenna television
µF microfarad
MHz megahertz
MIC microwave IC
MIPS million instructions per second
MIB microcomputer interface board
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor FET
MOSIGT metal oxide semiconductor insulated-gate transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N
NBS National Bureau of Standards
NEMP nuclear electromagnetic pulse
NIM national instrumentation module
NOR not OR
NTC negative temperature coefficient

O
OCR optical character reader
OEM original equipment manufacturer
OR a logical operator
OSI open systems interconnection

P
PAL programmable array logic
PC printed circuit
PCB printed circuit board
PCM pulse code modulation
PCS plastic clad silica
pF picofarad
PGA pin grid array
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PLCC plastic leaded chip carrier
PLL phased lock loop
PPI plan position indicator
PROM programmable ROM
PTC positive temperature coefficient
PUT programmable unijunction transistor

Q
QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R
RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S
SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SCS silicon-controlled switch
SDA source & detector assemblies
SGMP simple gateway monitoring protocol
SIDAC bidirectional voltage-triggered switch
SIMM single in-line memory module
SIP single in-line package
SMD surface mount device
SMT surface mount technology
SNMP simpole network management protocol
SO small outline
SOIC small outline IC
SOT small outline transistor
SSI small scale integration
SSR solid-state relay
STL Schottky transistor logic
SUS silicon unilateral switch

T
TC temperature coefficient
TCE thermal coefficient of expansion
TXCO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC bidirectional AC switch
TTL transistor-transistor logic
TTY teletypewriter

U
UHF ultra high frequency (300 MHz to 3 GHz)
UJT silicon unijunction transistor
UL Underwriters Laboratory
UPS uninterruptible power supply

V
VAC volts (of) alternating current
VAN value-added network
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency (30 kHz to 300 MHz)
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VME virtual machine environment
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W
WPS word processing software

Y
YIG yttrium iron garnet

Z
ZIF zero insertion force

The industry's most complete line of advanced technology

Brief Highlights

IGBT
High frquency capability
1.7 VCE (Sat) available
Rugged RBSOA
Single, dual and 6-pack
600V, 1200V and 1400V
8A to 600A

Darlington Modules
Z-Series - Highest performance available
M-Series - Very high hFE 750-2000
Single, dual and 6-pack
600V to 1400V
30A to 400A

Diode Modules
3-Phase and dual
Fast recovery available
Reliable power design
100V to 1600V
30A to 250A

Discrete MOSFETs TO-3P, TO-220 & Surface Mount Pkg. 30V - 1000V, 2A - 50A
- F-I SERIES, Low $R_{DS(ON)}$
- FAP-I SERIES, Low $R_{DS(ON)}$, High Avalanche Rugged
- FAP-II SERIES, $V_{GS} \pm$ 30V, Reduced Turn-Off Time, High Avalanche Rugged
- F-III SERIES, Logic Level Operation, Low $R_{DS(ON)}$
- FAP-IIIA SERIES, Logic Level Operation, Low $R_{DS(ON)}$, High Avalanche Rugged
- FAP-IIIA SERIES, ***Automotive Types -*** Logic Level Operation, Low $R_{DS(ON)}$, High Avalanche Rugged
- F-V SERIES, FREDFET, Diode Recovery Time (150-200 nsec) Improved Turn-on Loss

Switching Transistors
TO-220AB, TO-220F, TO-3P, TO-3 pkgs.
50V to 1000V; 3A to 30A

High Voltage Diodes
1kV to 30kV

Surface Mount Diodes
Schottky, Ultra-Fast, Fast Recovery, GP
40V to 600V; 500mA to 20A

Schottky Rectifiers
Axial, TO-220, TO-3P and Surface Mount
Singles and Duals
45V, 60V, 90V
0.6A - 60A

Also from Collmer: HV Power Supplies, Multipliers, Diode-Rectifier Assemblies (see Sec. 4000)

POWER MODULES

SERIES L

15-42.5 AMP, SCR/DIODE MODULES, LOW PROFILE, DESIGNED FOR PRINTED CIRCUIT BOARD CONNECTIONS

Circuit Modules provide ratings up to 42.5 amps in a low profile package designed for printed circuit board connections. Available in three standard bridge circuits and an AC switch version, all models have 2500 Vrms isolation and are UL recognized (file no. E72445).

ELECTRICAL SPECIFICATIONS

SYMBOL	SPECIFICATION	RATINGS		
		L3	L5	L6
I_D	Maximum DC Output Current @ T_C = 85°C (A)	15	25	42.5

CRYDOM COMPANY

POWER MODULES

SERIES EF

50-170 AMP DIODE, SCR/DIODE MODULES, HIGH THERMAL EFFICIENCY, COMPLETE POWER CONTROL CIRCUITS IN A SINGLE PACKAGE

These circuits provide complete power control in a single package, utilizing high thermal efficiency to assure long life and reliable performance. Twelve standard models provide 2500 Vrms isolation from all terminals to ceramic base and are UL recognized (file no. E72445).

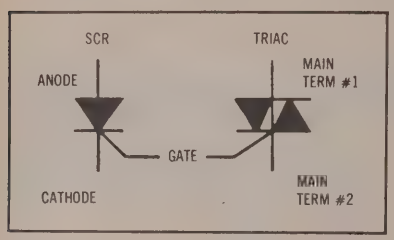
MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors*. Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

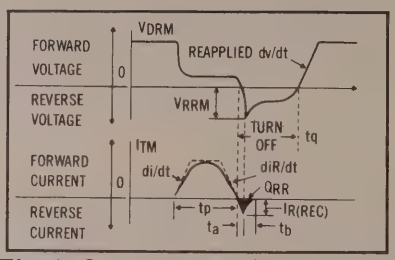


Fig. 1. Concurrent voltage and current waveforms

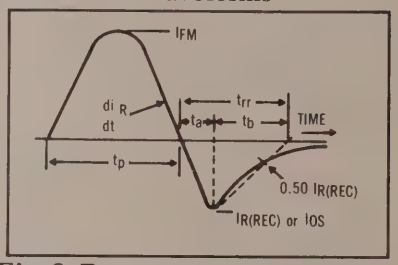

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$; *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature.*

$T_{J(MAX)}$: *Maximum allowable junction temp.*

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

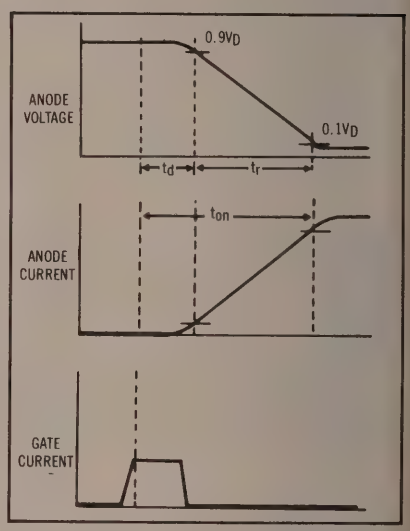

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time.* Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

t_r: *Rise time*. Time between principal voltage dropping from one value to a second lower value when thyristor turns from OFF to ON. (Fig. 3)

t_{rr}: *Reverse recovery time*. (Fig. 2)

V_{DRM}/V_{RRM}: *Maximum repetitive peak OFF state/reverse voltage* excluding non-repetitive transients.

V_{DSM}/V_{RSM}: *Maximum nonrepetitive peak OFF state/reverse voltage.*

V_{FM}/V_{TM}: *Maximum forward voltage drop* at a specific forward current and case temp.

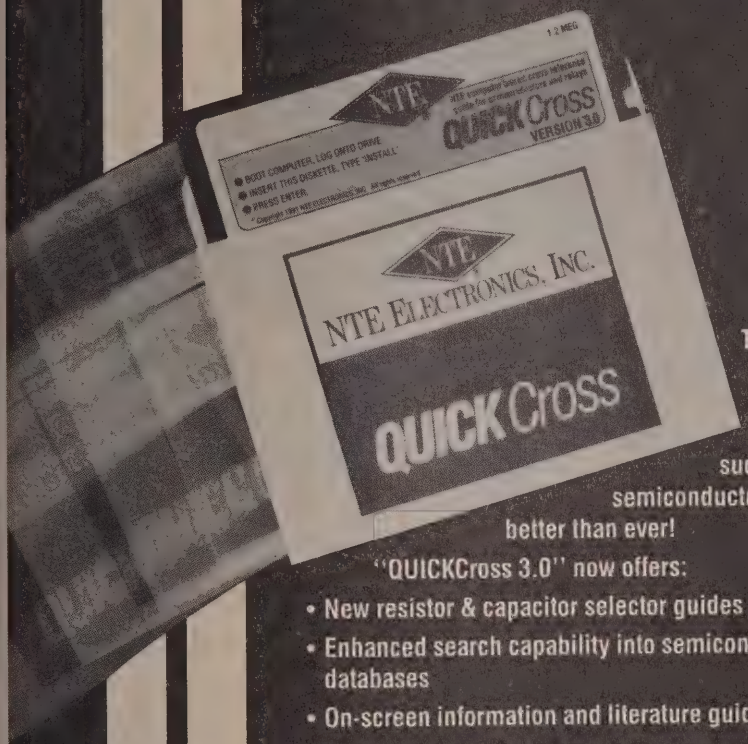
V_{GDM}: *Gate nontrigger voltage*. Highest dc voltage that will *not* cause thyristor to switch from OFF to ON.

V_{LATCH}: *Latching voltage*. Voltage required for thyristor to latch ON at a given gate current and junction temp.

$V_{TM(DYN)}$: *Dynamic ON state voltage*. Transient ON state voltage of thyristor when triggered into conduction for a given load and time.

FROM A TO Z IN 1 SECOND FLAT

THE FASTEST, EASIEST CROSS-REFERENCING OF ORIGINAL DEVICES TO NTE REPLACEMENT PARTS!



NEW UPGRADE!

QUICKCross™ 3.0

The industry's first PC-based software cross-reference to NTE's highly successful line of semiconductors and relays is better than ever!

"QUICKCross 3.0" now offers:

- New resistor & capacitor selector guides
- Enhanced search capability into semiconductor and relay databases
- On-screen information and literature guide

Just type in any of a quarter of a million industry device numbers — U.S., Japanese, and European — and you'll get the ideal replacement from over 4,000 NTE devices in about one second!

"QUICKCross 3.0" 5¼" and 3½" floppy diskette MS-DOS versions are available for under $10 direct from NTE or through your local NTE distributor. For your nearest one, call NTE toll-free 1-800-631-1250 (including Canada) or (201) 748-5089. FAX: (201) 748-6224.

QUICKCross™ 3.0

"QUICKCross" 3.0" software runs in MS-DOS on any IBM PC or compatible with 640K of RAM, a small hard drive, and a 5 1/4" or a 3 1/2" floppy drive. NTE's database occupies only 2.5 Mbytes of hard disk space when loaded. It is a public domain release. MS-DOS is a registered trademark of Microsoft Corporation. IBM is a registered trademark of International Business Machines.
